Thread: [\[Release\] \[Update\] ClamAV-Easy - Use ClamAV easier \(Anti-Virus\) \[Free\] - C++](#)

Niely - July 27, 2014, 3:30 pm

[\[+\] Website](#) [\[+\]](#)

Hello

ClamAV is the best Anti-Virus for Linux.
But, it's really user-dependent.

That means that it depends for a part on you if your PC is clean or not.
And we all now, that ClamAV and especially some special commands aren't easy to use at all!
I personally found that as well.

That's why I made a special program in the programming language C++ called ClamAV-Easy!
Yeah, the name says it all! ClamAV can be easy!

I took the most for common ClamAV options and replaced them with easier ones, and added some extras as well.

Like an Analyse function who displays infected files and move them to a folder where you can analyse them.

But of course also just a standard option which updates the Virus Database, scans your whole PC, and remove all the infections, just for you! :)

Isn't that great?

[+] Features

[-] Free (Also no survey or anything)

[-] Easy-to-use

[-] Linux only

[-] Open-source

[-] Safe & fast download

[-] Keep your PC clean

[-] Graphic User Interface (optional - option)

[-] Performance

[-]...

Easy-to-use:

Yes, ClamAV-Easy is made to be easy. Tough Anti-Virus applications can cause trouble. The commands/options are often hard to use and maybe you could make an mistake and let malware enter your PC! With ClamAV-Easy, you don't have that risk anymore.

Linux only:

Sorry for the Windows-users, but ClamAV is mostly Linux based so I didn't see a need to make it for Windows.

However, You can use ClamAV-Easy for your Virtual Machine as well!

Open source:

[img]http://142536789.cf/pictures/legionHR.png[/img]

This application is open-source for all members.

Thanks Legion for helping me optimizing the source!

[img]http://142536789.cf/pictures/legionHR.png[/img]

About Source:

This application is open-source, that means that everyone is able to see and edit it.

But also, that everyone could abuse it.

I trust on you guys to not abuse it... Read the readme.txt about more info regarding the source.

Feedback/suggestions on the application itself can be placed here on this thread.

Feedback/suggestions about the source code is handled through PM.

[https://hackforums.net/private.php?action=send&uid=2200849&subject=\[ClamAV-Easy\]%20Suggestion/Feedback%20regarding%20source](https://hackforums.net/private.php?action=send&uid=2200849&subject=[ClamAV-Easy]%20Suggestion/Feedback%20regarding%20source)

Safe and fast download:

Our download is found clean by several malware analyse websites:

<https://www.virustotal.com/en/file/dd556badd0bdaa1b5b87e95b109c7f5383d673f8ea814ace7ff68bd69454534/analysis/1406499070/> (100% clean)

<https://www.virustotal.com/en/file/ff0903b120c4047f6dbd4e53524f1e9c0c1037c08eb4c91f9f7eff7de87ad354/analysis/1406499086/> (100% clean)

<http://NoDistribute.com/result/COjm0in8HUvQE7aR2V> (100% clean)

<http://NoDistribute.com/result/YGbQM9pkvTjc> (100% clean)

<https://www.virustotal.com/en/url/473410f5d9817bd65a25338b3112c7f2082afc722ce2c4d45391c4faedcb2893/analysis/1406499222/> (Site is 100% clean as well)

And the download, is really fast (0.25 seconds for the average user).

Keep your PC clean:

Keep your PC 100% clean using this handy and extremely easy application!

Graphic User Interface:

You can use the extreme handy Graphic User Interface if you want to.

Performance:

This application isn't just made in regular programming languages like vb.NET or C#, but in C++. C++ is one of the most best and powerful programming languages ever exists.

And this application is made in this language.

Picture of application:

Spoiler ([Click to View](#))

[img]http://i.minus.com/ijOo5Ts8hl3fD.png[/img]

Extra:

You still need the official ClamAV to use this application as well.

You can always report bugs/problems here using that 'troubleshooting'-interface. Grammar/spelling faults are appreciated as well! :)

Of course it's just V1.0 and it's a demo of a demo for a future application (iCode4U-application). :)

Any suggestions appreciated! ;)

Hope you guys like it! :D

Updates

I'll update this application until it reaches it's top. Suggestions, feedback, bugs,... are always appreciated.

- [Bug] Folder-only scan fixed | 28-Juli-2014
- [Extra] Source code updated | 19-Aug-2014
- [Extra] Made open-source | 23-Aug-2014
- [Extra] MIT-License added | 24-Aug-2014
- [Added] Daemon option, Test option, ClamAV-website URL | 15-Oct-2014
- [Added] Auto-included extra official ClamAV commands into the standard option to ensure more security | 23-Dec-2014

[\[img\]http://i.minus.com/iySPdafpanZEd.png\[/img\]](#)

Thanks for reading,
Niely

Hunting Rifle - July 27, 2014, 3:41 pm

Can you show me a picture of the -i?

