Thread: [BC SSH - Open Source C# SSH Client](#)

burning_cake - August 12, 2014, 6:39 am

Hello Hackforums!

i decided to register here and post my project i am working on at the moment. I have no problem to say that i am using a library i found on codeproject but the client itself is made by me.

So what is working already in the current release?

- Connect with SSH2 protocol to a server
- Change Fore & Back colors of the terminal
- check for update function
- viewing the current changelog
- Adding and removing tabs (multiple session support) !
- the library DLL is embed in the main program so you dont have to ship 2 files . just compile the exe and it will be fine.
- Save & Load user settings
- Random movie quotes in the applications title :)

and some more.

What will come soon :

advanced selfupdater

add telnet connection option

save design options

paste from clipboard

fix save & load settings

Heres a basic screenshot , more can be viewed at my website.

The source code & pre compiled exe can be obtained [HERE](#)

(Original ssh library i use

<http://www.codeproject.com/Articles/20781/Terminal-Control-Library-C-VT-ANSI-XTERM-SSH-Te>)

I just thought some of you guys would like to see this here because it's something other than RAT's and crypter's and webbrowser's :)

Also i would be happy if you could reply your opinion on this so i can take some advices for the next version .

Thank you for reading my thread, have a nice day!

Here is the current changelog :

```
Code _____ - -
| _ \ / _ | / _ | _ | | | | | |
| | | | | ( | ( | | |
| _ < | | \ _ \ _ | _ |
| | | | _ _ ) | | | |
| _ / \ _ | | _ / _ | | |
```

-- The Tiny Free and Open Source SSH Client --

BC SSH is based on TC from Columbus-MCSD

/////

Symbols : + (Added a new feature) - (removed something) * (Improved or changed)

Changelog 0.2 - 0.2.1

- + added more icons
- + added application icon
- * merged the TC.dll into the assembly
- * made the debug panel invisible

Changelog 0.1 - 0.2

- + added random movie and other quotes to be shown as the main forms name
- + added 13 quotes
- + added setting "Let's be funny" wich toggles variable "befunny" wich sets if the random quotes will be enabled or not.
- + added check for update button in update form
- + added new icons for menustrip
- removed Filestrip in menu strip
- * put update & about item in from filestrip to the main menustrip
- * made the connection settings form smaller and redesigned it a bit
- * changed design of the update form a bit and disabled the download new version button as long as theres no newer version online
- * changed about text at aboutform

Changelog 0.0 - 0.1

- + added show password option
- + added menustrip
- + added about form
- + added baisc version check function
- + added fullscreen support
- + added icons in menu strip
- + added messagebox when clicked skin options while not connected to a server
- + added multiple tab function
- removed old buttons and textboxes
- * changed default forecolor to white
- * improved connection with a try function to catch a error when the user did not entered his account information
- * changed the server information input to a form
- * redesigned the GUI a bit
- * fixed a bug where the program crashed on pressing connect
- * turned off a function that created a folder and a cfg file

do u mean

<http://www.codeproject.com/Articles/11966/sharpSsh-A-Secure-Shell-SSH-library-for-NET>

its old look

SharpSSH > <https://www.nuget.org/packages/Tamir.SharpSSH>

or

<https://sshnet.codeplex.com>

No , the library i use is linked in the about form of my client :)

ill edit the link in asap

Hello

It seems like a pretty neat and nice project !

Good Luck with it.

Thanks alot Cisteriaso ! i havent payed much attention to the design yet but i decided to NOT use any themes on this application because i really like the default look of windows programmes :P

Thanks for your comment
