It's not copy paste... "oRequiem" asked about it in "Earn's" Suggest a theme thread... i worked on it without using themebase & Earn used themebase... He started developing before me... but i released first...;)

Although I really like it it's not really material theme. You could better named it Flat theme. But it looks good tho! ?

I named it Material Theme because I got the design from an image off of Google & it was called Material Theme. Also, Flat Theme had already been used, I think.