Niely - July 27, 2014, 3:48 pm

^The GUI is the default ClamTK ones. :)

Sicarius - July 28, 2014, 3:40 pm

Nice work as usual Niely, wish I had the patience for C++ ?

JamNex - July 28, 2014, 11:54 pm

I have found an issue with your site, OP. I have contacted you about it and supplied you information on what to do for an easy fix.

[[[333rd post]]]

Niely - July 29, 2014, 9:04 am

^Thanks for reporting it. :)

Taking care of it now.

(Jul 28, 2014 03:40 PM)Silent Infiltrator Wrote: [\[CITE\]](#) Nice work as usual Niely, wish I had the patience for C++ ?

Thanks for the nice reaction! :)

I first also wasn't motivated to learn C++.

But my (accidentally) 'switch' to Linux forced me to quit vb.NET and start learning C++. :)

Null Byte - July 29, 2014, 9:43 am

I do think the source should be available to all members... That's sort of the point of open-source and linux in general. Nonetheless, great work!

Niely - July 30, 2014, 7:46 am

^Thank you very much for the reaction! :)

I also thought about making it open-source, but was a bit afraid that the more experienced programmers would come in and just rudely change the code is bad etc.

In Legion, I don't need to be 'afraid' of that because there are no rude members there. ;)

Anyway, thank you very much for the reaction! :D

Hunting Rifle - July 30, 2014, 7:48 am

I noticed a thing, when you do the install command it uses apt-get. I am on Arch and it just fails.

Niely - July 30, 2014, 7:57 am

You need to use the Pacman command to install it:

Code Pacman -S clamav

Seems like there is no other way to do it. :)

Will take a look if I can make something that checks the OS/Kernel version to make it responsive with other Linux distributions as well.

Anyway, tell me if it works well on Arch (besides this small problem). ;)

Thank you very much for using it! ?

Hunting Rifle - July 30, 2014, 8:06 am

(Jul 30, 2014 07:57 AM)Niely Wrote: [\[CITE\]](#) You need to use the Pacman command to install it:

I did that, but with yaourt, it's a pacman wrapper.

Niely - July 30, 2014, 8:10 am

(Jul 30, 2014 08:06 AM)Hunting Rifle Wrote: [\[CITE\]](#) I did that, but with yaourt, it's a pacman wrapper. But, it doesn't work?

Once ClamAV is installed right ClamAV-Easy should easily do the job (normally).

Hunting Rifle - July 30, 2014, 8:20 am

(Jul 30, 2014 08:10 AM)Niely Wrote: [\[CITE\]](#) But, it doesn't work?
Once ClamAV is installed right ClamAV-Easy should easily do the job (normally).
Everything just says done 100% right after I launch it.

Niely - July 30, 2014, 8:22 am

^100%? :P

That's weird, I didn't even included that in my program, just [Done].

Anyway, I'll try to help you further.

Can you make a screenshot of it? What command did you used, the -standard one?

Hunting Rifle - July 30, 2014, 8:33 am

Seems to work now, thanks anyways for wanting to help me.

Niely - July 30, 2014, 8:34 am

^Then it's okay. :)

And no problem.

Really thank you for using it, I really appreciate it! :D

DpzFAsq4UEK8 - July 30, 2014, 9:55 am

What? Source not public?

;-;

Hunting Rifle - July 30, 2014, 10:52 am

(Jul 30, 2014 09:55 AM)Arrhythmia Wrote: [\[CITE\]](#) What? Source not public?

;-;

It's public for Legion l33t haxx0rz.

DpzFAsq4UEK8 - July 30, 2014, 11:06 am

Please don't tell me that you are doing system("cat file.txt") to read a file.

Please.

[img]<http://a.pomf.se/jcrczn.png>[/img]

Niely - July 30, 2014, 11:51 am

(Jul 30, 2014 11:06 AM)Arrhythmia Wrote: [\[CITE\]](#) Please don't tell me that you are doing system("cat file.txt") to read a file.

Please.

[IMAGE INCLUDING PARTS OF SOURCE]

You're not allowed to share parts of source codes from this program on HF.

It's against the rules of HF.

I suggest you to read the [Help Docs](#) like any other decent user:

<https://hackforums.net/misc.php?action=help>

It's also clearly stated in the readme.txt file, if you want, I can put it in a pdf with a bigger font-size so it's easier to read for you?

