Lag Switch

[READ HERE](#)

Lag Switch Info

Spoiler [\(Click to View\)](#)

In the peer-to-peer gaming model, lagging is what happens when the stream of data between one or more players gets slowed or interrupted, causing movement to stutter and make opponents appear to behave erratically. By using a lag switch, a player is able to disrupt upload from the client to the server, while their own client queues up the actions performed. The goal is to gain advantage over another player without reciprocation; opponents slow down or stop moving, allowing the lag switch user to easily outmanoeuvre them. From the opponent's perspective, the player using the device may appear to be teleporting, invisible or invincible, while the opponents suffer delayed animations and fast-forwarded game play, delivered in bursts. Some gaming communities refer to this method as "tapping" which refers to the users "tapping" on and off their internet connection to create the lag.

The term "lag switch" encompasses many methods of disrupting the network communication between a client and its server. One method is by attaching a physical device, called a hardware lag switch, to a standard Ethernet cable. By flipping the switch on and off, the physical connection between the client and the server is disrupted. The designers of Video game console hardware have started to introduce built-in protection against lag switches in the form of voltage detectors, which detect a change in voltage when the switch is flipped. Some manufacturers have taken counter measures to bypass or trick this detector. This can also be achieved by simply unplugging the Ethernet cord going to the client, causing a disruption in the player's internet connection. Other methods, called a software or wireless lag switch, involve using a computer program. In this method, the cheater runs an application on a computer connected to the same network as the client. The application hogs the network bandwidth, disrupting the communication between the client and its server. However, one cannot do this for an unlimited amount of time. Usually, having no internet connection for 30 seconds will cause one's character / player to be kicked from the game due to inactivity / no internet connection.

In the peer-to-peer gaming model, lagging refers to a player with a faster connection flooding an opponent(s) using a basic denial-of-service attack outside the game structure.

**Arnette Rene** - July 4, 2014, 2:24 am

Awesome OP! thanks for the free release <3

**CDNPiper** - July 4, 2014, 3:03 am

Urh went to download it and then this happened

<https://gyazo.com/bfe3f597b54f1a54ea580b94a4e8bccd>

**PM\_ME\_YIFF\_PICS** - July 4, 2014, 4:13 am

<https://gyazo.com/bfe3f597b54f1a54ea580b94a4e8bccd>

Chrome automatically does this with a lot of files, it doesn't necessarily mean it's infected. Not vouching or anything for OP, just putting it out there.

**RegretfulSIN** - July 4, 2014, 5:28 am

What does a lag switch actually do?

Does it just make you lag when you want to or something?

If so, it sounds like a retarded program to use :S

**ZooSTARtt** - July 4, 2014, 5:50 am

Can this get you vac ban? and what excatly does it do

**Vamporno** - July 4, 2014, 5:52 am

(Jul 4, 2014 05:50 AM)ZooSTARtt Wrote: [\[CITE\]](#) Can this get you vac ban? and what excatly does it do

If you play COD games and you're host you can use a lagswitch to lag the players to kill them easier.

**qNxX** - July 4, 2014, 6:56 am

(Jul 4, 2014 05:50 AM)ZooSTARtt Wrote: [\[CITE\]](#) Can this get you vac ban? and what excatly does it do

The application hogs the network bandwidth, disrupting the communication between the client and its server.

^ That is exactly what this application does. You won't get VAC banned for it.

leo\_dev\_fr - July 4, 2014, 7:36 am

Does it work on CSGO ? And what's are the risks ? thanx in advance :)

CC\_AnoN - July 4, 2014, 7:39 am

Yes it work to csgo and

<https://hackforums.net/showthread.php?tid=4321315&pid=41050012#pid41050012>

joneh heil - July 4, 2014, 7:40 am

Cool! Will absolutely try this, thanks!

leo\_dev\_fr - July 4, 2014, 7:44 am

For overwatch, it can be bannable ? if someone see us teleporting xD

ZooSTARTt - July 4, 2014, 7:59 am

Has anyone used this or tested it out? Can anyone vouch

LustWare - July 4, 2014, 8:24 am

tried this on csgo, made my screen freeze couple of seconds, probably not a good idea to use this on csgo

RegretfulSIN - July 4, 2014, 8:24 am

I guess I must be the only person on hackforums that has asked a question that google might be able to answer - oh no, wait, I'm not.

