The program uses a different encryption for every user. You can choose your own encryption if you want to inside of the builder. This will make your stub "personal" and make it so that it is FUD longer.

DO you offer a trial stub encrypted to know first hand if it really can bypass norton sonar and other proactives from norton ? (right now norton sonar has beaten 3 private crypters, and two public very famous crypters -all from hf- which their owners claimed that could bypass this proactive defense without effort... haha, for sure)

No sorry, I cannot start giving out free trial stubs. If I start doing that nobody would buy my crypter and people that bought it would see their stub loose FUD very quickly

ok, I have a few questions:
how stable is it?
what does personal stub means?
FUD time? average?
limited to x users?

FUD time? average?

limited to x users?

stability: I've never encountered any problems.

FUD time: On average one week with a lot of people but we always have a new stub after 5 days.

so it will always give a FUD output

users: As of now there is no limit, if we were to set one the price would probably increase. although we make sure that there are not too many users.

as for personal stub:

this should be possible, as for the "showing yiu the FUD crypt" I am currently on holiday so you'd have to wait 1-1,5 weeks for me being able to encrypt a file.

We currently do not support .NET so I am sorry but it does not support NanoCore. We are currently working on it though :)

Also, yes you can run it in a controlled environment, but remember that the program is HWID bound.

This does not include an extension spoofer since most of the extension spoofers don't work.

Everytime i build file i get "control.exe has stopped working" message.

the stub still builds but i cant test it. Not sure if this is an issue

Any suggestions?

Homunculus - August 31, 2014, 5:43 am

sleek design and good comments so far, will have to try this crypter out in the near future asap

The Sly - September 7, 2014, 3:31 am

Vouch for this nigga. Pro marketer and Businessbitch. Skype buddy as well.

Just buy his shit ok?

Gerion - September 7, 2014, 3:34 am

Big vouch for this Crypter, Sur Justice is highly trustworthy and has a great crypter.

Sur Justice - September 7, 2014, 9:40 am

e had some issues with the buy now system.

But we managed to fix the problems, and a bitcoin system should be in place very soon!

Raymond - September 26, 2014, 3:11 am

For more than 10 days, I can not get my product. I paid 80 \$ BTC. I was given a product, but it does not work. I was told that the fix very soon. It took several days, but that does not work. Promised that in the evening it will work. A few more days, but again that does not start to work. In skype not responding. Ignore the message. Refundable money do not want to. The product does not work. They took the money even though their product is not working. So they are scammers iobmanyvali me from the beginning. I do not advise buying this product

jon007 - September 26, 2014, 4:09 am

mine does not work either.and it was never fud.
