Thread: [Review of Xenon](#)

Vamporno - July 21, 2014, 7:12 pm

[Video: <https://www.youtube.com/watch?v=Fz5Bs03q2Hw>]

Xenon's dev team strives to ensure that the client is of the highest quality. They use the latest and greatest in event systems, being more efficient than Bukkit and yet with more simplicity. Xenon ensures that all the hacks bypass NoCheatPlus, mainly through having many people contribute. The distributed development process allows for the client to receive large amounts of input from many sources, and the high-quality programmers who work on it give the client a greater amount of awesome.

audrey - July 21, 2014, 7:12 pm

Yes hello, would like to leave one vouch for dis kawaii review.

??nsomnia™ - July 21, 2014, 7:13 pm

No offense but why would you review a client this popular..?
There was literally a review just the other day as well.

BFCE - July 21, 2014, 7:25 pm

ahh, xenon. still sets the standard for public, free hacked clients. but still pretty bad anyway.

6/10 would use if i didn't have money. but i have money so i would use iridium or flare ?

CCBM - July 21, 2014, 7:28 pm

Damn Rainy, you made made a review.
Topkek.

being more efficient than Bukkit
Not a hard thing to do, at all. Bukkit's event system is atrocious.

Sholay - July 21, 2014, 7:36 pm

Everyone in this section seems to think everything is shitty.

SIM-1980617 - July 22, 2014, 2:00 am

Topkek review, is nice, vouch for rainy.

Vamporno - July 22, 2014, 2:00 am

But this client called Xenon is shit :c

??nsomnia™ - July 22, 2014, 9:09 am

I've been using Xenon a lot lately because I'm too lazy to update Sleepless, and the problems I've had with it have been quote minor.

Calling it a shitty client is completely wrong. A shitty client is one that is skidded off a manifest grieving video or some shit.

Xenon works fairly well, and every client is going to have its bugs. Overall I don't think it's shit and that's being way to harsh on it.

Also it's free.

Most of the shit will be fixed when I release the next update.

There are too many bugs within the client and in all honestly I think he should of just continue making Proximity. But he did say he was going to fix it in the next update which is good to hear. Also, the KillAura isn't that good but nothingtheless it a public client.
