I'm sorry mate I'm not trying to sales trash or anything but fuck leaseweb! I've been hosted with them for less than a month my website was down for more than 30 times in less than a month and each downtime was over 12 hours sometimes for over 24 hours

Anyways even before my new billing rate started the leaseweb had lost my entire database and all the content! I was running a forum and they had lost everything over 30000 members hundreds of thousands of posts and worst of all the banned scammers IP's were gone. That happened right before I was about to sell my forum. I lost thousands of dollars for that, my backup was on the other account apparently it turns out it was on their server as well and was gone as well. Prior all these downtimes they switched the server and same shit. Stay away guys unless you want to be tortured like me. The support was horrible never replied to the support tickets and support chat was unreachable majority of the time. If I would of been hosted with leaseweb in US and that would of happen I'd sue them but unfortunately it was offshore in Netherlands. They fucked me over and I will do the same to them I still had not paid them off.

I did rent dedicated a lot of issues with that and then VPS that had lost my data.

My horror story! My fault for not storing the data on my drive but I couldn't back up not enough space and additionally to that it was down majority of the time so there was no way of using the FTP. My previous host removed my files so I was out of luck sold the domain for 300\$

This looks different as it's dedicated with windows server. I used the web server. Don't get screwed over them by being a reseller. Good luck!

i always use their service,

very very fast service,
performance is great ,
rar and unrar is very very fast ,
uploading speed is very fast to all filehosts , i always get the full upload speed

their servers helped me a lot to make good money from uploading, as uploader needs fast RDP to upload

their prices are damn great !

they are the cheapest service around !!

cheap + great performance, this is what uploaders seek to !!

highly recommended <3

While I am not a regular HF user, I can definitely say that I want to take the time to vouch this service.

For the price, the speeds and the international pings are excessively OP.

The support is also extremely well organized, and they really care about their clients.

I've been with them for a month, and it is very permissive. Maybe too much xD.

I recommend them nine thousand miles per hour. Exceedingly affordable for corporate-ish performance.

The Flash • - October 29, 2014, 8:57 pm

I purchased my rdp tonight and I have to say, it is awesome. The specs are out of this world for the price, and the network is even better. I get 1-2 ping on speedtest with over 700 down and around 900 up. Great service here everyone should take advantage of.

EDIT: Support also installed a program and opened a port for me without hesitation, so they also have great support.

Vouch for OP, knows his business and is as trusted as nice.

That was a tool must require root access but we edited permissions so you could access without any issues but later that caused server down and whole server users faced the same which is not tolerated. And our service provider said that "it was network card related issues caused by recent installed program"

That was the reason we closed the program again.

New slots are available. And we temporary closed selling any slots for 1 year except Xeon1 which will be provided on request only if we think You should get the slot. Rest 5 slots are available at The moment - <http://portal.xeonrdp.com/cart.php>

Teen La Queefa - November 7, 2014, 1:45 am

Despite my previous pleasant experiences with Xeon , this time around it has been quite terrible.

I'm constantly losing connection , lagging extremely bad , sometimes pings are 4000ms
Last night my vps was shut down with no warning and I wasn't able to connect for 2 hours as well.

Hoping these issues are looked at and fixed , I don't want to have to change hosts again :/

Hello,

Yesterday We faced some little issues with the server but server back online without reboot.
Anyway this is abnormal what is happening with you. from our side all and everything is just okay with no complains. Anyway we are rebooting the server for you and let's see if that fixes else we will change your server.

1. I downloaded the file in the RDP.
2. So the upload is from RDP - Filezilla.

4 hours for 100mb+ files. When I do a speedtest, it goes for 500MB upload speed.

Also, I think there's really an issue on the upload on my RDP. I'm trying to upload a 19MB file to PHPMyAdmin, 30 minutes later, the control panel says it timed out and it wasn't able to upload it.

Shouldn't 19MB be less than 4-5 seconds with that upload speed?

I know you are our client but forgot your registered username with us. Kindly provide your email to my PM.

this is not related with only our speedtest. we need to check the provider where were you sending the files from our server. if they receive slowly then our server can't help.

for quickest transfer you need strong network with both network. so we need to check the host where you were sending files.

Hello,

The server you are using is under ddos attack and we sent the server to data center to change an IP address of the server.

from skype logs we could see we already answered you yesterday. we are helpless because the data center is not answering quickly. After all it is Christmas season and i believe they are celebrating their holidays which is the issue we are getting delayed answers from them.

