Vandie - August 5, 2014, 3:59 pm

Will try it out in the morning

Edit:

Vouch for Yui.

Software has a few problems but nothing that ruins it.

Tried it out and loved it.

Obli - August 5, 2014, 4:00 pm

WHY IS IT ALWAYS YUI

other than that seems nice

tweety - August 5, 2014, 4:01 pm

Can I ask why this is better than streaming online? Adblock solves the ad issues. You're advertising this by saying 'is your current website slow at streaming?' You're using a 3rd party website yourself.

You didn't even give credits to <http://www.animeultima.tv> even though you are using their service (inb4youownit).

EDIT:

That's why it's open source.

No need to be stuck up princess.

tweety - August 5, 2014, 4:07 pm

(Aug 5, 2014 04:04 PM)Yui Hirasawa Wrote: [\[CITE\]](#) That's why it's open source.

No need to be stuck up princess.

No need to call me a stuck up princess when I'm giving constructive criticism. Credit the website you are using and justify why your app is better than streaming, when your app streams from a 3rd party website itself.

Nonon Jakuzure - August 5, 2014, 4:08 pm

So why would this be better than actually downloading the episodes?

TheElo124 - August 5, 2014, 4:10 pm

even if its open source you credit where credit is due

Yui Hirasawa - August 5, 2014, 4:11 pm

(Aug 5, 2014 04:08 PM)Nonon Jakuzure Wrote: [\[CITE\]](#) So why would this be better than actually downloading the episodes?

If you have a quick browse of the source, it would actually be easy to implement a download button.

This is really for people who stream, it uses the AUEngine streaming server, which is known to be great for stream download speed.

- Yui

[@ Credit People - Check the info tab in AnimeSight and you'll see the credit right there to all the streaming services. Cheers]

Happeh - August 5, 2014, 4:13 pm

I like it Yui, just makes things a little easier. :)

tweety - August 5, 2014, 4:14 pm

I suggest you read the links I posted in my first post, your coding conventions are pretty poor. It would make it difficult for other developers to engage with your project if you can't do simple things like creating classes when required.

Nonon Jakuzure - August 5, 2014, 4:15 pm

If this isn't for you, go ahead and download anime, I'm not stopping you. :-)I love the included instructions. <https://puu.sh/aGkN0/bdae31fd96.png>

This program has an absolutely amazing loading time. And by absolutely amazing I mean it is absolutely terrible. Fix your search box so people don't have to backspace "Anime Name." I enjoy not being able to double click an episode to watch it. I searched "Dragon Ball Z" and it's been a while. I then searched Evangelion, I got the results of 3 movies and not the actual series episodes. I hope you do some more thorough testing because I can just go to a streaming site and get incredibly faster results for one of the largest anime series to even exist. I literally exited the program but it still ran in the background, what is this?

I cannot even delete the binary folder on my desktop because the process is still on going and it's not even in Task Manager. What is this fishy program?

<https://puu.sh/aGIPA/2b949479b5.png>

So why would you intentionally release something old and broken?

?Tet? - August 5, 2014, 4:58 pm

I like the look of the interface I personally just stream online for the most part I do on a rare occasion

download

when I can't get good enough quality streamed so it looks like you put a lot effort into this, and I'll try it out.

Great work, and thanks for sharing.

NexPB - August 5, 2014, 5:59 pm

Why would people use this over things like XBMC or Plex?

Lyrarei - August 5, 2014, 6:52 pm

(Aug 5, 2014 05:59 PM)NexPB Wrote: [\[CITE\]](#) Why would people use this over things like XBMC or Plex?

Because it looks nice and doesn't have 9999 buttons. depends on the person though, some people like it complex.

ddol - August 5, 2014, 7:29 pm

(Aug 5, 2014 04:48 PM)Nonon Jakuzure Wrote: [\[CITE\]](#) So why would you intentionally release something old and broken?

From his preview, it is not something broken, but yes it is old.

Tweety just didn't add the references to the WMP from VS

Don't really understand why people are basing the OP, simply just adding another way of watching anime. Yes downloading anime, or streaming with adblock is better, but who knows? This can be turned better (should put on github so people can put in pull requests and etc)

Phaxol - August 5, 2014, 7:43 pm

(Aug 5, 2014 04:48 PM)Nonon Jakuzure Wrote: [\[CITE\]](#) So why would you intentionally release something old and broken?