This isn't only against the rules and piracy, but also really disrespectful.

Post is reported!

Also, there is nothing wrong with cat, it was even suggested on several forums.

Normally system functions are bad in C++, but not in this case, I clearly thought about the positives and negatives effects of it regarding this application, and there were more positive effects, also because it's only for Linux.

Please, if you have nothing interesting/good to share and don't know the rules, don't criticize me.

Post reported.

(Jul 30, 2014 10:52 AM)Hunting Rifle Wrote: [\[CITE\]](#) It's public for Legion.

And I did it for a reason, a good reason it seems. :)

Null Byte - July 30, 2014, 4:30 pm

Quote the clause in the HF [Help Docs](#) that says open source software is prohibited.

King Cin - July 31, 2014, 3:18 am

Will you make it completely open source when you have altered the code?

Niely - July 31, 2014, 4:17 am

(Jul 30, 2014 04:30 PM)Null Byte Wrote: [\[CITE\]](#) Quote the clause in the HF [Help Docs](#) that says open source software is prohibited.

You're not allowed to leak parts of the source code someone made.

Since Arrhythmia isn't in Legion + I clearly stated it's not allowed to share any parts of the source code, he leaked it. :)

<https://hackforums.net/showthread.php?tid=4368240>

(Jul 31, 2014 03:18 AM)Unknown • Wrote: [\[CITE\]](#) Will you make it completely open source when you have altered the code?

I'm thinking about it, depends on how this thread goes.

If rude people stay coming, not. Otherwise, probably. :)

You really that stupid to say that this is piracy ?

Please read the GNU/GPL please...

First of all, every modification made to application under the GNU/GPL has also to be released under the same license. (This falls under modified version)

You are not allowed to distribute Binary - executable only.

He didn't do ANYTHING illegal here. What he did is not piracy, not against the rules nor disrespectful as you are currently the one breaking the laws.

http://en.wikipedia.org/wiki/GNU_General_Public_License#Version_1

Niely - July 31, 2014, 2:10 pm

http://en.wikipedia.org/wiki/GNU_General_Public_License#Version_1

It is disrespectful because I clearly stated I didn't want that anyone would publish the source code.
+ It is against the rule on HF to share parts of a source code of an application made by a HF user.

<https://hackforums.net/showthread.php?tid=4368240>

Loki123 - July 31, 2014, 2:13 pm

http://en.wikipedia.org/wiki/GNU_General_Public_License#Version_1

I'll have to side with Loki on that one. When it comes to *nix, intellectual property under GNU/GPL, etc., he knows what he's talking about.

Niely - July 31, 2014, 2:17 pm

(Jul 31, 2014 02:13 PM)Loki123 Wrote: [\[CITE\]](#) Again, you are breaking the law by not publishing the source code. He isn't leaking anything as stated in the GPL license your application is required to follow.

I did follow the law. You fully decide yourself if you make an application open-source or not.

Loki123 - July 31, 2014, 2:32 pm

(Jul 31, 2014 02:17 PM)Niely Wrote: [\[CITE\]](#) I did follow the law. You fully decide yourself if you make an application open-source or not.

Ah, not really... Modification made to a application (In this case ClamAV) are required to use the same license if using GNU/GPL (In this case ClamAV does use GNU/GPL).

Now, as stated in the GNU/GPL if you release binary file for a application that uses GNU/GPL which you application does as it is required to use GNU/GPL you have to release the source code also. So in this case you do not fully decide if it is "open source" or not.

Wiki Wrote:Version 1 of the GNU GPL,[17] released on 25 February 1989,[18] prevented what were then the two main ways that software distributors restricted the freedoms that define free software. The first problem was that distributors may publish binary files only—executable, but not readable or modifiable by humans. To prevent this, GPLv1 said that any vendor distributing binaries must also make the human-readable source code available under the same licensing terms (Sections 3a and 3b of the license).

The second problem was the distributors might add additional restrictions, either by adding restrictions to the license, or by combining the software with other software which had other restrictions on its distribution. If this was done, then the union of the two sets of restrictions would apply to the combined work, thus unacceptable restrictions could be added. To prevent this, GPLv1 said that modified versions, as a whole, had to be distributed under the terms in GPLv1 (Sections 2b and 4 of the license). Therefore, software distributed under the terms of GPLv1 could be combined with software under more permissive terms, as this would not change the terms under which the whole could be distributed, but software distributed under GPLv1 could not be combined with software distributed under a more restrictive license, as this would conflict with the requirement that

the whole be distributable under the terms of GPLv1.