The server is offline now but never provided to anyone else. how you can claim it was provided to anyone else ? we sent informations only to owner's email which is registered with us.

we hard reboot the server and opened the server. Let see how it goes.

Xeonrdp.com never ever scammed a single user and you can search that. I think today the server will be fixed and users from the server will get extra 5 days for this. if you have no plan to wait few more hours then you can take refund from us now.

Also we can show your ticket history here as well since we answered all your tickets in time according to our terms.

Yeah the server is costly. This is how RDP runs. The server is installed in a beast server and resources are shared between them. Accounts are private though ?

You should really create virtual machines for users; and dedicate for example 1GB of RAM to a user

My Vouch isn't gonna increase/decrease the sale. I am now using his RDP for almost 16+ days and it has never been down so far. At first 20 minutes after looking into the RDP I was scared that am scammed. The speedtest result was too low. I contacted him immediately, and he fixed them within 5 minutes. From then to now, I have some speed fluctauations but not too deep. Am a happy customer and I bought my second RDP from him.

Also please note that, he won't give you Admin password to install any new files. But if you download whatever you want and then inform him, he will install that for you. Such a kind guy. He is the 8th Legit person that I have ever met in HF.

Thanks a lot mate :) Will buy more in future

Honestly, These guys are the Best.

I first tried BoomRDP, their Speeds were horrible, not even close to what was promised on their Website, and in their picture.

These guys sell 2x the Better Specs (Ram, HDD Space..)

These guys also have the kindest support staff to help you with your needs.

At the moment it is one guy, but he is much more nicer than the owner of BoomRDP. These guys are your best bet if you wish to make a HQ Game Server, or IRC, or whatever they allow. Dedicated Servers are better, but are more expensive, these RDP's have the feeling of what a Dedicated Windows Server feels like.. Amazing Download Speed, Personal HDD, Online Skype Support and Website Support.

Fact: If you want a great RDP host, with great support, Come to XeonRDP!

You will not regret joining these awesome RDP Hosters.

Best Part, They are Offshore (Good for some allowed BlackHat Activity AKA BruteForcing).

I used this service and let me tell you, Great support, Great owner, Fast internet, EPIC Computers, what else can i say, Cheap prices. You really should think of buying this if you don't have the money to spend on a full ded server around £60 a month. £15 is really a great price.

The only problem i had was another user using a port i wanted to use ? beside that 10/10 IGN! ?

Setup was about a 1 hour.

I believe he was enquiring about how dedicated the resources of the servers are, cpu, ram etc. Probably for re-selling some stuff himself; these would be pretty beastly with a game server hosting company, takes ages setting up tcadmin/gamecp panel along with whmcs in order to automate everything. Would purely be an issue of advertising and traffic after everything is automated. Might need to keep buying more servers manually when sales are being made. Location might play a large role actually, when it comes down to using these servers/rdps as a host for game servers.

//Polarbearz

BITW - March 11, 2015, 7:02 am

@ Polarbearz

Yeah this is RDP not dedicated server but connected with dedicated server. resource abusing is not allowed including CPU/ram/Network.

Kindly let me know how much you need so we can confirm.

Hello,

Sorry for the inconvenience caused. In rural area until Sunday we will be here. getting only 100-150kbps net connection speed that's the reason for slow support responding. On skype there are many pending unread messages. In the meantime until Sunday we prefer you open ticket or email us which will guarantee quick answer/response.

Thanks for your time but we never recommended this for such activities with guarantee . We prefer using webhost.

Also all knows this is not dedicated server so expecting full access is not good.

They have to know what is dedicated server and business RDP. our domain mentioned the RDP as well with that.

In case any user feels this is not suitable with his activities they should contact us about money

back according with our terms so we can fix this.

Example -

in case xampp/wamp shows abnormal messages/errors nothing we can do. users also need to check their(xampp/wamp) supports forum for solution. how a server provider could provide application supports ?

also we know in most cases xampp/wamp did not work but yeah it is working with some users though so we did not mention anywhere that this is disallowed or can not be provided.

Users may require application supports so they should understand and should contact with application owner/support staff.

Cheers

I've been using xeonrdp more than 8 month and the support always help me whenever I need him.

The difference between how good host provider is how good the support to help their client whenever they need him.

If you are looking a good support and active.

xeonrdp would be the best for you.

For best performance our service provider recommended us Winserver 2008 R2 enterprise.

