Thread: [****\[DNS\]Selling Ddoser Dns And Swarm \[DNS\]\[CHEAP\]****\](#)

shockz - May 23, 2010, 12:39 pm

welcome

ok so i have about average 40 bots online on my ddoser but my torrents 9/19 fud so bots are slow at coming in i have had over 600 downloads on my torrent so that pretty much covers ddoser dns.

the swarm dns has 30 max but 10 have torrent clients so good for seeding and the Ddos is pretty effective and They Have High Connection Speeds 1 of the bots is a vps But is only 100mb/s sadly and one is connected to hospital :) so yeah hospitals usually have good speeds and all others are fast Home Connections you will have access to my dns's once bought i will delete the dns so you can register it on you'rs you can either use my Bin with my authhost //sethost etc and i will give commands list it also has botkiller installed =) !!

Well I'm not necessarily interested in the DNS itself, but installs would be great. I think I might need a re-crypt of my bot though and I don't have a crypter so this pretty much depends on if I can get it

crypted soon or if you have a crypter.

Well im selling the dns since all these are fresh updates with botkiller ran on them.

Oh alright. I'll think about it. Convince me to buy for a certain price and "maybe" we can work something out. 50 or less bots isn't a big deal at all, but I'll see what I can do.
