CLOSE IT,
JUST FOR DAMIEN

GenericSkid - August 12, 2014, 8:34 am

Can you tell us what the crash is? It'd be much easier to diagnose the problem if we knew whats wrong.

?I??? ??t - August 12, 2014, 8:39 am

its crash because its dont find anythink on port 8080
the port is open but i cant send to anythink
than it crash
so i need to test if somethink on port 8080
how can i do this ?

SIM-1078643 - August 12, 2014, 11:32 am

Code Try
client.connect("127.0.0.1", 8080)
Catch ex as exception
'connection failed
End TryNot sure if this is what you mean.

Marwix - August 12, 2014, 11:47 am

You can always use Try...Catch statement to retrieve the problem that occurs when the function is called. Take a look at the link below:

MSDN: <http://msdn.microsoft.com/en-us/library/fk6t46tz.aspx>

Odus - August 12, 2014, 11:48 am

Are you sure you've copied and pasted everything correctly?

Well don't forget you have to fit the code in to what you already have. If that still hasn't solved your problem then trap the error and find out what it is. Then you can try and pinpoint what's causing it to crash.
