<http://prntscr.com/44gagg>

This is a Program that pings Servers/Websites. You can use CMD (Command Prompt) but this is much faster. There is a Virus Scan below to prove there are no viruses in this Program.

Features:

- Server/Website Pinger
- Stylish Theme
- Credits Tab
- Help Button

Credits:

- Coder: oRequiem
- Theme: Ghost Theme

Help:

- If you need help, click on the "?" button on the bottom right corner, it is instructions on how to use it.

(Jul 19, 2014 10:40 PM)AmateurCoding Wrote: [\[CITE\]](#) How is this any quicker? You could do the same in a command prompt window or similar in the same amount of time...

Well all it takes is 2 things really, typing/pasting the URL/IP & click the button. In CMD, you can't copy anything, in my Program, you can copy & paste.

MysticHacker - July 19, 2014, 10:58 pm

You can copy & paste in cmd. Right click and see the magic. ?

oRequiem - July 19, 2014, 11:01 pm

Weird, it doesn't work for me. Well, this is just a basic program I've coded. It could be useful to others.

MysticHacker - July 19, 2014, 11:09 pm

Yes, it could be useful. But if everyone create apps for every cmd functions...

You should create a tool with more useful function what the cmd can't do for you. Like ping a host every 10 minutes and save the result into a txt and so on. Use your brain.

I'll start working on that soon. I'll think of something.

MysticHacker - July 19, 2014, 11:49 pm

Ok. Just make something what really can make the users life easier. ?

The copy function is known as 'Mark' - you then continue to highlight text and it will be copied to your clipboard when out of focus. I suppose this would be a little quicker but would be even better if other related features where integrated into it.

It was most likely quicker for him to drag over the "ping text box" onto a form1. lol all joking aside if you are learning to code and start out gj and keep it up.

Next time with such a simple tool that anyone can make by just dragging over an object onto a form and hitting the |> button please include the source along with it or a basic version without a "theme".

No one will use this tool just to use it unless in does some cool drop down matrix text revealing each varchar with flipping random chars etc.

Remember, this is just a basic program for people that don't feel like using CMD. It is a bit faster, but remember, it's just a basic program.
