Thread: [\[TUT\] Basics of Hacking \[NOOB FRIENDLY\]](#)

DPR™ - July 25, 2014, 7:33 pm

Hello.

I decided to make this thread is for people that want to start hacking. Here you will be able to find usefull information to start your hacking "career".

Content:

The 3 Types of Hacking

Website Hacking

Pen testing and Forensics

Computer Security

The 3 Types of Hacking:

White Hats:

Quote:The White Hat hacker has dedicated himself to fight malware and help others with their computer problems. He is a person you can trust, and he will most likely end up in a good paying job as a computer programmer or a security consultant. He will most certainly not end up in jail.

Grey Hats:

Quote:The Grey Hat hacker are in between white Hats and Black Hats. He will most likely commit pranks at people that he thinks is harmless, but it can also be illegal. He can at one time be helpful and help you with a computer problem, but at the same time infect you with his own virus. There is a chance that the grey hat will end up in prison.

Black Hats:

Quote:The Black hat hacker also known as a cracker is the one who deface websites, steal private information and such illegal activity. It is very time consuming to become a black hat. It can be very hard for them to get a job because of the illegal activity. If law enforcements gets you, you can expect jail time.

So where to start?

Before you try to learn something, or go for something answer this questions:
Which type of hacker do you want to be?

What is your goal?

To be successful hacker you need to meet these requirements:
You need to be patient.

You need to dedicate a lot of time to hacking. Because hacking is something that you will need to learn new things allways. So you will never stop learning!

So, with all this info i think you now can choose what type of hacker do you want to be.

Down here we will talk about different topics you can work with as a Hacker!

Website Hacking

Quote:You properly already guessed it, but website hacking is about hacking websites. You use your skills to find exploits and vulnerabilities in websites and web applications. Almost all major hacking stories in the news are about websites and databases that have been hacked. Once you have enough experience in website security you will be amazed about how easy it is to find vulnerabilities in websites. However, it will take a lot of effort and time to reach that level of skills. You will need to know a large amount of server-side languages and website construction languages like PHP, HTML, JavaScript, SQL, ASP, ASP.NET and Perl. This was just some of the languages you should know about. I will recommend you to take JavaScript, SQL and PHP very serious since it is in those languages you will find the most vulnerabilities.

Pen Testing and Forensics

Quote:Pen testing and forensics can earn you big money. It is these guys the company's call when they have been hacked. They are experts in operating systems, wireless connections and exploiting computers. This way will take A LOT of time and effort since there is so much you should know about. You shall know about how the different operating systems works, which exploit there is to them, how to exploit them, routers, encryption, malware etc. the list is almost endless.

Computer Security

Quote:The work these people do looks a lot like the pentesters. These people is able to detect and analyze new viruses and malware. They are working for companies like Symantec, KasperSky and Avira etc. Some of them are also working on labs that tests AV's and new viruses. They are experts in how viruses works and how they infect systems.

With this small thread, i hope you got decided what type of hacking do you want to be, and what "field" will you work on.

Sory for bad english spelling.

After reading this I highly recommend you to read this thread:

<https://hackforums.net/showthread.php?tid=4178212>

That thread is the best place to go deep in your journey.

If you liked this thread, just reply with your honest opinion. If you think that something is wrong, reply so i can correct it.

Thank you to all, and have a nice day! :D ??

This thread was not all made by me.

The original thread is from hack community (Credits to: Anima Templi)

I took out some parts, and added some parts too.

w34k - July 25, 2014, 11:32 pm

Nice post, may help some people here.

Sister Mary - July 25, 2014, 11:35 pm

Are you sure you even know the basics?

Pshaa - July 26, 2014, 2:14 am

Thank's man. Very helpful this thread :D

jimbohhacking - July 26, 2014, 2:37 am

Thanks very helpful, keep up the good work.

Inkie - July 26, 2014, 2:43 am

Theirs already about 50 of these threads and you changed pretty much nothing from what you copied and pasted.

Builder_Geeza - July 26, 2014, 2:43 am

OP, make sure you completely understand before you make threads like these.

For example; 'Computer Security' is a vast subject to cover - what you just said about it probably covers 5%, if that.

What do you expect ? It's copy and pasted material. The same exact thread has been posted on HF and many other sites. You're right though, he could have added more details.

Never saw this thread on HF. Thats why I posted it.

Callmehellor - July 26, 2014, 6:01 am

I mean no offence but they are copied and pasted straight from another website that i've visited before. i'm pretty sure it was hackthissite.org or something similar. Anyways, thanks for putting in an effort in helping.

That thread is a little bit hold. Its from 2012. If saw that i was not posting this one. Sorry.

MrFlippers - July 26, 2014, 12:52 pm

Not a Bad Tutorial.

Thanks for Sharing. ?

Hope it helps too.

Niely - July 26, 2014, 3:49 pm

Good thread. :)

Good for beginners to learn the Hats + Some basic terms. ;)
