It's most likely a virus as far as I can see.

Pretty suss, new user and a lot of virus positives, wouldn't download until someone sandboxes the program in a VM and checks out for maybe weird processes or IP's connecting to comp and decompiles it.

Im pretty sure that one is a virus, im not sure for what reason tho. because he's a new account ?, nor because he provided no picture. I'd like someone to post here a scan or something to make sure if this guy is telling the truth or just a scumbag that wants more slaves for his rat.

People, this is neither a virus or the similar. I could make a video and show no virus is. If it a German side is with.de etc. Then the side is not mostly hackable or one finds no Admin side. If it tries, nevertheless, sometimes on.com or.org side, there it is simply to be found an Admin page. For wide questions I stand with pleasure at the possession. :)
