Thread: [Man uses cat to map WiFi networks](#)

Machiavellian101 - August 11, 2014, 9:31 am

Recently a security researcher thought it would be an idea to use his cat to search for easily hackable WiFi networks. He also discovered upon this research that there were a lot more open and WEP encrypted networks than what there ideally should be in 2014.

you can read more about this [HERE](#).

Imagine if it was used on a bird. That would be crazy.

I am a carrier pigeon handler for a living. Totally want to try this.

Poper21 - August 17, 2014, 4:44 pm

or with couple rats maybe? :D i think bird would fly too high :D

That cat must be a walkerholic... great thinking though

Rote - August 18, 2014, 11:30 am

Haha this is awesome. The hacker cat. ISP's should really step up there game and update costumes routers.

Machiavellian101 - August 18, 2014, 2:53 pm

Guys remember that this would only work if the animal is in range. This cat was obviously quite close to home. Even so it was a nice idea.
