Thread: [\[TUT\]Crack Windows 7 Administrator Password Without Any Software!](#)

D4T4B4S3 - August 16, 2014, 4:20 pm

Hello Hack Forums ?,

Today, I will be telling you all about a vulnerability on Windows 7 Systems, and I will be teaching you how to use this vulnerability to bypass Login Screen, and grant admin access.

Lets get into our easy tutorial..

1-Accessing The Startup Repair Menu

Alright, what we need to do on our tutorial is, we need to launch the startup repair menu on Windows 7. Force shutdown the computer, and when the black background loading screen comes up, choose Launch Startup Repair. (if it is not there click CTRL+ALT+DELETE and repeat that until it appears).

Spoiler [\(Click to View\)](#)

Alright, now let it load and wait a bit until a popup comes up saying "Do you want to restore your computer using System Restore?". Just click cancel and wait a little bit more...

Alright now another error should pop up saying "Startup repair cannot repair this computer automatically". That is a good error, lol. Now click "View Details" and scroll down to the bottom and click the last linked-text.

Spoiler [\(Click to View\)](#)

Notepad should pop up! Aha, we can exploit from notepad now...

2-Accessing System32 From Notepad to Exploit

If you could come here smoothly, you are good to go. On notepad go to File - Open. Ta-da! Alright now, change "files of type" to "all files" and lets explore a bit.

Go to Computer and then C:\Windows\system32. Now scroll down a bit to find "cmd" and copy it.

Spoiler [\(Click to View\)](#)

Now scroll down to find "sethc" and rename "sethc" to "sethc1"

Spoiler [\(Click to View\)](#)

Okay now get to your "cmd copy" and rename it to "sethc".

Spoiler [\(Click to View\)](#)

to:

Spoiler [\(Click to View\)](#)

GG.

3-Getting in Admin Account

Alright, all the annoying parts are done. Now lets have some fun. Reboot your computer, and on the login page click "shift" 5 times. A cmd with system32 should pop up! You can do whatever you want now, lets open explorer.exe.

On the open cmd windows type in "explorer.exe" and windows bar should appear on login screen. Lets change admin pass now.

On the cmd window, type in "net user". Users should appear... Now type in "net user Administrator *". It should ask for a new password now. Type in your password(it won't be seen). And activate the

admin account, by typing "net user Administrator /active".

Now you can login using account Administrator and your own password and have full access.

Alright, thats it for this simple tutorial guys. Hope I could helped, and if you have any questions you can ask them here.?

Have Fun! ?

Yorkiebar15 - August 16, 2014, 4:27 pm

Nice tutorial, but a few points;

Some of the text is hard to read (dark blue mainly).

Step 2 almost definitely needs a screenshot - it's a bit confusing :P

Other than that, nice HQ post.

Thank you very much bro, fixed everything now. Hope its easier now! ?

kradsken - August 17, 2014, 6:17 am

this have been around for like a year, thanks for sharing it though. If anyone wants a video tutorial you get one in the link below

<https://www.youtube.com/watch?v=iZQHK7EU3BA>

Thank you for the comment :) You are welcome ?

SIM-2396742 - August 17, 2014, 6:53 am

Hey very nice Tutorial but i have a problem:

Everything works but when i want to log in the password is everytime wrong.

Why?

Greets,

D4T4B4S3 - August 17, 2014, 7:04 am

Why?

Greetings,
Open cmd again by clicking shift 5 times.
On the cmd windows type in net user Administrator *
Write your password there (for example test)
Now activate it by typing net user Administrator /active
go on username and type Adminsitrator
and your password you just made.

thanks! any more questions? ask meh ;p ?

Hopsin - August 17, 2014, 7:05 am

This was an weird tutorial but thanks nonetheless.

runa78 - August 17, 2014, 7:07 am

Nice tutorial, will use this next time when I don't have my usb stick with me that I use to boot up and change the password with a software ?

tired- - August 17, 2014, 7:28 am

Oh cool, testing this tomorrow for sure.

Thanks OP!

Thank you very much dude! ?. Made my day ?

Good luck and have fun with it :D

Spexxy03 - August 18, 2014, 6:07 am

Sorry if this is stupid or so!

But doesn't it erase pretty much of the vital information that you've could have some use for? Cause I have done a similar thing. And it erased pretty much everything that I needed on my computer.

But still! This works 100 %! :) Keep the good work up!

D4T4B4S3 - August 18, 2014, 6:45 am
