Thread: [Get any username on HackForums](#)

Josh? - July 17, 2014, 2:16 am

I basically made a better version of an already released program.

[This is allowed on HackForums as long as you don't impersonate people, or try to do deals under other peoples names.](#)

The main use of this is to get usernames of accounts closed ages ago.

Dispersia - July 17, 2014, 2:19 am

I'm sorry I'm confused, what exactly does it do? No automation is allowed at all btw - but if it's not that, then I'm confused.

Zonol - July 17, 2014, 2:19 am

Downloading now, program looks great.

Josh? - July 17, 2014, 2:20 am

This adds invisible characters to the end of a username. The characters can't be seen, but still count as changing the username. With this, you could get the name "Bob", as it will be "Bob*invisible characters"

(Jul 17, 2014 02:19 AM)ZØNOL Wrote: [\[CITE\]](#) Downloading now, program looks great. Thanks. Let me know if you have any changes I should make.

Oh alright, thanks for clearing that up, I understand now lol. Nice little project then, I feel a theme is a little overkill however :P

Josh? - July 17, 2014, 2:23 am

I've learnt from previous releases, you get anally raped if you don't try and make it look nice.

Nicole Mejia - July 17, 2014, 2:23 am

oh thanks op this is going to be really usefull

Cyrus - July 17, 2014, 2:25 am

Another way to do this is just copy one of the invis characters from here, faster and easier:

<http://unicode-table.com/en/>

EDIT: But welldone OP, good to build little programs for practise. ?

Josh? - July 17, 2014, 2:27 am

Some people want a program to do it, and don't know what character to use.

Only idiots think like that.

Functionality > appearance

People who just got into programming never realise that.

SwimmingPool - July 17, 2014, 5:05 am

This makes it so you can't search for peoples profiles.

Josh? - July 17, 2014, 5:06 am

(Jul 17, 2014 05:05 AM)SwimmingPool Wrote: [\[CITE\]](#) This makes it so you can't search for peoples profiles.

Wrong... When you search people's profiles it checks if the searched string is anywhere in their username, which it will be.

(Jul 17, 2014 05:04 AM)Dialog Wrote: [\[CITE\]](#) Only idiots think like that.

Meh, both work just fine on this, IMO.

Cyrus - July 17, 2014, 5:42 am

Any of the invisible characters, Imfao ?

Josh? - July 17, 2014, 5:46 am

(Jul 17, 2014 05:42 AM)Cyrus Wrote: [\[CITE\]](#) Any of the invisible characters, Imfao ?

Some people are really that dumb...

MixED - July 17, 2014, 5:46 am

hmm I might try this. I always try to get "99" but no luck

Truth Will Out - July 17, 2014, 5:47 am

From what I heard they either close you or repfuck if you do this, so releasing this might not be the best thing to do

Josh? - July 17, 2014, 5:55 am

(Jul 17, 2014 05:47 AM)Nook Wrote: [\[CITE\]](#) From what I heard they either close you or repfuck if you do this, so releasing this might not be the best thing to do

Hmm, I'll ask an admin. Thanks for the heads up.

Decim - July 17, 2014, 6:40 am

Unless you were to code your own theme specifically for a single project, am I really the only one who thinks the default theme looks the best?

Josh? - July 17, 2014, 6:45 am

(Jul 17, 2014 06:40 AM)FPS.Arcane Wrote: [\[CITE\]](#) Unless you were to code your own theme specifically for a single project, am I really the only one who thinks the default theme looks the best? I personally greatly dislike the default theme, it's just a matter of opinion.

To be fair, this section is full of idiots, so you kind of have to see where he's coming from lol.

Vaxorr - July 17, 2014, 11:05 am

Great program good work, this will replace the letters with similar unicode one right ?

Josh? - July 17, 2014, 11:09 am

(Jul 17, 2014 11:05 AM)Null? Wrote: [\[CITE\]](#) Great program good work, this will replace the letters with similar unicode one right ?

Wrong, at the end of the name it adds 1 - 10 invisible chars, choosing between 2 different ones randomly :)

This way, you can see search for peoples profiles and find them :D

Slimy - July 17, 2014, 11:13 am

(Jul 17, 2014 02:20 AM)?Proddy³ Wrote: [\[CITE\]](#) This adds invisible characters to the end of a username. The characters can't be seen, but still count as changing the username. With this, you could get the name "Bob", as it will be "Bob*invisible characters*"

Thanks. Let me know if you have any changes I should make.

I thought instead of adding invisible spaces it would be using ASCII letters which look like normal letters letting the user choose a username which should work and look legit without invisible characters.

At-least, that's what I read from a tutorial in the Lounge sometime last week.

Josh? - July 17, 2014, 11:17 am

That would work, but you would not be able to search for that users profile, therefore making it annoying.

Tidas - July 17, 2014, 11:23 am

Omni has closed accounts with invisible usernames.

<https://hackforums.net/showthread.php?tid=4307299&pid=40904950#pid40904950>

Josh? - July 17, 2014, 11:26 am

<https://hackforums.net/showthread.php?tid=4307299&pid=40904950#pid40904950>

But these aren't invisible usernames. These are usernames with invisible characters. Different.

Tidas - July 17, 2014, 12:40 pm

(Jul 17, 2014 11:26 AM)?Proddy³ Wrote: [\[CITE\]](#) But these aren't invisible usernames. These are usernames with invisible characters. Different.

Nowhere in that thread did anybody mention 100% invisible usernames. It is implied he is talking about invisible characters, as the rest of the discussion is based around that.

Josh? - July 17, 2014, 12:46 pm

(Jul 17, 2014 12:40 PM)Tidas Wrote: [\[CITE\]](#) Nowhere in that thread did anybody mention 100% invisible usernames. It is implied he is talking about invisible characters, as the rest of the discussion is based around that.

Omniscient Wrote:I've closed accounts that have invisible usernames.

That's Omni's statement. Invisible usernames.

OffTopic: hey slimy wazzup?

(Jul 17, 2014 01:01 PM)Sn0wX Wrote: [\[CITE\]](#) 100% spot on there dialog. Ten point's for you.

Its like comparing between windows and unix

Sn0wX - July 17, 2014, 2:11 pm

It's nothing like that you silly little member.

Dispersia - July 17, 2014, 3:11 pm

(Jul 17, 2014 01:54 PM)Null? Wrote: [\[CITE\]](#) Its like comparing between windows and unix

EDIT: Nvrn, just goes to prove the type of people we're talking about lol.

Vaxorr - July 17, 2014, 6:33 pm

What does you mean by "nvrn, just goes to prove" ?

Cynn - July 17, 2014, 10:58 pm

I love you OP <3 I'm sooo happy I finally got the username I've wanted for the longest time ?

Josh? - July 28, 2014, 6:20 am

This still works.

Also, here is a post from omniscient saying it's allowed (but not encouraged):
