We may not implement chrome but we will do flash which can cover chrome as well. We are also going to refud all the drive bys in a few days.

Wow flash project sounds good, but you didn't answer my question, how long does the FUD last?

I mean, how long will the driveby, exploit, whatever I buy, will last FUD?

Like 1 day or 1 week.

An average ?

Usually a week. We plan on making it last up to 3 or 4 weeks. We're revamping the project. Flash exploit will be more expensive due to being silent FUD. CVE-2014-0497 (Integer underflow in Adobe Flash Player before 11.7.700.261 and 11.8.x through 12.0.x before 12.0.0.44)

Unless you are trusted, we won't accept Paypal. You must use an exchange. It will ask them to enable macro, once they do, it will infect them with your server. You can make the doc macro file from our servers and then add the things you need to make it look legit

Had a similar question in that I wanted to verify how the macro exploit worked because to my understanding they have open the document and click Enable macro and it downloads the exe file then run it right.

Essentially when they open it and don't enable macros it will appear blank but when they enable it will run the exploit and download then run your payload

It has a higher execution, FUD and it's silent. It works on a spectrum of flash versions

Java drive bys, pdf, flash etc.

What if I ever bought a flash bin, how can I get it to work if there's no builder? Do I have to provide a direct URL of my executable and then you give me the "file" with the source code in it? Correct me if I'm wrong.. I'm still a bit confused on how this exactly works and how it is implemented inside a website.

What if my executable starts getting dirty and I want to re-encrypt my file to later upload it again to update the drive by with the new URL? do I have to purchase another flash bin to update? or can I just customize it myself after receiving it?

EDIT: I actually got enough money on paypal to buy this, but still don't know how to exchange/buy bitcoins with paypal.

Only the HTML and SWF file will be provided. You will need to purchase a rebuild, which is 50\$. You should use a crypter with a long FUD time. We would only accept cryptocurrency.

Here's my honest review:

Java - instantly blocked by all browsers even though my java is below the compatible version.

Silverlight - does not work on recent versions as implied by their website.

Firefox - works good. :)

IE - no idea, who the fuck is running IE that outdated?

AdobeAir - Dunno where to put my download url. Think you gotta pay for the builder. Didn't test.

Also, should be noted, all proof of concept videos are 6+ months old. So I wouldn't really rely on those to show that these exploits work. Last thing I want to add, I think most of these exploits are public. I had the java and silverlight ones already.

That is all. Purchase at your own risk.

I am not talking about AV detection. I am talking about browser compatibility. All browsers block the java applet (even when it's the version(s) of java stated on your website) and the silverlight applet installs but does not execute the exe.

We are now releasing XLSM and PPAM Exploits. Doc Prices will go up from here on out, 30\$ for DOCM, and XLSM/PPAM will be 35\$ so will the builder go up in price to 70\$. PDF will be refud soon and Flash is on hold until a new version flash is released just in case of compatibility issues

101% - September 30, 2014, 7:36 am

Okay I have actually seen the download URL link now, but it's not FUD, my exe is FUD but after generating the word from your website I get Avast and one or two other detections as you can see below:

<http://razorscanner.com/result.php?id=594635>

Even the PDF is worse, not FUD at all:

Just sent you a new build right now. Builder and Doc/XSLM/PPAM will change in prices in few hours

jelly07 - September 30, 2014, 12:52 pm

Prices is being updated as we speak, and we got some good news. We are releasing new exploit's: XSLM(Doc Ext. Exploit) , PPAM (Doc Ext. Exploit), and Docm(Refud) Are released. Prices have increased now. 30\$ for Docm, 35\$ for PPAM and \$40 for XSLM. Those three new exploit's can only get obtained off site, so you need to contact me or BigBoss for the new release.

The exploit's will get implemented in 2 days maximum. Those on website is old and NOT the new exploit!!!

When will the builder be updated? Ever since I paid for this I haven't been able to make use of it due to one reason or the other on your part. It's not fair at all. I am still waiting for my copy, mine is not FUD and now you say we must contact you again. If so why did I pay for builder? I have refreshed my mailbox more than 20 times and there is nothing in it.

Okay for the record, I officially declare this service legit. After a little misunderstanding, BigBoss has finally sorted my issues and he compensated by adding 3 weeks to my license as promised.

Although he is yet to update the PDF due to the fact that the module needs total recoding, I confirm the doc, xslm and ppam updates are FUD at the moment. A nice a friendly guy he is.. Thanks BigBoss!

We will be limiting sales to 100 users to prevent saturation of the Flash exploits. Once we sell to 100 users. The sales will be closed for good. 50 spots are up for reservation, at 100\$. 50 spots will be up for grabs after earlier release for people who reserved Note: the 100\$ you pay in advance, will be subtracted from the exploit of your choice when released. I.e 150\$ instead of 250\$.

It is, I have decided to sell the private doc exploit we have.
Also Please do not message Jelly07 he hasn't been online for the past 3 months
We have refudded our macro exploits now, and we only do btc or PM or gift cards

Battlereaper29 - May 17, 2015, 4:24 pm

We're doing a sale for 15% off for the next 12 hours

FreeAnneFrank - May 26, 2015, 2:27 am

When I bought the PDF exploit will it be 6/35 or now eve higher? Also can I crypt it?

MrOrang - May 26, 2015, 3:25 am

Question: How is it possible to make a jdb or sjdb when the latest Java update auto blocks all applets(also self signed) since I do not think you bought a \$400 certificate for these purposes.

Might check it later.

You must of course crypt your file, better as you may pass Anti-Virus for an a longer time.

But I recommend you one of the latest fully FUD but not very expensive the Windows help file .chm exploit.

Selling CHM exploit, FUD, \$45 and \$80 for the builder and selling Document Silent exploit, \$450 a bin and \$1,650 for the Builder. BTC, Perfectmoney or Gift-cards only.

Sincerely
jelly07

Contact me please on Jabber on slice092@exploit.im or Skype tricky.db

We are relying more on file exploits for the moment until over haul or remove certain exploits from our website. Just silver light since it's similar to it

jelly07 - May 28, 2015, 1:52 am

I will be on a vacation from now and until 20 July.

Just because I'm on happy mode I will make an an big discount that starts now and ends on 4th JULY

And that big discount is on 20%!!!!

The 20% discount applies only on our Tricky DB web service.

We're now selling Silent Document Exploit , 450\$ a bin and 1650\$ for a life time builder with free refuds. This is not macro and doesn't require users to click enable macro
We also have powerpoint silent now. 175 a bin and 950 for lifetime builder with updates/refuds. Pm me or my partner.

Is the all browsers working and how does it work with this?

jelly07 - July 30, 2015, 2:22 pm

Yes it work and mostly new browsers good fud.

markcs64 - August 2, 2015, 4:39 am

If you said I scanned on virustotal then get the proof. I used refud.me for this and it was the detection was 24.

I have bought many products here in the HF. and have not had any issue except for Oberon and you.

For all I care you can go ahead and remove all the reps I have but the fact remains that you are a scammer.

You do not have any silent exploit (FUD) so simply remove it from you ID or get going with MACRO.

jelly07 (68) Negative (-3): Salesthreshing and uploading to VT. Be careful before selling to this guy

It is now obvious you and your partner may be the same person or you both are just scamming people of their money in the name of office exploit.

Read before dealing with this toddlers jelly07 and P??cho M?ntl?, they are scammers.

It does not work. They are scammers.

The moment they collect your money they will say you scanned on Virustotal. Do not buy from them unless they agree to use escrow.
