I'm coming on to join your Minecraft server now!

SavageBoys - July 31, 2014, 7:02 pm

Was updating Space Engineers and KSP, I'll be back on soon.

Could new users possibly spawn with a golden shovel? Its not like its a high value item.

Nonon Jakuzure - July 31, 2014, 9:56 pm

Non server related criticism: get whoever created the thread layout to change the description font. I get the Minecraft themed font is cool and all but it's terrible when text of that size has to be read and is also badly type set.

Vamporno - July 31, 2014, 10:26 pm

Server looks nice. Read the rules and it said no hack client so now it going to be my first time playing legit GG.

nickchan - August 1, 2014, 12:00 am

Oh btw guys the server is pretty empty for having 1/200 slots. I know of a Minecraft facebook page that I'm in close with the owner with, it has almost 40K likes, if you want I could probably hook you guys up with a promotion discount. If you want it to help the server keep going.

Ok cool but I have a question. Why is my ping in game around 200? It doesn't really make sense because I have good net. I can ping the server from command prompt and get a response with an average of 77ms.

What Mod is that. I believe its Shaders mod but I'm not sure.

(Aug 2, 2014 04:44 PM)Chubaca Wrote: ([CITE](#)) What Mod is that. I believe its Shaders mod but I'm not sure.

Well the shaders mod itself just allows the use of shaders, the shaderpack is chocopic 4.7.1 beta (I modified it a bit though)

I had my settings set pretty low for that SS, I've doubled the res of my texture pack since and forced AA through catalyst.

And yes its perfectly playable and not one of those disable after taking screenshots setups :3

Chubaca - August 3, 2014, 12:46 am

Wish more people would get in the server. I wish the best luck to it and to the people who run it.

Chips Ahoy McCoy - August 3, 2014, 2:24 am

That mod looks amazing. Sorry I haven't been on much. I've been feeling pretty uninspired building wise. :p

Killua26 - August 4, 2014, 3:41 pm

This mod looks ridciously cool. I wanna try lol but I don't play mine craft anymore

Alright, so just an hour ago i went on to this server. Everything was looking awesome and all that. After a while i decided to go into setings. I saw an option i have never seen before. Something secret secret shit. I pressed it and the world looked diffrent. About 10 seccounds later my 2k\$ high end gaming laptop shut down. It's not turning back on. I think that mod eighter fried my motherboard, or my PSU failed randomly at the same time i turned the setting on. Can any of you staff tell me what this mod are, and what it does? I gotta know what to tell my repairers... Thanks.

Its not a mod it is built into minecraft, it was in older versions too but a bit harder to get to.

It turns built-in shaders on.

Most likely you overheated. I manually jack up my fan speed to max when playing MC with shaders.

Unplug it, remove the battery, hold down the power button for 10 seconds, put the battery back in, power up.

Has nothing to do with the server.

Edit: Uhh NickChan I found 7 diamond while mining and shortly after it somehow became a stack of 64.. is this a glitch of some sort? It didn't happen the first few times I found diamonds.

The only thing that would make sense is if his PSU failed, then it took something down with it. This is actually very common in no-name PSUs, especially in desktops.

Got on a little while ago after moving my minecraft installation over to my *nix system, did some touch ups on my property and cleared some more land nearby.

No one got on though :<

Maybe its time to bite the bullet and open up to other communities? Maybe drop the IP on some anime related forums/sites?