Why do you keep complaining about a free, open source contribution to this section without actually doing anything useful about it like fixing up the source? Just seeking to create drama so you can come off as some edgy "educated" teen on an online forum in the anime section?

OT: Good release OP, fuk da h8rs ?

eight - August 5, 2014, 7:52 pm

Going through the posts in this thread, I'm guessing it's not even worth the time to download this or use it. Adblock does work well, but once this program of yours is updated, then I'll try it out.

ddol - August 5, 2014, 8:03 pm

(Aug 5, 2014 07:52 PM)eightworks Wrote: [\[CITE\]](#) Going through the posts in this thread, I'm guessing it's not even worth the time to download this or use it. Adblock does work well, but once this program of yours is updated, then I'll try it out.

What needs to be updated? It's already working.

It can be improved though.

eight - August 5, 2014, 8:06 pm

(Aug 5, 2014 08:03 PM)Sena Wrote: [\[CITE\]](#) What needs to be updated? It's already working.

He could've just released the source for someone to fix and then they could compile that for distribution. I gave him suggestions on what was wrong, so I did contribute something useful. I noticed a very annoying bug with his program. I literally had to restart my whole computer just to be able to delete the damn executable. Another user experienced a crash with the program. If you're going to release something free, do it right. Don't make other people work to fix your sloppy mistakes because you're too lazy to do it yourself.

This is a bug I was able to reproduce myself three times. Immediately after you close that error debug box, the program shuts itself down.

I have unrestricted access to the internet. In my house, I am the network admin. I doubt my net would block me. I can access the Dragon Ball Z page on animeultima.tv however the program does not let me access it at all. For what reason, I do not know. The program itself is timing out.

It could be your firewall blocking internet access from the application then.

^ This is probably it, so I recommend running it as admin and/or (depending if it works or not) allow it to be ran through the firewall.

Rade. - August 5, 2014, 11:12 pm

seems like a cool idea, might give it a go :D

Just look at the people who immediately resorted to:

"well yeah but why is this truly different from any other anime streaming site"

Tasemu - August 5, 2014, 11:55 pm

Meh they are good guys, just mis-informed on this particular occasion. I'm sure they will understand and put down the o'l pitchfork.

phyy - August 6, 2014, 12:25 am

I like the concept of it but it does have noticeable flaws. No full-screen button any playing/pausing is sketchy, at least it was in my case.

If this receives more updates I'll consider using it but as of now, I think online streaming is just overall more convenient.

Good job OP!

ComplexNumbers - August 6, 2014, 1:08 am

Nice thread layout; and I like the interface.

The software is pretty neat.

For those who are wondering "what is the point in this software when there are ad blockers?" - the answer is: user interface. The user interface on this software is typically simpler than a web browser's. You don't have that address bar or all those bookmarks (I'm not saying you can't hide them). People have different preferences. This also keeps your favourites secure without having to register for an account.

Edit:

(Aug 5, 2014 04:01 PM)Tweety. Wrote: [\[CITE\]](#) Can I ask why this is better than streaming online? Adblock solves the ad issues. You're advertising this by saying 'is your current website slow at streaming?' You're using a 3rd party website yourself.

Nothing personal. But, the answer is user interface. Some people prefer a much more simpler user interface. A web browser typically shows an address bar, bookmarks and so on (although they could be hidden, they are generally not).

Besides, you don't have to load many of the unnecessary elements of a website (e.g. CSS files, page objects, scripts, images) if the software simply grabs the HTML source of a page and filters the list of anime out or downloads the video.

I have a feeling that you were just trying to criticise every single thing just to troll the developer.

Again, nothing personal...

Lyralei - August 6, 2014, 4:42 am

So many negative feedback on something free lol, this is why no one give's out stuff anymore and improve it lol.

i'm honestly loving this release and i like the player it uses (inb4 microsoft) :3

There are 100 skins for xbmc which all look 10 times better then this program ui also xbmc has andriod tv support etc

Edit: I also thought making software like this with java but tbh there is no point trying to compete with the media servers around where you can just write plugins for and let them handle all the backend stuff.