No, you didn't follow the law really. Breaking the license isn't legal at all.

I know, GNU/GPL sucks.

Niely - July 31, 2014, 2:37 pm

(Jul 31, 2014 02:32 PM)Loki123 Wrote: [\[CITE\]](#) Ah, not really... Modification made to a application (In this case ClamAV) are required to use the same license if using GNU/GPL (In this case ClamAV does use GNU/GPL).

Currently we are talking about your application and it's license. That is on topic...

Now answer my post.
Code tell me, what does your extension do ?
Does your application and ClamAV make function calls to each other and share data structures ?
Or is it a simple fork & exec ?

Niely - July 31, 2014, 3:15 pm

(Jul 31, 2014 03:05 PM)Loki123 Wrote: [\[CITE\]](#) Currently we are talking about your application and it's license. That is on topic...

Now answer my post.
Code tell me, what does your extension do ?
Does your application and ClamAV make function calls to each other and share data structures ?
Or is it a simple fork & exec ?
Fork & exec. Like I stated, it uses the Terminal to execute ClamAV commands.
Those commands are hard so I replaced them with easier ones.

Why was fork & exec the best choice?:Doesn't get out-dated

Application is Linux only so other OS won't be a problem

Easiest

Faster performance

Better performance

...

Niely - August 10, 2014, 8:14 am

I'm back from vacation and ready again to reply, and help people out with this tool! ?

D4T4B4S3 - August 21, 2014, 6:47 am

Looks really sick dude!! I am definetaly trying this <3

Niely - August 21, 2014, 8:39 am

^Awesome! :)
However, my website is temporary down (by SPAM).

But stay tuned, I'm fixing the issue + ClamAV-Easy will be back-up;
Source code is reviewed so will be open-source soon as well!

(I'll PM you if website is back-up).

Niely - August 23, 2014, 11:10 am

Update:

Application is updated + open-source! :)
Just re-download.

I edited a lot so bugs/vulnerabilities/problems can exist.

Feedback regarding application can be posted here,
Feedback regarding the source needs to be handled through PM:

<https://hackforums.net/private.php?action=send&uid=2200849&subject=%5BClamAV-Easy%5D%20Suggestion/Feedback%20regarding%20source>

I'm also using a new website which is more safe as the previous one!

Hope you guys enjoy it! ;)

D4T4B4S3 - August 23, 2014, 2:49 pm

Awesome :D, downloaded it and works like a charm. Thanks mate :) vouch for u :3

jazzycool - August 24, 2014, 12:00 pm

do you really need an anti-virus on Linux?

Aura - August 24, 2014, 12:04 pm

If you think that malwares don't exist on *nix, you're horribly wrong. Malwares unfortunately exists everywhere.

Linux is extremely save on it's own.
But still, there are a few viruses who exists on Linux.

It also depends, if you download a lot (like tools, programs,...) you definitely need an AV.
If you really don't download anything/even don't connect to the internet it isn't needed.

Assuming you often download software, I recommend you to take an AV. :)
ClamAV is the best Anti-Virus, ClamAV-Easy makes the best Anti-Virus easy. :)
Just to be sure and keep malware out.

(Aug 23, 2014 02:49 PM)Førtune Wrote: [\[CITE\]](#) Awesome :D, downloaded it and works like a charm.
Thanks mate :) vouch for u :3
Thanks for the nice reaction + vouch. :)

Nice that you update this. I've talked to Niely before and I know that he knows what he's doing when

it comes to this sort of stuff, ClamAV-Easy is a great choice. Vouch for my friend.

Niely - August 27, 2014, 3:03 am

^Thanks a lot for your nice reaction and vouch! :D
Really appreciate it mate. :)

Update:

Daemon option:

Added Daemon option so you can also use the extremely fast ClamAV-Daemon as well!

Test option:

Option to get a safe Eicar test file to see if your ClamAV-Easy is running well.

Access www.ClamAV.net:

Access www.clamav.net fast from our application!

Thanks a lot! :)

^Thanks a lot for the nice reaction! :)
Hope it works glad for you.

Niely - November 5, 2014, 10:34 am

Hi

My website was down due a problem in the DNS. I was forced to create a new website:
<http://142536789.cf>

ClamAV-Easy, WordGenerator and other tools can be downloaded again! :)
<https://hackforums.net/showthread.php?tid=4514408>

Niely - December 23, 2014, 12:25 pm

Added a new option regarding the -standard option.

The official ClamAV had some options disabled which made it skip some files. ClamAV-Easy standard command is now configured to NOT skip those files and ensure security.

Updates are still coming to Linux' most secure AV! :)