2012 Is latest but this is not always right that latest means best.?

2012 is good but our users and staffs are comfortable with 2008 so far and it is still serving good so we do not think we will change this to 2012 soon ?

Hello,

We are not from NL but our service provider or servers are located in Netherlands.

Let us know. ?

Musa1337 - May 1, 2015, 3:15 pm

I am really wondering which server provider it is because if you look other hosting companies in the Netherlands and you look at their dedicated servers. The cheapest one you can find is 30 euros.

A VPS costs around the 10 euros with 1024MB RAM and 70GB of HDD?

As far as i know it's possible and few of our users ran this in server. We are not specialist in this honestly and can't confirm how many you can run and if the CPU resource will abused or not.

Accounts are private with shared resources(ram/cpu). You will have your personal non shared, private drive to store your data.

These are not dedicated server, They are business RDP.

in Business RDP You can't abuse cpu or RAM usage. if you need Dedicated service then that can be managed where you will be the one who will be using all resources.

If you confirm about your desired future activities in server then i could understand.

I just want to give a review for BITW and the RDP that I bought from him.

I usually do not buy these things just because I have sufficient internet connection. But for 2GBPS, it was such a tempting choice. And I was tempted.

1. Activation was very fast. I paid via Bitcoin, a couple of minutes later I have received my information to my email. Connected to the RDP and there was absolutely no issue.

2. Issue(s) - I experienced an issue today, but this was on the other receiving end. I was wondering why my upload speeds were very low, I thought it was because of XeonRDP but it was actually because of the server that I'm uploading the files to. BITW quickly helped me via Skype.

3. Before he helped me, he asked for verification like my email, username, and etc. This is very good and is a industry-standard of customer verification. Some people would just let anyone in without any verification. I'm glad that he will verify everyone that will try to access anyone's account.

4. Satisfied. I'm very satisfied with the customer service that I have received. It truly was a great service. With this service and this price, you're in for a great deal.

Thanks once again BITW,

Well Guess this is the fastest setup time I've witnissed xD. Server is really quick also did a speedtest well 1071mbps thats enough I guess ?

Thank you

Update: I didn't know I had the share with 20 others and that I wasn't to be able to install my own programs (IPDuc)... Do I need to wait everytime for you to come online to install a program well I wasn't aware of that.

I am sure, you did not wait too long to get that answered. I am assisting from skype. I can assure, you will not get faster supports than ours as a RDP provider.

I think this is already fixed.

Cheap price indeed, interested but would like to ask a few questions if you don't mind.

- Can I buy additional IPs, if so how many and what is the price per IP.
- Would it be possible to get Win 2012 R2 so that I can run Hyper-V (would like to create several VMs), nothing abusive offcourse.
- Not sure if the above work with RDP plans, actually looking if it would be possible with the dedicated server your selling.

Thanks

With Business RDPs, This is not possible. You will have to purchase a Dedicated server for this.

1 IP included. Extra IPs cost 2 EUR each and you can buy as many as you want with per server.

JUst bought a RDP, testing it tomorrow, will update with my opinion and so on. :)

UPDATE:

Quality of server : 10/10 Cheapest most high powered RDP you can buy, you wont get admin rights but that doesnt matter, just ask support and they will run the program needed. But it would be nice with a control panel so you can manage it without contacting support.

Support : 9/10 Support is great, just ask them what you want done and they will do it for you, like port forwarding and so on. But would be a clear 10/10 if it was faster or they added a control panel
^_^

Ease of use: 10/10 Easy, you get an email with login and everything and then you just connect and you're ready to go and the preinstalled programs are very helpful, instead of wasting time installing it

all by yourself.

Overall : 9.5/10 Recommending it for everyone, going to be hosting my gameservers/teamspeak from these servers from now on ;)

We are using NL's high quality Data Centers for our servers so the qualities are great.

Supports are great comparing with other competitors. We are improving this.

Only staff can login into your account if you ask them to do but Logs are not possible to keep.

Outstanding service and customer support. BITW explained me how they work in detail over Skype patiently, and afterwards when I purchased 2 of their RDPs I had NO PROBLEMS at ALL!

Before I used 99rdp, Dedirdp, another RDP provided by a member here, all offshore, and they were absolute crap with horrible service. This is not the case of XeonRDP, so far the best RDP provider I ever saw.

According to our terms - No

It depends.

If abusive reports are generated, you will have to fix them in given time.

Excessively report generating might cause your server suspension.

