Thread: [This image appears different in different image viewers](#)

The Wizard of Dos - July 30, 2014, 5:03 am

I stumbled upon this image while ago and I thought I would share it.

For some reason it looks different in every image viewer and in some browsers and image viewers it'll change a bit on reload. Thumbnails are not the same either.

[Here's a link](#) to a small album I made showcasing what it looks like in a few different image viewers (number 4 is definitely my favorite). Also [this](#) is the original image for anyone wondering.

I've tried to recreate the effect by changing the same hexadecimal values that changed in the original image, but with no luck. Let me know if you find anything else that's clitchy with this picture. Try it out for yourself?

EvilMorty - July 30, 2014, 5:06 am

Oh gawd, i'm infected with a browser virus!

lol jk :P

zeroexp - July 30, 2014, 5:11 am

Lol. Nice share. It actually works. It's different every time.

EK9# - July 30, 2014, 5:20 am

It a picture of penguins on my screen

The big one in the post o.O? I posted a link to the penguin picture, but that's not the glitched one.

Zyped - July 30, 2014, 5:28 am

Am I uncreative or some shit?

All I see is colorful boxes.

The Wizard of Dos - July 30, 2014, 5:54 am

I don't think you read the whole 4 lines of text in the top post lol. The image changes depending on what program you use to view it with. Take a look at the album I made. It's all the same picture just in different viewers.

Mikavw - July 30, 2014, 6:13 am

That's pretty trippy.

I definitely like number 4 the best as well.

Shigbeard - July 30, 2014, 7:02 am

You can literally change 4 characters in an image and make a cool corruption effect, it was the way the developer of Aritz Cracker Bank in GMOD made a "hacked ATM" screen.

p0lymorph - July 30, 2014, 7:04 am

Thats creepy man haha. But what the fuck is wrong with this image? haha

Read exactly ONE POST above you. PLEASE!

Man16 - July 30, 2014, 9:13 am

Umm im confused af its like a corrupted image but you say its penguins wat.

Server97 - July 30, 2014, 9:50 am

Nothing is ever different with the image for me o_O wtf

The Wizard of Dos - July 30, 2014, 12:10 pm

(Jul 30, 2014 07:02 AM)!!!! Scorn™ !!!! Wrote: [\[CITE\]](#) You can literally change 4 characters in an image and make a cool corruption effect, it was the way the developer of Aritz Cracker Bank in GMOD made a "hacked ATM" screen.

Of course you can, but this image CHANGES and that's pretty fucking hard to replicate.

Try loading it in different image viewers. I swear this is legit.

Matt Bomer ?? - July 30, 2014, 12:36 pm

Damn, @OP, That's pretty cool if I'm completely honest.

thisizkriz - July 30, 2014, 12:59 pm

I can't seem to find the penguins :D haha lol. Nice thread!

The Wizard of Dos - July 30, 2014, 2:08 pm
