+EASYCOLOUR+

Bright, fun and colour customisable desktop theme!

C# SOURCE:

Wow. This is surprisingly stylish! I'll come back when the VB version is finished.

Thank you! I haven't fully tested out my VB version. It was originally only going to be for C#, so a lot of the VB version is just converted code. When I get a chance, I'll go through it and improve it, but it should still work as it is right now.

So many choices 0_0 i love the variety of choices, and it looks amazing really nice job!

Geekie - August 2, 2014, 4:35 pm

I like the way you did the tab controls. Very nice work.

Very nice. Looks sick, ofc the color changing is my favorite here.

SaketSaket - August 2, 2014, 11:07 pm

Nice work buddy.... Keep up your good work ;)

This is pretty f'in sweet homie :) ...can't wait for the VB.NET one to be finished... I couldn't get it to

work for anything but this looks fresh as fuck! Great job on this!

I have downloaded the vb.net version from pastebin and I got a button to have the colour I want and therefore: Thanks.

Can I put the EasyColour Theme in one off my projects with your permission?

First impression is very good.

Meh, I'm really not so fussed about getting credits. I just want people to use and enjoy my theme. Credits would be appreciated, but not necessary ?

Theme looks amazing

Thanks for the share

Hi, I replied a few post earlier already. I have tried your vb.net code from pastebin and I was able to make this GUI with the code you gave.

Personal: I like the contrast you added in the code.

Thanks! Nice to see some of the controls work nicely in VB. I'll try and fix the form tonight.

I'm not sure why...but I like this a ridiculous amount more than I probably should. Nice Theme OP, maybe I'll use it someday ?

That's great to hear! ?

Thank you for the kind words.
