Thread: [Unknown device](#)

FederalReserveOSRS - July 18, 2014, 5:26 am

I can't seem to find the drivers. The only way I know how to do so is by installing some cracked third party software which is most likely malware infected

Just give me your laptop/computer brand and model as well as your version and edition of Windows 7. I'll give you all the drivers you need, the official ones.

Thank you very much.

My computer is a HP Pavillion 17 laptop, not sure how to check the model.

I guess it could be either one of these:

Serial No. 5cd41820jv

Product No. g9y56ea#uuw

Something written next to the laptop name which could be relevant: 17 -e126so

My edition of windows is ultimate.

Once again thank you very much

The model number is right. Are you using Windows 32 or 64-bits ?

Ethernet Controller : <http://ftp.hp.com/pub/softpaq/sp63001-63500/sp63396.exe>

For the other devices, I'll need you to follow my tutorial [here](#) and to send me via PM the VEN and DEV IDs (or screenshots) of the other Missing Devices. Thank you.
