Thread: [FreeDNS | Your DNS not working when you run? Look here \[Tutorial\]](#)

5 Cents - July 17, 2014, 12:35 am

Ok I've seen a lot of information on this forum about freeDNS. I believe there is users on this forum who are experiencing this problem but have no idea on how to solve it, and therefor unable to sync your FreeDNS to your IP. So today I will show you how to sync your freeDNS easy and make sure it will be 100% working.

If you followed this tutorial linked here: [\[TUT\] How to setup a Dynamic DNS for RAT \[An Alternative to no-IP DNS\] with Pics](#)

Credits go to [Jinu](#) from Redlions.

This tutorial explains the basics on how to setup, and all is correct. But I've made this tutorial thread just to clear one problem up.

Some users are currently experiencing problems with FreeDNS and why it doesn't work. Thats because the w-get scripts aren't connecting to the wget installer correctly, there for corrupting the syncing process when you run the w-get scripts. So this tutorial will fully explain how to get this problem solved, and make sure your FreeDNS is 100% working.

1) Follow the tutorial I've linked above.

2) Once complete follow the 3rd step

3) When you followed the tutorial you downloaded a program called GnuWin32 (Wget installer) this program will help your w-get run. So you can get your DNS 100% working. If you don't have it yet, here is the link to it.

http://sourceforge.net/projects/gnuwin32/files/wget/1.11.4-1/wget-1.11.4-1-setup.exe/download?use_mirror=softlayer-dal

4) Download the w-get scripts (If you have then great)

5) Copy the .bat file (w-get scripts) and paste it them into the Gnuwin32/bin directory on your main driver, or where ever you installed GnuWin32 to, and find that directory.

Then find the bin directory.

And copy and paste the .bat file into there.

6) From there run the .bat file in your bin directory (w-get scripts) and it should work for you.

Also just a hint to see if there is any errors while running the DNS, go to the directory you pasted the .bat file into, and right click > edit.

The last line where I've written the command "Pause" choose to have that. So when you run your .bat file it should say this if you're successful to run.

PHP Code

```
<?php
```

```
C:\Program Files (x86)\GnuWin32\bin>wget -q --read-timeout=0.0 --waitretry=5 --tries=400 --background http:
```

```
//freedns.afraid.org/dynamic/update.php?abcdefghijklmnopqrstuvwxyz SYSTEM_WGETRC = c:/progra~1/wget/etc wgetrcsyswgetrc = C:\Program Files <x86>\GniWom32\etc\wgetrc
```

```
Continuing in background pid 2532.
```

```
Output will be written to 'wget-log.10'.
```

```
C:\Program Files <x86>\GnuWin32\bin>pause
```

```
Press any key to continue...
```

After that hit any key and your DNS is now successfully sync to your DNS with no problems. I hope this clears up a lot of HF users problems when trying to get FreeDNS to work. As this problem is the major problem some users face.

So thank you for reading :)

LOLdropper - July 20, 2014, 2:58 am

Seems a nice tutorial buddy would try it out though Free DNS is working perfectly for me.

justmatty - July 20, 2014, 4:08 am

Thank you very much for this tutorial!

Is this only if you have changed your IP, however?

5 Cents - July 20, 2014, 4:41 am

(Jul 20, 2014 04:08 AM)justmatty Wrote: [\[CITE\]](#) Thank you very much for this tutorial!

Is this only if you have changed your IP, however?

Nope it isn't. This tutorial is just to show how to make sure FreeDNS is 100% working.

Oliver Sykes - July 20, 2014, 5:12 pm

Weird. This tutorial made me doubt that it was setup right, and I happened to find it the day I went somewhere else with my laptop. Then When I pinged it in cmd, it showed the former ip. Though, I got it to work with an online pinger. Time to infect myself :D

AAAAAAndDarkComet betrays me. I don't like FreeDNS xD

twollybangin - July 20, 2014, 6:40 pm

You know you could just use a freedns update client ;

<http://freedns.afraid.org/scripts/freedns.clients.php>

L4MER_N3WBY3 - July 23, 2014, 9:35 am

very helpful solved my problem thx you very much !

ariz0nax - July 25, 2014, 4:15 pm

very helpful tutorial , solved my problem thank you very much !

Arcanine - July 25, 2014, 5:11 pm

Nice tutorial will help the noobs witch are new to R.A.Ting.

5 Cents - July 26, 2014, 6:57 pm

Glad this is helping people solve this DNS problem.

dawsonj33 - July 30, 2014, 12:21 pm

I dont have a bin folder in mine.. How did your bin appear?

5 Cents - July 30, 2014, 5:07 pm

(Jul 30, 2014 12:21 PM)dawsonj33 Wrote: [\[CITE\]](#) I dont have a bin folder in mine.. How did your bin appear?

You have to install Gnuwin32, and make sure you installed it to your C drive in programs files.

Best post/comment in this thread. Thank you very much.

DOXEDLoI - July 31, 2014, 4:06 pm

I think this has helped! Looks promising :), thanks! However, what do you mean by: Also just a hint to see if there is any errors while running the DNS, go to the directory you pasted the .bat file into, and right click > edit.? Where's the edit button xd.

