crypter.club - the high quality web based crypter

Our crypter, "Crypter.club", is one of the highest quality crypters you will be able to find on the public and semi public market. Our quality is simply unparalleled and we are the clear choice for anyone serious about their operation, whatever that may be. Crypter.club has absolutely no software dependencies, meaning that it will get the highest execution rate your bot will allow. We have a dedicated team who strive to deliver the best possible customer support and the highest quality products.

----- Features -----

- 100% 0/35 outputs (Scan4You); We make sure our crypter is completely undetected 99% of the time. We can every file automatically with scan4you, a powerful and regularly updated 35 AV scanning system.

- 100% C++ Stub; Our stubs are all made in C++ meaning they are stable and have no dependencies at all (see below).

- Very high execution rate; Unlike some other crypters, crypter.club boasts that it requires no other software to run. This means that it can run on every windows OS using the windows NT system architecture , ensuring a consistently excellent execution rate. (Confirmed stable on windows 98 - windows 8.1)

- Small stub size (50-60kb max); Our consistently small stub size make this crypter perfect for use with automatic downloaders or anything else benefiting from a small overall file size.

- Fast updates (usually every 8 hours or as soon as the stub is detected); We try our best to keep crypter.club completely up to date and FUD at all times. Compensation will be provided on the rare occasion that there is a lapse in this service.

- Web based operation; this means updates are instant as no client side software is required. This also means you can use the service on a mac or any other operating system you wish, provided it has a web browser.

- File is different each crypt made; Each file produced by the crypter is 99% unique. Version resources and icons are automatically randomized by our vast array of resources.

- UPX and noUPX options; If you wish to use UPX compression, we have an option for this. We apply UPX to the original PE only, so the output file will not have any UPX induced detections.

- Highly Compatible; Our crypter is compatible with most native portable executable files (.exe).

- Private stub available; If you wish to have your own stub which can only be affected by your own spreading, we have this option available to you. This option is great for people who spread to targeted systems. Pricing is below.

Prices

How to buy; To buy, contact support using one of the methods listed below. We do NOT support automatic purchasing of this product, and the website has a closed registration system, meaning if you want an account you will have to buy a subscription first from support.

Private Stubs; We recommend private stubs to those who distribute to a small-medium amount of computers (targeted and medium level). A private stub is built completely unique for you, and you will not be affected by other people's distribution. Pricing for these is per-stub, and you will need to buy a new stub every time yours becomes detected to a point you are uncomfortable with (this depends on how much you spread). Prices follow.

Private stub - 300\$

Time based subscriptions; A subscription means you will have access to the crypting panel for the amount of time you buy. We recommend this type of service to those who will heavily distribute their crypted files. Prices follow.

Day - 70\$

Week - 400\$

Month - 1200\$

Payment methods; We currently accept

- Bitcoin (preferred)
- Perfect Money
- Litecoin

FaQ

Why are your prices so expensive?

Read above. If you want, contact us and we will show you the prices of who we consider to be competitors.

What servers do you work with?

We work with nearly every portable executable (.exe). If yours has proven hard to crypt in the past, contact support and we will test it in our sandbox environment free of charge.

Can you add features such as startup/persistence/binding to crypts?

No. We do not do this as it would add proactive AV detections to the crypter, something we do not want.

Terms of Service

- No refunds unless you have a reason seen as viable by our staff
- If the crypter is not FUD for an extended period of time (almost impossible) then we will extend your time free of charge to more than compensate.
- No reselling or giving out crypts without express permission from support
- Crypted files may not be used for any illegal purposes, and we may not be held accountable or responsible in any way if this happens. The full responsibility of the crypter's output lies with the customer using the service.

As far as I know, this is a legitimate seller. Good Luck with Sales.

For all the Haters... Good luck finding a FUD crypter on HF. You're better paying for an expensive one like this otherwise the \$20+ you wasted on, say Razor Crypt, will be for nothing.

Prices are too cheap, i dont want no HF special to upload this diamond in the rough to their distribution centers. (ge.tt, virustotal, etc)

So many Brainless HF users these days all they do is throw away their cash and help the AV's without even knowing it.

