Features.

3 Uploading Choices. 2 Backups.

Email

Custom SMTP server, custom recipient.

FTP

A folder is created for each new 'victim', so your logs are never unreadable.

PHP

Just 1 URL and PHP code enable you the pleasure of not having to ever reveal your details.

Startup Customization.

Notification

Send a log to email, FTP and/or PHP with information about your 'victim'. Stealer logs are also included here.

Disabling

Disable access to the Registry, Task Manager and CMD in just 3 ticks.

Add to Startup

Choose from either the Registry or the Startup Folder so you never miss a keylog.

Copy Options

Copy to a pre-defined location, or specify your own. On an error, the backup copy location is triggered. If that also results in an error, the Temp folder is used. Talk about double protection.

5 Stealers. 7 Deletions.

Stealer List

- Firefox

- IMVU

- Filezilla

- Pidgin

- No-IP

Stealer logs are incorporated into the Notification log - no more flooding.

Deletion List

- Firefox Cookies

- IE Cookies

- Steam Cache

- Firefox Master Password

- Google Chrome Cookies

- Opera Cookies

- Safari Cookies

Logs Layout. Now made by you.

Active Window Customization

Ever thought, "fuck - that's an ugly distinction for the window title", or "why are the logs so close together"? Well, now you can choose what goes between the window title, as well as the number of line breaks between them.

10-Key Customization

Too many people ask, "wtf does [LB] mean?". Well, it means Left Button, or Left Click. But hey, you don't need to ask anymore - now you can customize the text that's displayed for 10 keys, including the parenthesis that surround them. Awesome.

Optional Melt. Multi-File Binder.

Optional Melt

Decide whether you want to melt the server (copy it to a specified location and run from there instead) immediately after execution, after a specified delay, or simply not at all.

Multi-File Binder. All Extensions

Want to bind as many files as you want? How about throw in that .mp4 file too? Easy. Right click and add the file - it's that easy.

12 Antis. Multi-URL Downloader.

12 Antis. Purely Optional

Just want to avoid one anti-virus/malware spotter? Or maybe 2, 3 or 4? Well, instead of just saying "hey, you get 12 antis - here's the list.", you can tick which you want - enjoy.

Multi-URL Downloader

Feel the need to randomly swamp your victim with multiple trojans? Well, instead of only letting you download just one file like most keyloggers, I've given you the option of downloading from as many URLs as you want. Freedom is great, eh?

Screenshots. File Pumper. Assembly Editor.

Screenshots]

5 extensions. 35% quality range. Get to know your 'victim' even better.

File Pumper

Server too small? Want to get the exact same filesize as some other file? Enter the desired server size, and you'll get just that, give or take a couple of bytes.

Assembly Editor

Credits to fLaSh for his .dll - customize the assembly of the server to increase stealth.

Remote Control. Website Blocking. Even More Tools.

Remote Control

The tutorial is built into the builder, so I'll give you a brief overview.

Upload a .txt/.html/readable file to your server, give the builder the URL to it, write commands to it, and the server will execute it. Easy as that. Currently supports "cure", "download" and "re-steal".

Multiple Website Blocking

Why do so many other keyloggers allow just one URL to block, or only predefined ones? It really isn't hard. Type the URL, hit enter and it'll get added to the victim's hosts file when the server starts up.

USB Spread

When a USB is inserted, the keylogger is copied to the drive, and an autorun file is written to execute. Easy spreading is easy.

Don't Show Hidden Files and Folders

Show hidden files and folders is unchecked. Increases stealth.

Turn Off UAC

UAC is turned off on restart.

Icon Changer

Credits to fLaSh for his .dll - change the icon of the sever to any .ico you feel like.

ActiveWindowSort. Genius.

Chronological order is old. Nobody wants to see the exact same window title repeated.

ActiveWindowSort sorts your window titles via their process - and makes sure it only ever shows you the same window title once. This way your logs are easy to read through - something is either there or it isn't - no need to search through the entire log when you can search just the process/window title. Easy as that. Note the difference:

Lethal Keylogger Logs ([Click to View](#))

[img]http://img210.imageshack.us/img210/3555/logrepeats.png[/img]

Lethal Injection Logs ([Click to View](#))

[img]http://img411.imageshack.us/img411/9625/lognorepeats.png[/img]

Colours denote different window titles.

MSN 2-Way Logging. Get the Full Conversation.

Hate only seeing your victim's side of the conversation? Not understanding anything? Now you can view the entire conversation - what your victim and the person on the other end have to say. All built into Lethal Injection.

