Thread: [\[Tutorial\] HawkEye Keylogger | Email | FTP | PHP | Stable | Stealer + Much More](#)

P??ce - August 1, 2014, 7:35 am

Hello Everybody ?

This is Prince going to show you how basically you can work with HawkEye Keylogger which can officially be purchased from the following link:

[HawkEye Keylogger | Email | FTP | PHP | Stable | Stealer | Binder | Downloader | \\$15](#)

It has pretty a lot of options which you can use while generating your stub, but here I'll be showing you the very basic ones you'll be needing before you generate & crypt your stub ?

1. Starting

While starting it for the first time you'll be asked to login into your netseal account, if you're not having any account you can click on Create One & you'll be able to create one for no cost.

But in case you get the following error:

Spoiler [\(Click to View\)](#)

Then it means you need to install Dot Net Framework 4.0, which can be found here: [Click](#)

Once installed restart your computer & you're ready to go then ?

2. Delivery Options

HawkEye Keylogger is providing you three types of deliveries, delivery of logs via email, via ftp, via php, selecting php can be the best idea if you're targets are good computer operators.

a) Click on PHP;

b) Enter link of data.php file where you've uploaded it. (you'll get this file with the package & you need to upload it on any website).

c) Enter delivery time, if you're going to have a lot of targets then selecting maximum time period would be better, in my case I'll get my logs every 30 minutes.

d) Click on Test, if successful it'll give you a message & a file will be uploaded in the directory where data.php file was uploaded.

Spoiler [\(Click to View\)](#)

e) If you want to use the same option for future builds then click this option so you won't have to give your delivery information again & again ?

Spoiler [\(Click to View\)](#)

3: Keylogger Options

Go to OPTION#1 & tick mark your required options, i.e.;

a) Stealers = Going to steal saved passwords of your targets.

b) Keystrokes = Obviously you'll have to tick mark Keylogs which is probably the main function of this keylogger.

c) Spreaders so that you'll be automatically getting new targets with the help of your infected victims (your stub will be spreaded via usb & p2p)

d) It's optional but good option to be selected which is going to erase the history of users' browsers so that they'll have to type every website once again.

Must Read [\(Click to View\)](#)(Assuming you're going to Crypt your stub so we haven't selected startup option & we've skipped many other options which like disablers, downloader, icon changer,

assembly information changer, etc as they'll all be available in almost any crypter which you can chose while crypting your stub)

4. Building Server.exe

Navigate to Builder &;

a) Accept the terms;

b) Click on BUILD in order to generate your keylogger file.

Spoiler ([Click to View](#))

Give any name & click on Save.

Spoiler ([Click to View](#))

Everything has been done now ? Crypt your server file & tick mark startup option within your crypter & everything will be in your hands then ?

I'll be introducing you the remaining options via video tutorial in case you don't want to crypt the server (although not recommended) & use it as it is ?

For private support purposes me & [Collateral Damage](#) can be contacted any time ?

Hidden™ - August 1, 2014, 7:37 am

Thank you for this, I appreciate it.

OfficialNutty - August 2, 2014, 12:41 am

I have a few questions i wish to ask regarding crypters. Do you have a skype where we can talk? I can pay you to help me if you want. Pm me if you are interested

GearCEO™ - August 2, 2014, 1:15 am

Thanks for posting tutorial mate. Really appreciate that. For those who want support. Please ask OP for help.

CyanogenMod - August 2, 2014, 6:20 am

Nice Tutorial mate, great post for sure.

Clarkson - August 2, 2014, 11:52 am

Very good. PHP method is the best and the safest, I use the PHP method and I am dooing great, no bugs for sure!

?lixir - August 2, 2014, 11:53 am

As for a crypter, what do you suggest?

Clarkson - August 2, 2014, 7:36 pm

You can use kazy crypter & probably data protector will work, we will be posting a list of compatible crypters soon. Anything else you need please PM me.

EvelynDyCplus - August 4, 2014, 7:26 am

Hello id been trying to contact The seller, but seems nothing is replying on my msgs.

P???ce - August 4, 2014, 9:56 am

dewdenx - August 6, 2014, 2:50 pm

Hi, i like this keylogger... i am using php method but i have an issue as php page is showing me "success" only. i have to login to my cpanel to view result. I may be missing smthg. pls advice

P???ce - August 8, 2014, 6:37 am

(Aug 6, 2014 02:50 PM)dewdenx Wrote: [\[CITE\]](#) Hi, i like this keylogger... i am using php method but i have an issue as php page is showing me "success" only. i have to login to my cpanel to view result. I may be missing smthg. pls advice

Hi dear, it's showing success means it's working perfect, new logs will be saved in that directory where you've uploaded your data.php page, just like you receive logs via ftp :)

Marwix - August 8, 2014, 9:07 am

First of, you should try to improve your english and grammar as a supporter.

Second, the keylogger may look fancy but that doesn't mean it's good.

Third, there are better keyloggers than hawkeye, trust me.

Anyways, goodluck OP.

Silver91 - August 27, 2014, 12:21 pm

hello everyone

i tried to delivrate with gmail, and when i click on TEST it says "the server SMTP requires a secured connection or the client was not authenticated"

Mymann - August 29, 2014, 2:34 am

Prince I just added u on skype would be so grateful if u could help me.

lieutenantdan - August 29, 2014, 2:48 am

I use kazy, and I use startup option on kazy but once the server is runned by someone, I receive 1 mail with some details than winlogon cant be Installed cuz av block it so I lose the commection... what should I do??? And other question I use kazy and this crypter NEVER fully fud. Is it due to stealer or its about the crypter? What u suggest. Thank you!

Mymann - August 29, 2014, 3:26 am

Hey man can u take a screenshot of ur setup? Would be awesome and can't even get lgs! But I use cube crypter 11/60

relaxlike - August 29, 2014, 3:23 pm

Please give me your skype id on pm , i need some help on this.

Sir Cyrano - August 30, 2014, 11:54 am

How I get view the files by php ??? isn't there a panel Login for view the PHP logs ???

un_known - August 31, 2014, 2:27 am

Can i use ice lock crypter i am going to buy both of today!!
if i get immediate response

Cocokills - August 31, 2014, 5:41 pm

Uhh does this work? before i download it doe sit work?

NZWRT - September 4, 2014, 5:57 pm

Does HawkEye support cyrillic symbols?

mackmaine1587 - September 12, 2014, 1:13 pm

new to know how to receive logs via email as mine does nt

mackmaine1587 - September 14, 2014, 1:38 pm

any other new functions on this logger which you can explain via a tutorial

Solomon123 - September 23, 2014, 11:22 am

Could you please help me? I tried 2 different emails and i am always getting error: "The remote certificate is invalid according to the validation procedure." What am i doing wrong?

Thanks

GearCEO™ - September 24, 2014, 10:15 am

This was not gmail but another email provider...i used it in virtualbox pc...can it be the problem?

Thank you

PPlobi - November 24, 2014, 1:21 pm

Hi im interessted in hawkeye

I want to send the keylogger remotely to someone in a picture via the mail without him knowing
Is there a tutorial somewhere on how to do that?

Zen - November 24, 2014, 1:41 pm

(Nov 24, 2014 02:21 PM)PPlobi Wrote: [\[CITE\]](#) Hi im interessted in hawkeye
