Nice to see a new thread, never really used your service but it seemed like you helped many members :)

daviduk - August 17, 2014, 6:30 pm

<https://hackforums.net/showthread.php?tid=4310129>

Could you tell me if the above RAT could infect a specific mobile by the user opening a jpeg with the virus attached?

xVulnerable - August 17, 2014, 6:33 pm

(Aug 17, 2014 06:30 PM)daviduk Wrote: [\[CITE\]](#) <https://hackforums.net/showthread.php?tid=4310129>

Could you tell me if the above RAT could infect a specific mobile by the user opening a jpeg with the virus attached?

I'm not very familiar with Android RATs, however i'm sure that would not be possible. You will most likely have to bind it with an app.

daviduk - August 17, 2014, 6:40 pm

(Aug 17, 2014 06:33 PM)xVulnerable Wrote: [\[CITE\]](#) I'm not very familiar with Android RATs, however i'm sure that would not be possible. You will most likely have to bind it with an app.

So i'd have to get the target to download a specific app? so how do people do this without it being suspicious?

Seems really obvious to me

xVulnerable - August 17, 2014, 6:53 pm

Ok, thanks for your help anyway, i'll just hope he replies cause i can't PM,

Thanks.

Grim - August 17, 2014, 7:19 pm

vouch for xVulnerable hes helped very many people on this forum :)

BioSpectre - August 17, 2014, 10:01 pm

hey xVulnerable, I have two questions. One, which crypter do you recommend that is free and which crypter would you recommend paid? I have tried using Aegis Crypter but it seems like the only way the crypted file becomes active is when I don't have any features checked off. So like, disable firewall, hide file, start up, etc. But when I started using LaCrypter by a user from HF, my crypted rat seems to have complete functionality. Could I be doing something wrong with Setting up the RAT and Crypting it with Aegis? Second, sometimes when I test the RAT the slave doesn't pop up on Dark Comet, but it shows up as process in Task Manager. Any help would be greatly appreciated! Thanks!

xVulnerable - August 17, 2014, 11:48 pm

I recommend jSpy because it's a stable, FUD and don't need to be crypted. If nothing pops up it's either being detected or not setup right.

Captain Steve Rogers - August 17, 2014, 11:51 pm

Vouch for xVulnerable, He knows his stuff very well.

Dr Greenspoon - August 19, 2014, 4:04 pm

i just waste 10\$ on buyin bots and is lost.

i set the rat find and my port open
and bots dosent connect
only my pc can connect

plus cant download your rat from net
the anti virus is start to change a colors.
is not fud!!

[jSpy]

ManOfTheMountain ?

Possibly.

Fredo - August 24, 2014, 7:25 pm

Can someone help me? I got DarkComet to work, and it connected to my friend's vm, but after I got a bluescreen and restarted, it won't connect with any rat I try. Can you help me?

Roofiezz - August 24, 2014, 7:30 pm

hey mate. I think igot my DC all up and working I can see my self on it, just want to see some test installs before i purchase a crypter ! cheers

techy1 - August 24, 2014, 7:31 pm

This is a direct copy and paste from my post i made

Hi! I was testing jSpy today on a computer (my computer). I told him to open up the Steam hacks (RAT). When it didnt open he thought it was nothing. After he could easily end the task of the RAT and I no longer had connection. Also I tried putting the RAT on my mac and it didnt let me. Can someone send me settings of what they did or something so I can have it so the RAT cannot be found after opening and so that whenever they restart their computer or when I restart mine they are still my slave and on the clients list? Also what is the startup and stealth mode on jSpy? Thank you guys!

xVulnerable - August 25, 2014, 12:39 pm

Make sure to enable startup. That basically means the server starts automatically upon computer restart. Use stealth mode when running on mac.

(Aug 24, 2014 07:25 PM)Darb Wrote: [\[CITE\]](#) Can someone help me? I got DarkComet to work, and it connected to my friend's vm, but after I got a bluescreen and restarted, it won't connect with any

Hia! I'm trying to portforward a BT Home Hub 3.

I have assigned port 1604 to UDP And TCP, And added it to my static IP, But port 1604 still is blocked through canyouseeme.org

poufpater - August 28, 2014, 12:09 pm

Hello

I just recently got started with RATS and purchased IM3.

