Thread: [Silent Startup \(Undetected Startup\)](#)

**PSPlover** - August 4, 2014, 1:44 pm

Hello guys (and Girls) i had written a virus but every time it tries to write itself in the startup the AV discovers it.

So here is my question how can i make a silent startup ?

**DeMoNi** - August 4, 2014, 1:46 pm

And you come here thinking we will give you a free silent startup ?

Why dont you try to think by your self ?

Search and search is the key of success.

Why not? one hand washes the other.

**Armitage** - August 4, 2014, 2:00 pm

Write it on : HKEY\_CURRENT\_USER\Software\Microsoft\Windows NT\CurrentVersion\Windows\Load ;)

I know that but like you said WE work a lot . And WE are coder and hacker and WE must hold together.

And who knows maybe someday you need OUR help as I now need yours.

Which language then? C , C++, Pearl ?

**Marwix** - August 5, 2014, 2:14 am

This is a 100% worthless thread. OP, you're very lazy.

Go and search on google before posting something like this on the vb section for fuck sake -,-

Is detects when you're writting to the registry at runtime?  
For sure? If yes, post your code.

Been a while ive seen such bullshit, concratz your added to my perma shitlist.

**Sutton2k9** - August 6, 2014, 12:04 am

If you have copied any part of your rat that will be that part that is being detected.  
If not you have to go and comment out your code to find the detection and change it.