MSN Logs ([Click to View](#)) [img]http://img27.imageshack.us/img27/1815/msnlogsexample.png[/img]

AntiRepeat. Remove the Annoyances.

Seriously, what is the point of seeing Left-Clicks repeatedly? There really isn't a point IMO. That's why I've implemented AntiRepeat on 9 keys:

9 Keys ([Click to View](#))

Escape, Page Down, Scroll Lock, Page Up, Num Lock, Print Screen, Left-Click, Right-Click and Scroll-Click.

[img]http://img293.imageshack.us/img293/2635/wasteofspace.png[/img]

versus

[img]http://img526.imageshack.us/img526/7847/spaceminimization.png[/img]

The point of this is to leave you with clearer logs. Nobody wants to look at 4712347239854 lines of [LB] in their logs. Everybody's happy with just one in a row.

Credits. These are awesome people.

Cyb3rDev1L - coding, support, stealers.

m0n - support.

fLaSh - assembly + icon editor.

DarkSel - firefox stealer.

newbie223 - firefox stealer converted.

Aeonhack - keyboard hooks.

Deathader - read/write to resources.

daneasaur - support.

How to buy.
Not for sale anymore.

daneasaur - May 24, 2010, 11:34 pm

Vouch for jacktheripper. I also have tested this program and works 100%.
Recommend buying this if you are looking for awesome hacking.
Two way MSN means you can read what other people are saying to your infected! I loved it xD

m0n - May 25, 2010, 12:27 am

Awesome keylogger, simply the best!
Works perfectly on Windows 7, logs are clear and easy to read, absolutely love the sort by process feature :D

Easiest keylogger to read out there!

100% recommended to anyone! Well worth it's price considering how feature packed it is!

Matter - May 25, 2010, 12:30 am

Pm me, I have a god offer.
:)

Fake. - May 25, 2010, 2:01 am

(May 25, 2010 12:30 AM)Matter Wrote: [\[CITE\]](#) Pm me, I have a god offer.
:)PMed.

Anyone at all have any suggestions/feedback?

Oxycodone - May 25, 2010, 3:51 pm

Vouch, i helped work on this and ive tested and works 100% .

Recommended.

The logs can be customized, and it steals, keylogs with PHP, FTP, Email

Your able to control your victims from a webfile

How much more do you want !

T.G.O.D. - May 25, 2010, 3:52 pm

I will review this for you and leave a good vouch!

Oxycodone - May 25, 2010, 3:54 pm

@Ice cream, no more free review copys are going to be given away. JackTheRipper isnt here to give free stuff away, hes here to sell.

We have already tested this as jack has posted.

Its up to jack, but honestly we had enough reviews on this.

Ryxa - May 25, 2010, 5:02 pm

Well 1st i don't think he would steal a source and not give credits so idk, if he did ill notify him.

But i doubt he did it,

thanks tho!

Ryxa - May 25, 2010, 5:27 pm

I wasn't accusing him of anything :). It was just that no other keylogger had that feature except mine, and he posted in my thread before selling his own keylogger...

But people come up with the same ideas all the time :)

Oxycodone - May 25, 2010, 8:34 pm

Ye the MSN conversation logger was a brilliant idea, he was creating it when me n him were talking and freaked me out when he showed me x)

Fake. - May 25, 2010, 11:28 pm

You never replied to me lol.

Yoshistr's keylogger also has the same concept.

Nah, didn't steal from you, I've been working on the keylogger for several months now =P

The 7th Sage - May 26, 2010, 12:29 am

Jack is a nice coder and he has worked hard on it. Vouch for him.

Fake. - May 26, 2010, 12:32 am

(May 26, 2010 12:29 AM)The 7th Sage Wrote: [\[CITE\]](#) Jack is a nice coder and he has worked hard on it. Vouch for him.

Thanks for the vouch. Seems that nobody's remotely interested, lol.

The 7th Sage - May 26, 2010, 12:52 am

you may want to release a free trial or something for public. Don't know but that got me offers.

btw what's the stub size?

Fake. - May 26, 2010, 1:00 am

(May 26, 2010 12:52 AM)The 7th Sage Wrote: [\[CITE\]](#) you may want to release a free trial or something for public. Don't know but that got me offers.

btw wats the stub size?

Stub size is 69kb. Yeah I'll prob release a free version (maybe even the entire thing free :O)

shanker - May 26, 2010, 1:05 am

(May 26, 2010 01:00 AM)jacktheripper Wrote: [\[CITE\]](#) Stub size is 69kb. Yeah I'll prob release a free version (maybe even the entire thing free :O)I like that idea. lolol.

Anyways. What's it coded in ?

