Thread: [Pyro Stresser | "Cyro Stresser" but actually working](#)

Psychogenic - July 5, 2014, 10:08 pm

Okay, well many of you saw this [thread](#) of "Cyro Stresser" which many people seemed to take interest in.

Unfortunately since it was fake, nobody actually got to receive the nifty little tool.

So, I've recreated it. And yes, it's a little buggy so just deal with it.

Download it here:

<http://ge.tt/8i2a6Sn1/v/0?c>

Virus scan here:

<https://www.virustotal.com/en/file/59241b9cac5790c447b66020333ebe489a3a23967074239cd786ebd19af842a/analysis/1404623206/>

For some fucking reason, almost all of my releases have a load of false positives. If anyone could tell me how to get rid of those fucking things, hit me up with a PM. But yes, those are all false positives. If you don't trust me, don't download and don't bitch.

hmmm, The Stresser started Doing errors for some reason, Even tho the ip is right and everything. Do you know why?

Ravensfan75 - July 15, 2014, 3:13 pm

Awesome! I just took down a home connection in about 2 minutes!

hakenz - July 16, 2014, 10:14 am

It doesn't even work... it freezes, then it crashes. Or it just freezes and errors keep popping up.

KNOWLEDGE - July 16, 2014, 10:25 am

Nah, that's a rat. There's another program running in the background "WerFault.exe".

Great one, skid.

I ran the program and did not have the application show up. Please confirm that it was associated as a RAT before posting. The most I got was a remote connection error, which probably means the attack server is offline.

Doesn't .exe booters run off you bandwidth like if you have 50mb's download and 15 mb's upload it will be a 15mb's booter?

VIRUZ - July 19, 2014, 9:05 pm

I apologise for grave digging here, but "werfault.exe" isn't a RAT, but a windows process that appears when something wrong happened and the program isn't responding...

MineCraftLoverz - September 13, 2014, 6:48 am

Can anyone confirm this program is not a virus of any sorts?

Jackel666 - September 15, 2014, 12:04 am

Omfg , Please learn what you are talking about before talking shit. If anything you are the skid in this context.

The RooT - September 16, 2014, 5:54 am

I wouldn't be calling people a skid when you obviously don't know what your talking about..."WerFault.exe" Is a program for windows error reporting feature. You can look it up yourself. probably an error in the program caused it. Dont come on here acting like a hero bcz you found one process you thought was suspicious... you look like a total dumbshit.

No shit dude, i mean c'mon...use your brain. Tools like LOIC, FireFlood, Dark DDoSer and HOIC all came up as a virus...wanna know why? Bcz they use your computer's internal memory and they use shells... which most AV's associate with backdoor. Correct me if im wrong here but None of the DDoSers i listed above actually hurt anybody's pc, and im pretty sure this one is just as harmless. Stop being so paranoid.

I vouch for this program, props to UnOfficialCryptic...keep it up man ?

jacem49 - December 3, 2014, 2:48 pm

I may be a newbie, but I vouch for this, been using it for awhile now, no problems at all, great share OP!

Nero-- - December 5, 2014, 9:03 am

Dosen't work 12/05-14..... It looks good but unfortunately it doesn't work. I got an error. Is it just me? Or is the stresser outdated?

OTRKendo - December 6, 2014, 2:41 am

MrTurtle77 - December 31, 2014, 9:47 pm

I may be wrong, but I believe a program called wine would allow you to do this.

Try this: <https://www.winehq.org/>

mechic123 - January 1, 2015, 2:32 pm

I highly doubt this works, there's probably no API or real power connected to it. But thanks for giving to the community I guess.