Don't know why you're such an ass.

That's the whole purpose of it. If freezes your screen and buffers all actions you perform until you turn it off.

Does it freeze everyone? can this be seen on overwatch?

LustWare - July 4, 2014, 8:38 pm

(Jul 4, 2014 06:19 PM)Theodore T-bag' Bagwell Wrote: [\[CITE\]](#) Does it freeze everyone? can this be seen on overwatch?

it only freezes YOU, and you are unable to do anything while frozen.

useless.

leo\_dev\_fr - July 5, 2014, 10:16 am

any positive feedbacks ? it only freeze the screen ? .....

CDNPiper - July 5, 2014, 10:36 am

Tested this out its pointless it just freezes you and you are unable to move

dufflez - July 5, 2014, 8:31 pm

so it doesnt do this? <https://www.youtube.com/watch?v=I5QyNA6H6rY>

**LustWare** - July 5, 2014, 9:24 pm

(Jul 5, 2014 08:31 PM)dufflez Wrote: [\[CITE\]](#) so it doesnt do this?  
<https://www.youtube.com/watch?v=I5QyNA6H6rY>  
no it doesnt, it freezes your screen and you cant do shit.

**chowmaine** - July 5, 2014, 11:08 pm

oh dear, let the havoc begin, thanks for the share though!

**crackz** - July 5, 2014, 11:11 pm

gonna test this on CoD4 i will update my post when i have

**xploD** - July 6, 2014, 3:34 am

Pointless, a proper lag switch makes you lag on another screen and messes up your hatboxes. But your own screen is fine and are able to hit others normally.

**Hu??n?TeR?** - July 6, 2014, 3:40 am

This works quite well for me, doesn't freeze my screen at all. Using this in CSGO btw.

**?homas** - July 6, 2014, 3:44 am

Looks sick as hell man thanks for the free release. :?

**Josh?** - July 6, 2014, 3:49 am

Going to assume the people who are completely freezing don't have a powerful enough PC to use this...

**LustWare** - July 6, 2014, 6:54 am

(Jul 6, 2014 03:49 AM)?Proddy<sup>3</sup> Wrote: [\[CITE\]](#) Going to assume the people who are completely freezing don't have a powerful enough PC to use this...  
dumb assumption.

this has nothing to do with your pc -.-

and FYI, i had 3 people on my net playing a comp match,

we all froze and our teammates said we froze and didnt move.

**ihatevim** - July 6, 2014, 8:44 am

Lol it's not strong enough for me, network utilization goes to 99% but I still dont lag up in game.

**calvv** - July 6, 2014, 9:45 am

(Jul 6, 2014 08:44 AM)Schwagstika Wrote: [\[CITE\]](#) Lol it's not strong enough for me, network utilization goes to 99% but I still dont lag up in game.  
same thing for me haha, and OP you should probably change the font to something that everyone has installed on their computer..

**CC\_AnoN** - July 14, 2014, 7:07 am

I started to make a v2!

[+]You can decide how much to lag and i add  
[+]More powe

[+]Fix the fonts

If you have any ideas just post it.

**LegitRetard** - *July 14, 2014, 10:33 am*

Stops responding when i press F =( I ran as admin

**fameAssBurger** - *July 15, 2014, 4:41 am*

how i can do this in vb.net? I got experiment lot so i know what to do

**lolz10000** - *July 15, 2014, 6:04 am*

Doesn't work you just stand still on csgo. It should work well in any cod game if you are host.

**Prosto11** - *March 10, 2020, 8:33 am*

link doesn't work , Re-upload .
