Thread: [Squirt - Read online articles at 450 WPM](#)

SIM-1550131 - August 14, 2014, 9:35 am

<http://squirt.io/>

I just found this website and its pretty cool! It has a bar at the top of the screen if you launch the javascript (will explain later) and will slowly speed up the WPM in which you read the article. It will isolate one letter in the word and you can read the word without moving your eye and I found it pretty cool! You just click "try it now" and it gives you a little example. Once its done it brings you to the install page and all you have to do is drag the "Squirt" button to your bookmark tab and it will copy the javascript file there. You should check this out haha its pretty nice.

Here is a video tutorial on how to install it:

Waah, this looks quite cool. Going to look into this. 450 wpm is hella fast though.

Supreme??????? - August 14, 2014, 9:36 am

Dang, that's a pretty nice find OP! Very interesting.

Spritz is a company working on this, has been for awhile. They have their own bookmark tool that

can be found [here](#). You're also able to develop your own things and read at a much faster rate than just 450 WPM.