Thanks.

Hi,

We are offering BOTH Business RDPs & Dedicated Servers.

Business RDPs are with shared resources. 10-12 max active users and most important thing is, we maintain the quality of resource usage so no Overloading should be seen by default.

Within our Dedicated servers, You will have total control + fully unshared resources.

Let me know which offer do you want to go with.

Pretty sure because the dedicated servers are unshared, meaning you get Admin rights and you can do anything. Install anything, do anything, ect whereas in these ones you get basic user privileges so you have to ask BITW when you want to install something that requires admin rights.

Install anything, do anything, ect whereas in these ones you get basic user privileges so you have to ask BITW when you want to install something that requires admin rights.

You are correct. Also 100% privacy protection in Dedicated servers.

Only Resources like Ram/CPU are shared. You will have your private Desktop + Storage Drive. No one should be able to see your process or access into these.

I can assure this to you.

setup my rdp in 5 minutes great service.

Medree - October 28, 2016, 8:13 am

I got my server few days ago and after testing it I have to say I love this service.

I asked him many questions (before and after ordering) and he did always respond in a kind way.

If you have a problem he takes the time to help you instead of sending you a copy paste text.

Overall I got to say that this service is incredible !

Quackles - November 21, 2016, 11:32 pm

User is very knowledgeable regarding what he is selling, he provides fast and responsive customer service and allows customers to receive the best support in the market.

You get what you pay for and value for money, as opposed to competitors which sell dedicated servers and RDP for extremely high prices.

<http://www.speedtest.net/result/5817737705.png>

This is a speedtest result of my dedicated server which I use to provide ATC services for people wanting to cop the latest sneakers, his services always provides me with the fastest speeds and is cost-effective and reliable.

If you're looking for something which is optimised to your needs, honestly contact them and they'll reply to you within a few hours or even instantly with a solution or deal suitable for your needs.

Best services I've been provided regarding dedicated servers and RDP, they've been my provider for a few months now and I have had 0 problems unlike other providers with speed and hardware issues.

This is all about quality & performance. We do not store that much of users on each server. That is impossible for almost any provider.

We maintain the resources usage which keep the server clean and online with no issue in most case.

Some of our servers are online 60+ days without having a single issue.

You can't maintain such quality & performance if you store huge umber of users + can't handle the resource usage.

Because the world is this way.

You can also buy the same iPhone cheaper at some sources.

In OPs service which I bought yesterday, I got a great RDP and great costumer support, I don't mind paying a bit extra for that.

Of course if your source has the same, Its a great service.

but OP can sell for whatever price he wishes to sell, if he does a good job which I think he does so far, he will earn money, so why lower the price? ?

Unfortunately, We do not compete with others. We also do not allow very low budget users as we think that will not maintain the quality of services.

We could have grown the business 3-5x more if we would sell 5\$ per server but that will not bring us quality traffic at all. this is our policy and we are happy with this.

We may sell 7\$ lowest RDP server in near future but that is just a dream which I can't ensure yet.

We are working on new site and we will of course think about this.

So far, 93% clients are happy in last 3+ years if I am not telling wrong.

Thanks for your feedback. ?

Better than any other vps provider that i have seen, most vps providers offer 2 gb of ram 2 cores for 90-120\$/month while xeonrdp offers 64 gb of ram with 6-8 cores for 5-10 euros, which is crazy, the vps is wicked fast and beats every single rdp provider that i have used, that range from the price 10 times greater

I've been using XeonRDP for the past 6 months on and off. Their services are very fast and "gets the job done" plus they are literally 24/7 on Skype for any questions you may have or problems. I had their lowest package and still reached speeds of 300mb/s. At one point I had to take a sudden vacation and I abandoned my RDP and when my subscription ran out they stopped everything and sent me an upload of all my files and was pretty nice of them. The one thing I liked about their service is if they are going to have a shutdown/restart they will notify you through Skype and on the RDP itself and let you know ahead of time.

Pittinger - April 25, 2017, 3:08 am

I've been a client for the past 6 months or so, never had a single problem or a complaint. Few times I messed something up and they quickly helped me over Skype to get things back on track. They even remind me when my next bill is due and send the payment info, which I hugely appreciate because I'm often mobile. All in all, 5 stars from me.

I don't wish to cause any problems or interference and i certainly haven't meant any offense on your service offerings.

Normally I use rdp services for seeding torrents and for the ytmonster client.

