Thread: [\[source\] AdFly Mass Link Shrinker](#)

Rawrrasaurus - July 12, 2014, 7:20 pm

I have never released any source here, so I figured I would release a bit of code I found while going through some old projects. This is a simple AdFly Link Shrinker I put together from said code. It is multi-threaded using the Parallel class, so I thought some beginners could use it as an example. I do not use anything like this myself, but I tested it and it seems to work fine (Could use some exception handling, improvements...etc). Anyway, here ya go!

Clean and functional. It's nice to see someone post examples using a third-party API.

abdouaniba - May 14, 2019, 11:36 am

Thank you for this app, but i remember i had one i only paste and copy i didnt need to save a text file if i want to paste, there is nay updates!!?

Best regards
