For saving snaps I recommend you to use another app like [SaveMySnaps](#) or [SnapSave](#).

Savemysnaps can do all of this and more, all for free without needing credits.

<https://play.google.com/store/apps/details?id=com.liamcottle.savemysnapsplus>

EDIT:

And it has a smooth good looking layout, updated a few days ago and it's legitimately available in the play store without needing to install any alternative market apps.

Regulus - July 21, 2014, 7:30 am

Looks really nice man. I'll try this soon :)

SaveMySnaps can't do all of this.

Also, SuperSnap only requires credits for saving snaps, which I mentioned on the OT, therefor I recommended users to use another app for that like SaveMySnaps or SnapSave.

By the way, SaveMySnap is not available on all versions of Android.
