Thread: [\[Tut\]How to shutdown/restart other computers on your network/wi-fi\[tut\]](#)

Hastur - July 5, 2014, 2:04 pm

Hello all Hackforums members, today I'll be showing you how to shutdown/restart other computers through your network/Wi-Fi.

1st

You will need to open cmd by typing cmd in the start meny search.

2nd

Make sure your connected to your internet connection.

3rd

In cmd type in NET View and then hit enter.

4th

then type in typing ping (space) and the computer name that you wish to target.

5th

once that is complete type in shutdown -i then hit enter.

6th

A screen will appear, click add computer name and type in the ip adress that is brackets.

7th

Select what you want to, that the computer will shutdown or restart and then ok.

You can choose if it will be an unexpected shutdown or a worring message for an_ amount of seconds they have left to save whatever they need to save.

Knowledge Is Free.??

If you liked the tutorial please leave some resond In the comment section bellow!

This is pretty cool. thanks for sharing OP

Minimal - July 6, 2014, 1:49 am

This will only work if you have shutdown privileges on the remote computer... I also don't understand why the ping is there, if the target is visible from net view then it is obviously online...

Cause then you get the computers that Is connected to your network. You simpley get their name so you can shut them down. You need to type ping in there otherwise you won't find out their computer name.

No problem mate! ??

°FIRE° - July 6, 2014, 4:46 am

Can Phones work? Please let me know :)

Hastur - July 6, 2014, 7:30 am

This method do not work on phones I'm sorry. It will only work if they got a computer.?

Clandestine . - July 6, 2014, 9:08 am

But wouldn't you need shutdown permission?

?ã?ž?@ - July 6, 2014, 9:12 am

i got access is denied error doesnt work for me

Polarize - July 6, 2014, 9:12 am

This will benefit those who get free wifi in coffee shops

inf3rno - July 6, 2014, 12:01 pm

pretty nice method dude :)

does this work in those free wlan networks?

jonnnas - July 6, 2014, 12:42 pm

Hey,

this command works only if you have some permission (Adminuser + password) of the remote pc...
Otherwise you get -> access denied...

Jonnnas

AceVoid - July 7, 2014, 2:12 am

I'll try it out some time. If it does work without you needing to know the Adminuser and password of the remote PC, it's epic.

Also, love your avatar OP.

balmohan - July 7, 2014, 8:08 am

I am getting access denied message again and again

Trev_ - July 7, 2014, 10:14 pm

Ty for this. Working great for messing with people that visit. <3

D3x73r - July 10, 2014, 10:20 am

Very nice tut for making angry my bro on laptop :)

I'm glad you liked it.

This is very very basics.?

misterbond - July 21, 2014, 2:07 pm

Nice tutorial, definately going to try this out.

Yazeed98 - July 21, 2014, 3:12 pm

when i hit Net view

it say's ""System error 6118 has occurred.

The list of servers for this workgroup is not currently available""

Trivan - July 21, 2014, 6:29 pm

Good Tutorial, will try out later. Thanks!

MasqueradeUnknown - July 21, 2014, 9:26 pm

I've seen many posts about shutting down people on the same network, but good tut.

Isn't this method only available through LAN and not over WIFI? ?

All_Out_War - July 23, 2014, 5:19 am

can someone teach me how to get privilege on my sister laptop so that i can remotely shutdown her laptop. haha

DotPSD - July 23, 2014, 6:03 am

I'll keep this in mind for when I go back to school, can't wait!

titaneo - July 23, 2014, 6:14 am

Nice tutorial thanks for sharing. I might use this as mischief at school.

I am pretty sure it will only work if they got a windows computer and you have remote shutdown privileges
