Thread: [Slow Motion Bullet Shot Explosion in Photoshop](#)

**vcreative** - August 1, 2014, 4:49 am

This tutorial is in written and video format together. I'm going to show you how to design this really cool slow motion effect, using Adobe Photoshop CS5 , but We're going to use any particular CS5 feature, so for this tutorial also Photoshop CS3 or CS4 are perfect.

## 57 Steps Full of Videos and detailed images

You need to have a graphic tablet, if you want to be a digital artist: working with a mouse will take the whole process twice slower and obviously lower in quality. If you don't have a graphic tablet, and intend to learn how to Photoshop images, I strongly suggest you to buy a cheap one for 100\$, wich works perfectly. For this tutorial obviously, you can also use a mouse, but don't dishearten if the result is not as perfect as you imagined, it's probably not your fault.

In general, I suggest you to view this Tutorial with the purpose of understanding new tricks, new techniques, and how to engage a very long project with the correct criteria, instead of just reading and replicating the effects.
