How to get loads of twitter followers using AddMeFast

Registration

AddMeFast is a social media exchange site i will show you everything step by step.

Sign up by going to <http://addmefast.com/> and clicking Try for free now
You will get a form popping up where you can enter your details (Make sure it's a valid email)

Once you logged in to your email you should get an email in your spam folder saying Confirm your AddMeFast account

Once you click "Click here to confirm" you will be redirected to addmefast.com saying "Thank You! Your mail was confirmed and points were added to your main balance successfully.
Now you can log in to your account and start your promotion."

Getting the followers

Once you logged in on the left you should have a panel with social media Websites click any kind of website you want, For this case i am using twitter

Sign up a fake twitter, with any kind of name. We are going to use to get points so we can reedem the points on your actual twitter you want the followers on

Now click Follow then login then click follow

Keep doing that until you get loads of points, Then at the end you go to add site/page a page should pop up in where it says "Type:" set that to twitter followers make sure worldwide is selected type in your twitter username you want to get loads of followers on then click save changes. Then people should start adding you.

If you have any questions let me know.
