Thread: [Which Keylogger option is the best?](#)

unoquepasaba - July 6, 2014, 5:55 am

I'm If the best Keylogger option.

. My target PC (only one) is gonna be far away from me for almost 1 year. I need a Keylogger over this pc for 1 year.

. I can access to my target PC today and tomorrow phisically, after this I won't be able to access the target pc (manually-phisically or remotely)

. I got a max. budget of 80 usd. With this budget I need a stuff which would work for so much months being FUD (I don't mind use a crypter, the requirement is being FUD for a long time 'cause I'll have no access to my target pc for so long)

I'm pretty new on hax but I think I can handle whatever if it is relatively user-friendly.

My quick research have listed the following candidates:

- A) Predator Pain v14 -> 25 usd (it scare me the point about it'd run for less than 2 months... lol)
- B) StRaXD Keylogger -> free
- C) Syslogger -> free
- D) <http://www.keyloggers.com/> -> one of listed there.
- E) Ardamax Keylogger -> 45 usd
- F) Others

For good crypters I've seen:

- A) EasyProtect
- B) RazorCrypt
- C) Others

Recommendations? I would need a good answer for today max. Hope you could help me guys.

Use a free keylogger (Syslogger is quite a good one for it being free) and then crypt it using a good crypter (some are quite good quality for their price and can be found here:-
<https://hackforums.net/forumdisplay.php?fid=126>). Good luck :~)

Mr.Ze - July 6, 2014, 8:41 am

Ardamax Keylogger 4.2 Cracked - I have it. Free.

Award Keylogger 3.2 Patched - I have it. Free.

PM me for any of the two.

And just buy a good crypter - any of the ones being sold. Or wait for LaCrypt 3.0 - free, comes out tomorrow.

Actually, if you need help setting it up, or want a custom one, PM me.

You can also try to use Aux Logger if none of those loggers works.

blakewitt - July 7, 2014, 3:25 pm

Try Dracula logger, feature rich and easy to use. Works pretty well for me and it's free. I believe it's here on the forum somewhere

you'll have to use a rat of course keylogger can't work for that much time period if other people are going to use that computer.

Use darkcomet rat & buy any good crypter like cyberseal or byte crypter.

unoquepasaba - July 8, 2014, 7:20 am

Could be an option installing Darkcomet or any other good rat and at the same time use a good keylogger like syslogger?