Fake. - May 26, 2010, 1:07 am

(May 26, 2010 01:05 AM)shanker Wrote: [\[CITE\]](#) I like that idea. lolol.

Anyways. What's it coded in ?

It's coded in pure Visual Basic 2008.

Thug Life - May 26, 2010, 1:08 am

Looks like a awesome keylogger with lots of features, nice gui great :D

Fake. - May 26, 2010, 1:11 am

(May 26, 2010 01:08 AM)† The Beast † Wrote: [\[CITE\]](#) Looks like a awesome keylogger with lots of features, nice gui great :D

Thanks, that's what I coded it to be xD

ubbelol - May 26, 2010, 1:19 am

Looks good, alot of work on it lol.

But way to many options for my taste, i mean most of them could make it very unstable and big. And its already pretty big stub.

But oh well, GJ

Fake. - May 26, 2010, 1:40 am

(May 26, 2010 01:19 AM)UbbeLoL Wrote: [\[CITE\]](#) Looks good, alot of work on it lol.

But oh well, GJ

Unstable? No, I and a few others have tested the features, different configurations.

Big stub? Okay, the point is to not just send someone the stub by itself really, you really should bind it or whatnot. Thus, the stub size really doesn't matter too much IMO.

The 7th Sage - May 26, 2010, 7:15 am

yes infact, sending someone server with only 50kb file size will cause more suspicions so i don't get why its such a big issue, maybe the memory usage?

Oxycodone - May 26, 2010, 8:29 pm

Still for sale, hit us up if you want it!

__Crypt__ - May 26, 2010, 8:30 pm

Looks good, but I prefer Hiddenlye. Looks nice.

GL Selling.

Oxycodone - May 26, 2010, 8:31 pm

Dont come to our thread advertising another keylogger, its a dick move lol. Sorry just that we try to sell our own stuff and they sell their own. No1 fights

ok?

__Crypt__ - May 26, 2010, 8:34 pm

I didn't advertise. I just said I prefer it, and don't flame me. Im not a "dick" and don't tell me not to fight when u started it!

~*BYE*~

Oxycodone - May 26, 2010, 8:35 pm

Lol i said not to start a fight xD not that lets fight.

Well i call saying a diffrent product in our thread advertising, we have diffrent opinions so o well.

Have a nice day mate.

softs - May 26, 2010, 9:38 pm

does it bypass Anti virus proactive defense

Oxycodone - May 27, 2010, 3:59 pm

Still for sale, im online and get get it all setup a.s.a.p!

Oxycodone - May 27, 2010, 7:49 pm

New HWID Protection added, now its more secure and is easy to use in a click of a button!
New feature added to the builder!

Oxycodone - May 29, 2010, 6:17 pm

Still for sale!

Accepting LR and PP !!!

Samuell - May 29, 2010, 6:28 pm

Your product looks very good mate, however I am curious to see how stable it is; I'll be following this thread to see how it goes, GL ^^.

P.S. That's a lot of options with a not-too-sexy GUI :P.

Oxycodone - May 29, 2010, 7:53 pm

Well so far its pretty stable, and we are going to update the Windows File View in the next update, and so far its pretty good.

We also are going to add a online HWID system (HardLock) soon once i buy a host (soon)

This will allow us to send updates when we arnt on, and each user will have their own space.

We can send messages from our client saying "Contact for new updated stubs" or anything we want.

The update is free so buy now!

kbhawkman - May 29, 2010, 8:00 pm

Vouch for him, he sent me the program when it was still in testing and this actually allows you to customize you own logs... COOL!

Oxycodone - May 29, 2010, 8:34 pm

(May 29, 2010 08:00 PM)kbhawkman Wrote: [\[CITE\]](#) Vouch for him, he sent me the program when it was still in testing and this actually allows you to customize you own logs... COOL!
Thanks for the vouch!

Yes the keylogger is 1 of a kind, People always complain asking whats [lb] or [rb] mean. So jack decided to have EVERYTHING customized so the user knows whats happening!

eXosphere™ - May 29, 2010, 11:15 pm

Looks pretty nice.
Easy GUI and Noob friendly.

__Crypt__ - May 29, 2010, 11:16 pm

Looks nice, btw, u need a sales rep? Add me on msn if so... chris0109@slickscripts.org

Oxycodone - May 30, 2010, 3:46 am

Still for sale!
Next customer gets 5\$ Discount on any purchase, not including server building!

kbhawkman - May 30, 2010, 6:27 am

(May 30, 2010 03:46 AM)Cyb3rDev1L Wrote: [\[CITE\]](#) Still for sale!