I managed to follow some simple guides to get a dynamic dns from duckdns built a client and sent it to a couple of people.

when my first target ran the server files, he detected it was a trojan barely 10 mins after execution. The RAT worked, i managed to poke around in his machine, look at his key strokes etc, remove view the desktop and so on but a few mins later it got detected.

the next time i tried it , i got it encrypted with Live crypter and tried again with a different person, got executed and popped up in IM3 on my side, but as soon as it was executed my friend said he his pc detected it as a trojan.

I dont really know what i did wrong on the second time :/

can you give me some help?

Oliver Sykes - August 28, 2014, 1:01 pm

Well, it could be that the crypter itself is less FUD than the IM3 builder. I'd scan it on fuckingscan.me and posts the results if I were you. If it has any under the AV he uses, too bad. Also, make sure the crypter is scan time as well as Run-time FUD.

Your crypter needs to be FUD, even then it won't bypass all AVs but it will bypass most of them. You should purchase jSpy as it's 100% FUD, does not need any crypter and bypasses all AVs.

(Aug 28, 2014 02:55 PM)fighttillwegetright Wrote: [\[CITE\]](#) Alright so im trying to use dark comet and like its not working i mean i portfoward and i set my ports right but when i send a file to victim and tell them to disable there anti it wont show them connected on my user list so please help am i portfowarding wrong i used the default port "1604". on dark comet i admit im a mega noob on ratting people so some help would be awesome

Suggest a free undetectable remotely installable RAT that should be configurable on Windows XP machine but installable on a targeted Mac OS to monitor key strokes, etc. Also, explain how to install on remote mac without having physical access to it. RAT should get installed bypassing the anti-virus / security software on Victim's machine?

Also, Suggest a free undetectable remotely installable keylogger that should be configurable on Windows XP machine but installable on a targeted Mac OS to monitor key strokes, etc. Also, explain how to encrypt the keylogger in a .jpg image file to send to a victim using skype. Once he executes on his Mac machine then it should get installed bypassing the anti-virus / security software.

fighttillwegetright - August 30, 2014, 11:04 am

Can you help me set up my dark comet and test it add me on skype:

|HeavilyStuffed|Divian|Sle_Pharaoh|

Only FUD RAT is jSpy, for others you need to buy a crypter.

You can't change it's extension to image extensions.

TheSatanist - August 31, 2014, 1:28 pm

If, for instance, I was to create a Java program or whatever and include the RAT in the download, I suppose theoretically I could launch the RAT from within my game's .jar file? Would the RAT work that way?

Stuxie - August 31, 2014, 3:11 pm

What is the most "aggressive" RAT? In a situation where I'm infecting people that are probably already infected or will soon be infected by other RATs, which RAT wins?

Oliver Sykes - August 31, 2014, 4:03 pm

Well, [l]nsanity has put a lot of botkillers into Alethia. I think he said you can pm him to get the beta, since the C++ Recode could take a yr or two.

xVulnerable - September 1, 2014, 12:09 am

(Aug 31, 2014 01:28 PM)TheSatanist Wrote: [\[CITE\]](#) If, for instance, I was to create a Java program or whatever and include the RAT in the download, I suppose theoretically I could launch the RAT from within my game's .jar file? Would the RAT work that way?

Yes you can bind it.

(Aug 31, 2014 03:11 PM)Stuxie Wrote: [\[CITE\]](#) What is the most "aggressive" RAT? In a situation where I'm infecting people that are probably already infected or will soon be infected by other RATs, which RAT wins?

A computer can be 'infected' by two RATs at a time. However it can be botkilled. So theoretically you need a good anti-botkill. RATs can be easily killed, unlike HTTP botnets like betabot.

xVulnerable - September 5, 2014, 7:28 am

Still offering help, feel free to post any questions.

waterbottle - September 7, 2014, 7:24 am

I tried setting up njRAT but I just can't get it working.

I am using a VPN and also used an open port. Sent the rat to some bots and even tried it on my own virtual machine, it just doesn't work.

