Thread: [\[TUT\] How to set up and crypt njRat with Cyber-Seal](#)

Retaliationist - August 14, 2014, 2:43 pm

Hello Everyone, I think that this can get very confusing for some people especially beginners. I am going to do a Tutorial on How to Encrypt njRat with Cryber-Seal. How I build the stub for njRat is pretty much the same way you do it with all the other RATs out there. Lets get Started!

First what you are going to need to do is open njRat, it will ask you what port do you want to listen to (which is normally 5552). You may be wondering "I set it up correctly, but it isn't working?" That may be because you have not Port Forwarded whichever port you selected on your router. This is how you Port Forward for Linksys Smart WIFI, your configuration for your router may be different. You can look up how to port forward for your router on youtube.

You need to enter your Default Gateway into a web browser URL, this is how your Default Gateway.

When you hit enter this shows up, and you scroll down a little and there it is.

Then you copy the Default Gateway into a URL

When you log in, you should see something like this. Go to Security

Then go to Apps and Games

Then go to Port Range Forwarding

Then you should see this, click Add new Port Range Forwarding

Then you enter the Application Name, Start and End Port, and Device IP.

That was the hard part ? now that you have your desired port forwarded on your router, now its time to build the stub.

First you are going to have to open njRat and type in the port that you forwarded.

Then you click on Builder at the bottom

You want to make sure your settings look something like this, for the Host you put your real IP address there. You can find your IP by going to www.whatismyip.com

You need to save it somewhere on your desktop as whatever name you want

You should get something that look like this on your desktop

Now you need to open up Cyber-Seal and Browse for your stub that you just built

You have to go see the rest of this Tutorial on Part 2, this is because I had too many images. (Leave comments on PART 2)

DNS' are optional, however they are recommended.

Retaliationist - August 14, 2014, 9:15 pm

a DNS isn't required, you can use your regular ip, but a DNS just keeps your ip hidden.

It doesn't actually keep your IP hidden. It just makes it so that if your IP changes, you can get your connections back.

????? ???? - August 14, 2014, 9:32 pm

Dedicated IP or DNS would be the best choice .

loveislove - August 16, 2014, 8:08 am

i creat stub puting my real ip and test it on my pc its not work and when i test it on other pc its work its that ok ?

Your router doesn't allow NAT loopback. It's normal. Nothing to worry about.

Can i get a download link for cyber-steal

Retaliationist - August 22, 2014, 5:00 pm

You have to buy Cyber-Seal from here <http://cyber-seal.org/>

anonymous.1.sy - August 22, 2014, 11:14 pm

You have to buy Cyber-Seal from here <http://cyber-seal.org/> nothing is free !!

thanks you

blazelord - January 7, 2016, 4:40 pm

where do i get njrat from ????

RatB0y - July 2, 2016, 12:08 pm

doesnt even work so request close.

joe9s - July 4, 2016, 7:17 am

Thank you for this detailed tutorial

JasonSoModz - July 4, 2016, 4:32 pm

Will follow this because I need a crypter and was looking for a tut, thanks!

OopsImGreat - July 27, 2016, 4:32 pm

Really geoduck tutorial, helped me a ton! Can't wait to try it out tonight :)

AsrielLockhart - August 5, 2016, 12:53 pm

My Gateway isnt showing can anyone tell me what i need to do

pwntoken - November 2, 2017, 5:46 am

where do i find cyber steal?
