Thread: [HMA Proxy Grabber](#)

iKQLY - July 31, 2014, 10:56 am

I finished (sort of) this awhile ago. It works but can be glitchy when scraping from multiple pages.

Haven't seen many (working) proxy grabbers lately so thought I may put this up. Maybe some other users could optimize it as I'm sure there are better ways of doing this.

As of now, this works 99% of the time when scraping 1 page. Works most of the time when scraping 2 pages. And like 50/50 when scraping more

*When exporting, double check that all the IP addresses in the grid are filled out. Sometimes it will skip a number or two. Still working on those bugs

Here's the source:

[Mediafire Link](#)

Here's just the application:

[MediaFire link](#)

Was also thinking of having the app run in the background and retrieve an updated page every few hours or so and just append it the the original textfile

I'm using kryptondatagridview, so if you do not have Krypton toolkit you cannot build it.

The dll for the toolkit can be found in the application download. I dont think it comes in the source download.

Unfortunately it would not allow me to export.. I'm not sure why.. I clicked export several times but nothing happened. Other than.. it would fairly well. :)

Hm really? you first clicked browse and selected your textfile? I never added any message box telling the user that it was successfully exported, so unless you have already checked the text file, it should still work

It crashed when I click Scrape.

Cornflower Blue ???-?— - July 31, 2014, 11:53 am

Good work, needed one of these for a while.

+1 green apple.

Thats cause you didn't put any value into the textbox for # of pages lol

Ah, now it works even with export.

Possibly change that label to "Number of pages to scrape?" instead of "Pages scraped" in the future :)

I got it to work now. I had sandboxed it at the beginning (I do it for everything I download) for whatever reason sandboxie was preventing it to export.. Its working tho now that I ran it normally. :)

The source is error :

<http://prntscr.com/48ctw4>

<http://prntscr.com/48cu22>

Help Me ?

Edit :

Sorry2, i didn't read :D

Problem Solved. ?

You might want to fix that.

Remember to always code with the most retarded end user in mind.