Also tried using no-ip.com

Do you have an idea what might be the problem?

degado - September 7, 2014, 7:56 am

open the prots corectlly my nj woriing but crypteed does not work jus I am not showing up but with none crypted I am ok

Happy Nerd - September 7, 2014, 8:06 am

Can we talk in skype I have some questions about IM3 and my crypter also for my vpn settings..

Im looking forward ?

Is your port open on www.canyouseeme.org?

EatedCookies - September 8, 2014, 5:13 am

I could use some help here.

I'm using darkcomet, and I've been testing the rat in my VM and on a computer on a shared network.

However darkcomet isn't picking up any connections.

I've tried using No Ip's dns and 127.0.0.1, my ports are forwarded but I'm not seeing any results.

I've tried using with and without a crypter, no results.

I have disabled my firewall, windows defender, and avs. nothing.

what am I doing wrong?

xVulnerable - September 8, 2014, 7:22 am

Depends on the binder.

EatedCookies - September 10, 2014, 6:50 am

(Sep 10, 2014 05:34 AM)xVulnerable Wrote: [\[CITE\]](#) Test it on another computer then or a VM.

I did, I said that in the my first post. I tried it on another computer running DC in my VM and on my computer. I tried it on my VM, running DC on my VM and my computer.

akosicamar - September 10, 2014, 6:56 am

What If I buy this.. can you setup this for me for free ? since I am a newbie on this RAT thingy ?

Dagh0st - September 10, 2014, 8:56 am

which binds do you suggest?

are we aloud to post our server here for testing?

Joann - September 10, 2014, 9:36 am

what is the best free rat

and best paid rat

and best crypter works with .net rats and normal rats

xVulnerable - September 12, 2014, 3:29 am

(Sep 10, 2014 06:56 AM)akosicamar Wrote: [\[CITE\]](#) What If I buy this.. can you setup this for me for free ? since I am a newbie on this RAT thingy ?

I offer full RAT setups for \$10.

(Sep 10, 2014 08:56 AM)Dagh0st Wrote: [\[CITE\]](#) which binds do you suggest?

are we aloud to post our server here for testing?

Most crypters have binders inbuilt.

No & i only test servers for upgraded members.

(Sep 10, 2014 09:36 AM)Joann Wrote: [\[CITE\]](#) what is the best free rat

and best paid rat

and best crypter works with .net rats and normal rats

I prefer jSpy.

It's FUD and you don't need a crypter.

xVulnerable - September 13, 2014, 5:46 am

Currently online. Feel free to post any questions.

xVulnerable - September 15, 2014, 4:13 pm

Still in business folks, post your questions!

K?i?K - September 16, 2014, 12:42 pm

Hey, Looks interesting. Well the thing is I am back to HF after a long break of 2 years i really dont remember much of ratting however i somehow setted up a cybergate But aint got any slave for testing. FOr manual testing, It doesnt works on myself so maybe you can help me with 1/2 slaves? That would provide a great help. Thanks in advance

KrypTiK - September 16, 2014, 4:16 pm

I need some help with my port forwarding. I've port forwarded and tried letting it through my antivirus although I couldn't find any settings for it. I have tried disabling my av but still nothing works. Any help would be great!

xVulnerable - September 16, 2014, 4:17 pm

(Sep 16, 2014 04:16 PM)KrypTiK Wrote: [\[CITE\]](#) I need some help with my port forwarding. I've port forwarded and tried letting it through my antivirus although I couldn't find any settings for it. I have tried disabling my av but still nothing works. Any help would be great!

Uninstall your AV rather than disabling it.

KrypTiK - September 16, 2014, 4:21 pm

(Sep 16, 2014 04:17 PM)xVulnerable Wrote: [\[CITE\]](#) Uninstall your AV rather than disabling it.

Well I thought about that, but I first would like to try any other methods someone might have before doing so...

35 Characters. Oh. Yeah.

Read the thread maybe? Don't ask for test installs if you're not upgraded.

Dutch_Apple - September 19, 2014, 11:19 am

Hi there, trying to decide which RAT to get, was thinking jSPy because of compatibility with many OS and its features including FUD etc.

