Thread: [No internet after uninstalling Comodo](#)

Retrox - August 10, 2014, 2:28 pm

So I guess I didn't uninstall Comodo Firewall correctly, though I used the uninstall tool that came with it. Does anyone here know how to fix this? Would be greatly appreciated, thank you.

Antigen - August 10, 2014, 2:31 pm

Why do you think that something went wrong ? You might have uninstalled it correctly as because you used the tool given by Comodo.

Edit: Thanks for adding "No internet after uninstalling Comodo"

Most of the information I found trying to fix this with Google said it probably didn't uninstall correctly. I really hope that's the case, because if not I have absolutely no idea what's wrong.

Bob White - August 10, 2014, 2:43 pm

This happen to me too. I ended up reformatting. Good luck to you.

Ryan Cleary - August 10, 2014, 2:47 pm

Here you go, this should fix it:

<https://forums.comodo.com/install-setup-configuration-help-cis/uninstaller-tool-for-comodo-products-t71897.0.html>

Antigen - August 10, 2014, 2:49 pm

Let's reset Internet connection.

1. Click on Start button.
2. Type Cmd in the Start Search text box.
3. Right click cmd and select "Run as administrator" to run Command Prompt as Administrator. Allow elevation request.
4. Type "netsh int ip reset c:\netreset.txt" in the Command Prompt shell, and then press the Enter key.
5. Restart the computer.

The command will remove all user configured settings on TCP/IP stack and return it to original default state by rewriting pertinent registry keys that are used by the Internet Protocol (TCP/IP) stack to achieve the same result as the removal and the reinstallation of the protocol.

Retrox - August 10, 2014, 3:10 pm

None of the above worked and my recovery disc is at my friends house. This is going to be a long week .. Thanks anyways guys.

my friends house. This is going to be a long week .. Thanks anyways guys. Good luck recovering with disc. Feel free to Post/PM if anything comes up.

Aura - August 10, 2014, 4:52 pm

May I give a try now ? ?

OP, download and execute [MiniToolBox](#). Check ALL the cases till List Installed Programs (check this one as well) and click on Go. Once done, copy/paste the content of the output log on Pastebin and post the link.

OP, download and execute [MiniToolBox](#). Check ALL the cases till List Installed Programs (check this one as well) and click on Go. Once done, copy/paste the content of the output log on Pastebin and post the link. It's a bit tedious installing programs and uploading logs because I have to use my phone to download the installer and upload the logs, but I'll definitely do this when I get back from school tomorrow. Thanks Aura.

Edit: It would be easier if I did this right now. <http://pastebin.com/eA5u2hTG>

It's a simple stand alone application, no installation required ?

Xycon - August 10, 2014, 9:08 pm

This is actually the reason I stopped using Comodo firewall about 6 years ago.

Updating it/installing it/re-installing it/repair.

All fucks up your connection, and being a bitch to fix.

Was working fine before, but ever since they renewed the interface and what not back then it became a huge pain in the ass and just not worth it compared to other programs out there. Never liked the program anymore after that.

Don't know much about it these days, but things apparently haven't improved much.

Retrox - August 14, 2014, 3:37 pm

Still haven't resolved the problem.

coco69 - August 14, 2014, 3:42 pm

comodo usally changes your dns settings for their own

try using google dns servers I believe they are

8.8.8.8

8.8.4.4

8.8.4.4

These are the correct servers.

There's also a documentation on how to proceed here :

<https://developers.google.com/speed/public-dns/docs/using?hl=fr>

Wait what? How can you use the Internet when the title is "No Internet After Uninstalling Comodo"?

Aura - August 15, 2014, 3:19 am

(Aug 14, 2014 10:40 PM)Spider86 Wrote: [\[CITE\]](#) Wait what? How can you use the Internet when the title is "No Internet After Uninstalling Comodo"?

... He's most likely on his phone or another computer that he have.

Was that REALLY a question ?

Retrox - September 26, 2014, 3:32 am

Would booting from an Unbuntu CD give me access to the internet on my old computer or is the problem with the system itself, not the OS?

Sparkfear - September 26, 2014, 3:09 pm

If you would ask me, yes that would work.

If you would reinstall windows it would work again too right?

Freebooter - September 26, 2014, 5:10 pm

Uninstall the network card driver and install latest version of the network card driver.

Open the Command Prompt as a administrator and type below command one by one.

```
netsh int ipv4 reset
```

```
netsh int ipv6 reset
```

```
netsh int portproxy reset
```

```
netsh winsock reset
```

Restart your computer if the problem has not resolved then click Start Menu --> Control Panel --> Network and Sharing Center --> Change Adapter Settings. Find the network card and right click on it select Properties. In the list, click Internet Protocol Version 4, then click Install button. Select Protocol, and then click Add click Have Disk. Browse to the location of C:\WINDOWS\inf\nettcpip.inf . Select nettcpip.inf file then click Open then OK then select Internet Protocol (TCP/IPv4) then OK then Close and Reboot.

Turtle™ - September 28, 2014, 4:57 pm

Is it possible that something may have went wrong with your network drivers? If that might be the case, it is usually a simple matter of looking at your computer model (Right click "My computer" button and hit "properties" and scroll down a bit) and downloading the network drivers from the website of your computer manufacturer.

Don't always just jump into reinstalling windows. You can often save yourself a lot of time by thinking of alternatives.
