Thread: [\[TUT\]Get .info domain for free\(Easy\)\[TUT\]](#)

sknepal - May 22, 2010, 12:17 am

Hey there mates. This is not actually a hacking tutorial. But, I guess, since most people browse this section, it might come to the knowledge of all. A thread regarding it was created by [Periodic](#) in the hosting section but it has died just like that. He is the one who brought it to my knowledge. So, cheers for him. And thanks to [Shadaw](#) for providing me with the information required (Address).

Now, here's what you need to do.

1. Go to <http://www.freeproxylists.com/uk.html>
2. Grab a UK proxy.
3. Go to <http://www.freeola.com>
4. Register there.
5. Visit [HERE](#)
6. Click on the button that says "Login and choose my free domain"
7. Choose your free .info domain and enter the information required. (Lookup [fakenamegenerator](#) or google for the address thing.)
8. Wait for some hours. (It took around 30 hrs for me, but it depends)
9. You'll get the mail in your mail box. Enjoy.

Thats it. So simple. Remember, the offer is only meant for UK citizens and one domain per household. Thats why we are using a UK proxy. If they find you suspicious, you won't get it. But, I don't think they'll know that. No worry. And yes, you can change Name Servers as well. ?

Domain lasts for a year. Offer Valid Till 30th of June or when the domain giveaway limit has been reached, whichever comes first. Hurry !

Don't forget to say thanks if it helped ya.

Good Luck getting it. ?

Use different Email this time and Use Proxy from a different site. Just google for one. Since, most of the people tried proxy's from that site, it could've been already used. You have to wait for the site to get new proxies (it happens regularly in 24 hrs., i guess) or go for another proxy site. Thank you. And please clear you cookies too. ;)

This is meant only for UK citizens. So we need a UK proxy, so that we aren't detected as a Non UK ones. I have no idea whether they accept you or not. And you cannot rep me, only subscribed ones can. ;)

To everyone, who tries to register a new domain for second or more time :

Please clear your cookies, login info, history and everything. Use different proxy, email and Password.

And then try it. I just applied for second time. I got notification saying something lyk this ip has already registered so I cleared up the cookies and it worked. Just applied. Lets see whether I'll be accepted or not. Good Luck to ya all. Enjoy ;)

(May 23, 2010 12:23 AM)sufarman1 Wrote: [\[CITE\]](#) i use firefox because internetexplorer its working very slow

Then on firefox, go to Tools > Options > Advanced > Network. And on connection field, click on Settings. Choose the Option "Manual Proxy Configuration". Enter your proxy in Http Proxy and Port No.in the Port Field. Put a tick mark on "Use this proxy server for all protocols." Click Okay. Thats it.

Now, to check whether you have succesfully changed your IP, go to <http://www.ip-adress.com> and see whether it says you are from UK or not. If it says, then you're done.

So, whenever you perform tasks related to freeola do not forget to do this.

Thank You!

Zubb - May 23, 2010, 1:24 pm

Nice tutorial but..

1. You don't have privacy enabled, which means WHOIS lookup will always be easy for a dox.
2. You only get 1 years free (usually) free domain then you need to pay, and if you don't pay then they take it automatically out of your debit account unless you cancel it.

3. This wouldn't be for a serious website. And you still have to pay for the hosting? free hosting is worthless.

1. You don't have privacy enabled, which means WHOIS lookup will always be easy for a dox.
2. You only get 1 years free (usually) free domain then you need to pay, and if you don't pay then they take it automatically out of your debit account unless you cancel it.
3. This wouldn't be for a serious website. And you still have to pay for the hosting? free hosting is worthless.

Please do read carefully, they don't ask for any info regarding your CC, Debit or anything else. You don't need to pay for hosting, transfer the site to free web hosts. And yeah, Privacy is not disabled, then look up for a good free web host that allows you to enable privacy setting and transfer the domain.

Well, try proxy from a different site. As most of the users are using same site for getting proxy, it might have happened. Also, clear your browsers cookie info, cache, login and use a different site and mail address for each different sign up. I have tried 3 times, got it at first time but failed for last 2. I'm thinking of trying it once more. Good Luck!

Dude, you need a private kind of proxy now. Most of the people here, use the proxy from the same site so obviously they will deny you. Btw, I had registered the domain before I made a thread here. After making thread, I tried twice and was denied both the time. So, see even I am not able to do it. Its up to your googling power. hehe...Some people have still got the domain coz they used different uncommon proxy. I could have helped ya for sure but there's nothing more I can do. Sry.