If you'd like to try it out and see the impact on a server before I purchase and try it out, then you can do that on any of the servers you currently have active.

Ravioli - May 29, 2017, 11:52 am

This is the WORST fucking RDP service I've ever seen and I hope everyone stops using it. Staff kept blocking MassPlanner 2 with ONLY 9 accounts taking up 20% - 50% CPU (fluctuating) and when I tried to reason with them they closed my account and the RDP. I now lost all my MassPlanner 2 information which I needed.

Thanks you fucking cunts.

EDIT: I saw you read the thread, reply to my fucking PM.

You're a fucking joke. You didn't even have the decency to respond to my PM regarding the issue, just straight up ignored the fuck outta me with no response?

Nice one.

Sir™ - May 31, 2017, 7:52 am

Ive used this service for like a year now, and its been awesome from the beginning, good prices and good support!

Big vouch!

(May 29, 2017 11:52 AM)Ravioli Wrote: [\[CITE\]](#) This is the WORST fucking RDP service I've ever seen and I hope everyone stops using it. Staff kept blocking MassPlanner 2 with ONLY 9 accounts taking up 20% - 50% CPU (fluctuating) and when I tried to reason with them they closed my account and the RDP. I now lost all my MassPlanner 2 information which I needed.

Thanks you fucking cunts.

EDIT: I saw you read the thread, reply to my fucking PM.

I used massplanner with over 50 accounts and didn't get any cries from him, he's good. You probably messed up something man :/

holom - May 31, 2017, 9:16 am

vouch for xeonrdp.com really best rdp i used
the rdp speed is good, customer response very amazing
actually my rdp works from beginning of month to end of month without any problem

i use dedicated rdp for just 24 euro , low money compared to many and really makes me gain lots of money , at least i do all i want as my p.c

You can decide if you do not want to renew from the following month.

You can keep renewing monthly or quarterly or Semi-annually & annually.

Amsterdam, Netherlands.

Yeah, sure. You can download or upload.

I can't see any restriction from our server to your tool. If your tool works properly with Netherlands located servers and Your tool is Win server Version OS'es supported, Why not it work?

Unfortunately, We do not offer any Trial or Demo at this moment.

If your tool is Win supported, i can't see any wrong.

Always willing to help and try what ever he can do in his/her power to make you happy! I have been using this service for months now and have no plans of changing to a different even if it might be cheaper, But for the cost of this RDP Service, is already cheap in my eyes, Plus the Customer Service and help offered, It's a deal. Do not, I repeat, Do, Not, Hesitate to use this RDP Service, You won't regret it. Once again, Thank you so much for this service and good luck in the future, you will always have me as a customer as long as your around!

We don't monitor what is running inside on your rented server. However, we care when you bring abusive notification.

Therefore, I leave this on you so you can decide how it is and if you should rent our service for your activities.

If the tool you use is attached to a virus, your server can be infected.

Would be great if you could post the tools you want to use on the server so we can review and inform you further.

Well I'm just gonna take that as a yes.

And we will take that as a yes from you and you agreed to not bring abusive complaints with your activities.

List of accepted payment methods are mentioned here - <https://rootlayer.net/payment-and-fees/>

If Paypal is not mentioned means we do not accept that.

Thank you.

We have some reasons on why we allow RAT apps but for Botnet activities, we are not the right place for you.

Hello ,

I am interested . Could you please send me a PM & give me your skype id ?

Thanks

And one Question ...Can I use your sever for setup Email server & bulk Email ?

On your website's " Acceptable Usage Policy " page I see that --

3.4.3 – Spamming, or sending of bulk unsolicited email. We maintain a strict policy on spamming, which includes the sending of unauthorized commercial messages by use of our services, or by maintaining an open SMTP connection. We reserve the right to refuse or terminate service based on reasonable indications that you are engaged in spamming of any sort.

Could you please clarify this ?

Thanks

2. Does RootLayer server allow Email sending?

Not all Email sending is counted as “Spamming”. Sometimes, You may Send emails to your Subscribed subscribers, which is not counted as “Spamming” If you know how to do. Make sure to Include an “Unsubscribe Link” Within your messages so those Subscribers, who don't want to receive further/future messages from you can Unsubscribe them from the mailing List. You should have Legit Subscribers and not random ones who can report against you. You may not Attach Phishing link, infection or fraud things with your emails. Some cases are so serious and the Server/Product can be terminated immediately without any prior notice. We keep the environment clean. So, behave cleanly.