OMFG. THIS WORKS. I AM SO HAPPY. DAUIFNSDUIFUISBDUFBUSDFUIDIG <3 <3.

loveislove - August 14, 2014, 5:14 pm

not work for me i didnt find directry i install software and tired to doing all tut :(help me plz arsh.khan.01

andreyinho - August 15, 2014, 3:59 pm

at last step when i click edit and see in that http appear ERROR: Address xxx.xxx.xxx.xxx has not changed.

PoisonousHammer - September 8, 2014, 1:08 am

good job!excellent and very useful guide...

Indahood - September 11, 2014, 12:42 pm

Thanks for the tutorial but it's more easy to use Afraid service Updater :)

iKick - September 11, 2014, 1:40 pm

This is a proper tutorial but you can also just click the Direct URL on the Dynamic DNS page of FreeDNS

Indahood - September 13, 2014, 4:34 am

I need help I have bots connected to different IP I mean when I log on to my vpn I have bots who connects and disconnects when I leave the vpn

Cryptic Blue - September 19, 2014, 11:00 am

(Sep 13, 2014 04:34 AM)Indahood Wrote: [\[CITE\]](#) I need help I have bots connected to different IP I mean when I log on to my vpn I have bots who connects and disconnects when I leave the vpnIs there a feature to right click and update your bots on your current ip address?

iKick - September 19, 2014, 11:54 am

(Sep 19, 2014 11:00 AM)Cryptic Blue Wrote: [\[CITE\]](#) Is there a feature to right click and update your bots on your current ip address?

What do you mean by "update your bots on your current ip address"?

If you mean update your DNS's IP, you can do so by clicking the Direct URL link on FreeDNS or use the DUC from no-ip.

Cryptic Blue - September 21, 2014, 9:17 am

(Sep 19, 2014 11:54 AM)iKick Wrote: [\[CITE\]](#) What do you mean by "update your bots on your current ip address"?

No problem, glad I could help you ?

?ikism? - October 6, 2014, 7:59 am

Is it enough to run the bat one time, or do I have to run it each time I RAT?

joneh heil - October 12, 2014, 5:38 am

I still get ERROR: Address LEL NOPE has not changed.

hello im me - November 3, 2014, 7:22 am

Still don't work for me ?

?eumonic - November 3, 2014, 11:30 am

Anyone who is getting the message "ERROR: Address <your ip here> has not changed." is doing it correctly. That is a good message response from FreeDNS. It means that your old IP and new IP are the same IP and it does not need to change anything on it's end. There is not a problem there.

TrojanRAT - November 26, 2014, 10:22 pm

Umm... I have done EVERYTHING right (I think.) And it won't work D=. Is it because of Dark Comet? Sorry for being a pest...

iCryptex - November 27, 2014, 5:12 am

(Nov 26, 2014 11:22 PM)TrojanRAT Wrote: [\[CITE\]](#) Umm... I have done EVERYTHING right (I think.) And it won't work D=. Is it because of Dark Comet? Sorry for being a pest...Read what Leumonic has just said above you (if you're facing the problem that you think that you may have).

Mr_Anonymous - November 28, 2014, 11:44 am

can someone help me please i have been trying to figure this out for a while.

so im trying to setup freeDNS with my RA4W VPN. when im setting up the dns do i still put my ip in the destination or do i put the vpn ip im using? i dont know.

i have tried using both ips and both times i listened to my selected port and ran the .bat (from my bin folder) and it didnt work either time

anyone know what im doing wrong or how to get it working?

RustyCl0wn - November 28, 2014, 4:07 pm

When using freeDNS in the ip/dns field use your dynamic DNS hostname you setup when you created your account.

ie. hackforums.afraid.org

Edit: Just so you know the idea of a vpn is to hide your true ip. Never use your home ip.

There is a freedns updater for windows over at techknowpro [dot] com/freedns/ may help.

Quoux - December 5, 2014, 7:55 pm

Hi! I think I still have a problem with my DNS but I am not sure. When I paste the link into my browser, I get : Error; Address has not changed.

How do I fix this issue? I have followed your tutorial and it is written very well, but I haven't been able to correct this yet. Thank you!

EDIT: Nevermind I must be blind. This is a good sign that I got this, not an actually error ahaha! Sorry! Thanks for the tutorial!

DukeRed - December 17, 2014, 12:53 pm

Wish I would've seen this post 5hrs ago!!! Been racking my brain trying to figure out what I did wrong lol?

PureLifeCoding - February 26, 2015, 8:49 am

I just made a .vbs script that makes a web request to the DNS Update API then pops up a message box with the result. Seems to work just as good, if not better.

mr_boss - March 25, 2015, 2:01 pm

I was having problems with the original tut.
I didn't do the \bin\ part right.

Now I get it. Installed just like you said ;)

But I still get this :

"ERROR: Address (my IP Adress here) has not changed."

I don't know what's wrong :/

Acquire Zion - July 25, 2015, 11:51 am

Thank you very much for posting this! Resolved my issue with wget :)

mr_patate - September 10, 2015, 2:11 pm

Have the same problem with RA4W Vpn

#Skyline - September 10, 2015, 6:26 pm

I made this tutorial on a closed account when I was closed on HF.

Good to see it helping still.

Mika9931 - February 7, 2017, 9:10 am

Keep getting : Error adress is not changed.

Even after the solution

raghavsood999 - January 31, 2019, 7:07 pm

I am getting DNS record not found on MXToolBox :

<https://mxtoolbox.com/SuperTool.aspx?action=a%3anoobsplayground.chickenkiller.com&run=toolpage>