I guess this is fun if you learned alot tru it!

SavageBoys - August 6, 2014, 5:42 am

I had a bash script that used mplayer and did something similar..

I should probably update it to scrape nyaastream for updates and ask to stream the episode automatically.

I'll probably look at the code to see what its written in, I'm guessing something not easily made cross platform?

Edit: Hmm.. could probably do this in python and use pygtk/qt for the interface and mplayer2 for playing the streams.

Lyrarei - August 6, 2014, 5:57 am

(Aug 6, 2014 03:35 PM)King~ Wrote: [\[CITE\]](#) I'm defending it because everyone's being a dick to OP for no reason.

He'll either fix it or not care enough to patch it. He's under no obligation to do anything though, which is what you don't seem to understand.

If you stream, you're going to get a lesser quality than downloading. This is a well known fact, and nobody is claiming this program changes that. Some people stream because of slow internet, and they've got a quality/file-size tradeoff with streaming. Kissanime actually has some very good quality options. Comparing SAO on animeultima and kissanime you can notice the difference. If I had the ability to, I could probably change the code to work with kissanime. It's not that hard to do, from what I know in another coding language. It would just be very tedious work to do since the way he went about it isn't the best.

Tasemu - August 6, 2014, 4:16 pm

Ok yeah, im getting shitty now. Stop being a cunt to the OP, he put this here to share for free, not to have you guys try to force your opinions on his coding standards down his throat. If you dont have

anything nice to say then leave the thread and post somewhere else..... Keep this up and ill junk every flame post in here and throw out a bunch of neg reps.

I dont like this shit at all. Its mean and hurts feelings. It may happen a lot in other sections but I aint having that shit in AA. I thought we were better than that. If i see this shit again in aa ill just junk all your threads ever made here and we can call it a day. Dead serious on this issue.

(Aug 6, 2014 01:02 PM)Nonon Jakuzure Wrote: [\[CITE\]](#) Then how can people help improve the program if his source is unreadable? That's contradictory. I'll stick to downloading and streaming where I can. This program needs to be revamped and I've left my suggestions. He himself said that if someone wanted to implement a download button, they could. If it's so simple, I don't understand why he didn't do it in the first place. Kill two birds with one stone, so to speak. He could've at least let the favorite series feature work before releasing it.

Where is it unreadable?

It is definitely readable if you know how to program. The download button should be simple if he is using the windows player to stream (as it gets the url of the video itself from my experience). I'll put this up on Github and improve it a bit.

EDIT:

<https://github.com/senahf/AnimeSight-Improved>

Added a semi download that'll just open the url to your webbrowser that you can just ctrl+s on.

<https://github.com/senahf/AnimeSight-Improved/blob/master/AASream/Releases/AnimeSight2.0.zip?raw=true>

Vip?r - August 7, 2014, 12:42 am

Thanks a bunch for this, I'll probably edit the code to enhance it to my taste and have it fetch videos from my external hard drive.

The only thing I think should be fixed is the error message followed by the program being shut down when it can't find the anime.

(Aug 5, 2014 04:31 PM)Nonon Jakuzure Wrote: [\[CITE\]](#) Fix your search box so people don't have to backspace "Anime Name."

PHP Code

```
<?php
```

```
Private Sub TextBox1_MouseClick(ByVal sender As System.Object, ByVal e As System.EventArgs)  
    Handles TextBox1.MouseClick
```

```
    TextBox1.Text = ""
```

```
End Sub
```

guard - August 7, 2014, 1:04 am

This is neat, appreciate the work OP.

I can junk split posts. :3

@pervertednidalee: ...Why do i have the feeling this is almost. D:

Evil Corp - August 8, 2014, 11:43 am

Works like charm! :) Thanks for this app.

eight - August 12, 2014, 12:54 pm

So is Sena's version the better one? Does this work good still, like did you fix up the bugs others complained about? I just don't want this fucking up my computer.

I can't tell from the screenshots but is there a fullscreen mode?

As stated in the OP it was made years ago, the code is outdated and will not be updated. You better bet is the other thread.

Yeah, I like the other one, just like the gui/looks of this one better. Alright then, thanks for the help.
