Thread: [Typed passwords on chrome or mozilla](#)

**BLACK JAK** - August 14, 2014, 3:38 am

Is there any method to get the typed passwords on chrome or mozilla. I don't need a answer like inspect element..The password typed on the computer only once, and I have access to the computer but I don't know how to get the once typed password.(The password isn't stored or saved) Any help?

**AURUM** - August 14, 2014, 4:41 am

umm. Was it saved in the saved pass forms? If not then you will be fucked,

**h4xer** - August 14, 2014, 4:44 am

keylogger would help ? if the passwords are stored in the browser

**avi1574** - August 14, 2014, 5:32 am

There is some really amazing JavaScript keylogger's.

<http://sourceforge.net/projects/jskeylogger/>

If the password is saved into the browsers database then you can retrieve the password from there, browsers behave differently for storing passwords, on windows they often use the users NTLM (windows) password to encrypt the password database for the browser, so you need to be legitimately logged in as them to get it.

You can dump the windows LM or NTLM hashes and brute force them to find the plaintext then use an appliction to read the password file, Nirsoft do a good free tool for most of the browsers, the chrome one is here: <http://www.nirsoft.net/utils/chromepass.html>