I always get whispers, i purchased this crypter that you vouched for how do i run it?

my reply is always "dont delete it and forget Hackforums, Cya"

Im sorry but this makes no sense. First off you called some Hack Forums users brainless, most people like this are trying to learn. Probably the same position you were in. Also, you put a double negative in your opening sentence which kind of makes you look brainless.

Prices are too cheap, I dont want a HF special to upload this

That's what it should have said. Also, dont be a douche simple as that.

EDIT: Sorry OP, this had nothing to do with your product. However, i imagine this crypter is kickass. GLWS bro.

If we could keep the arguing about HF off this thread please. The fact is that both my partner and I were surprised at the mature response to our prices and quality, we fully expected everyone to not understand and freak out.

Crypter.club is fully FUD (see homepage), feel free to message me if you have any questions about

buying. Single crypt service is also available, however unique stubs are currently not available due to a very high demand. I will update when we have them back in stock.

EDIT: I believe Bull has completed his review and come to a conclusion, he should post here soon I'd imagine :)

Big Vouch for ARMDec! He's a really nice guy and knows a lot about crypting.

To those who think the price is too high or are sceptical:

This is actually an extremely low price for a very HQ crypt. Just think, would you rather have a \$20 crypter with 1000 pointless, gimmicky features and several hundred users sharing the same stub? This is professional quality and should be chosen over the cheaper options every time.

(Aug 21, 2014 10:56 AM)Raito_Bezarius Wrote: [\[CITE\]](#) Does your crypter can bypass Deep Freeze program security reset ?
Thanks in advance.

After researching Deep Freeze, it seems to be software to restore a system to a previous state. Crypting isn't involved in that at all, so Deep Freeze won't be affected.

_ARMDec - August 21, 2014, 11:29 pm

Here's three reasons why you got that response:

1. You didn't ask the coder
2. That question is irrelevant to the customer
3. That question is vague (handle imports - in what respect? resolving them, rebuilding the IAT, etc - none of this is a valid concern of a customer, our method has a very good execution rate, that's all you need to know)

If you're concerned with the compatibility of a file, we will test it for you for free

If not, why do you suggest we provide details of our loading method to a random person? You're very puzzling

a question, can You please educate me that how long lasting FUD is possible, in Days..

suppose, m using DC n m not uploading my fud server to any hosting nor need to spread, m using for just some target pc's n sending the server via skype, & want them as long as it possible to be my slave, they have NODE32, avira, avg type AV, n m really dont wana lose these slave, so please mention some feature which should i add from your service to make my server fud 100% n as long as it possible, m using one of paid crypter too right now,n its make my stub fUD pretty cool, but after 24 hours or maximum 48 hour its got detectable 2/60 or higher, and my target slaves get gone, mean their AV detect the stub,

it's impossible to give an accurate FUD time. our regular service uses a shared stub, sometimes the FUD time is 1 day, sometimes 5 days... which is very good considering our users distribute on a massive scale.

for best FUD time, you'd want to purchase a private stub, because then detections on our shared stub won't affect you.

If I had a very old RAT I wanted to spread, which all the antiviruses already have on their data, would that decrease the chances of infection after crypting it? Or would that mean the anti-virus program would detect it after they've been infected based on the activity of the trojan?

I just need to know whether it's worth investing in one of the latest trojans or not, as one of the old classic ones I want to use suits my needs perfectly already, and it's free.

Thanks!

Newer malware does tend to be harder for AVs to detect the behaviour of, so if you are looking for runtime FUD I'd recommend you upgrade.

When the post was made we were generating unique random icons - but since have found it more

effective to leech legitimate icons from icon databases

Icons change when you send them via network or some social network? Icons are just resource data, there's no reason sending them through the net would change them

we do not provide single-crypt private stub crypts. The reason is that we would basically waste a private stub for only 1 crypt, which isn't efficient

If you want a private stub crypt, you'll need to purchase a private stub

I've been testing and using this crypter for sometime now and I've got to say: it's one of the best crypters I have used ever. The coders of the software are very thorough in their techniques for keeping the crypter FUD and always seem to thoroughly randomize the output stubs from it. Qwerty does a nice job of always keeping the live stubs on the site as FUD ones as well, unlike most other crypters I have seen and used.