Was just wondering, with jSPy (or any other rat i guess) Is there a easy, free way to mine currency to make money from slaves? or ad clicker or something without them knowing?

Thanks in advance :D

xVulnerable - September 19, 2014, 12:28 pm

(Sep 19, 2014 11:19 AM)Dutch_apple Wrote: [\[CITE\]](#) Hi there, trying to decide which RAT to get, was thinking jSPy because of compatibility with many OS and its features including FUD etc.

Use png to ico converts.

(Sep 19, 2014 06:09 PM)biggbubba00 Wrote: [\[CITE\]](#) when i try to run the client.jar file i get this message "Could not find the main class: com.client.Client. Program will exit. do you know what it is im doing wrong?"
Something must be wrong with your Java, try reinstalling.

Numnizzle - September 21, 2014, 11:28 pm

Figured I'd give this thread a shot, I'm using Darkcomet and everything seems to be working fine but when I go to use Celestry to bind to a photo or just use the built in binder through DC, It never seems to work, if I try to Sandboxie it the RAT runs but no photo along with it. Any ideas?

xVulnerable - September 22, 2014, 11:12 am

(Sep 21, 2014 11:28 PM)Numnizzle Wrote: [\[CITE\]](#) Figured I'd give this thread a shot, I'm using Darkcomet and everything seems to be working fine but when I go to use Celestry to bind to a photo or just use the built in binder through DC, It never seems to work, if I try to Sandboxie it the RAT runs but no photo along with it. Any ideas?

Sounds like the binder is not working. Buy a crypter and use it's binder.

Oliver Sykes - September 22, 2014, 2:17 pm

I think that's sandboxie. Why not just run it on your own pc? There's an uninstall function.

obystar - September 22, 2014, 2:46 pm

My friend who buy ur jsy said is not stable why. Answer.

Burnzies - September 22, 2014, 3:07 pm

Hi, I have binded my RAT to a jpg and then spoofed the extension, but it doesn't look like the file on my desktop when I distribute it through a skype window (it looks like an exe, and even has the exe extension). Why is this, and if I can, how could I fix it?

Oliver Sykes - September 22, 2014, 3:12 pm

??? Did you add a png icon? Also, if you send anything through skype, zip or rar it. It'll show the default icon and extension.

Burnzies - September 22, 2014, 3:37 pm

(Sep 22, 2014 03:12 PM)Oliver Sykes Wrote: [\[CITE\]](#) ??? Did you add a png icon? Also, if you send anything through skype, zip or rar it. It'll show the default icon and extension.

No, I did not add a png icon O-o I added a .ico file, but thanks for the zip idea :)

xVulnerable - September 24, 2014, 7:45 pm

(Sep 22, 2014 03:07 PM)Burnzies Wrote: [\[CITE\]](#) Hi, I have binded my RAT to a jpg and then spoofed the extension, but it doesn't look like the file on my desktop when I distribute it through a skype window (it looks like an exe, and even has the exe extension). zack0wns - October 7, 2014, 2:00 pm

hey was wondering if you are still offering test installs i just finish crypted my virus and want to see if it became corrupted

FearMe? - October 7, 2014, 3:40 pm

Hey man, could you give me a few test installs? Just finished making a simple IRC bot and wanna test the stability for a bit.

RAMSEY111 - October 7, 2014, 4:17 pm

This is a free RAT called njRAT: <https://hostr.co/m8v3A4GzWerB> I just got it from someone else on the site and don't know how to use it at some point I would like to move past being a script-kiddy but before that, I need to know what to do with/how to use the things I make so if some one could just tell how to use this?

botrus - October 7, 2014, 4:29 pm

I wanted to ask a few very basic questions.

Is there a program with a silent browser out there , that would load up a web page for example www.twitch.tv and watch the channel silent without sound in the background without a user knowing

Silent browsers that are built into any Rat programs that are out there now. As can you set this up to run them for X time or X times a day for X amount ect

Also, Is there a good web host and host and vps host that will take all payments in BTC and allow this type of traffic

What program would be best for this type of work? Thanks

xVulnerable - October 7, 2014, 7:46 pm

What program would be best for this type of work? Thanks

Not sure but it is possible to silently visit a page with silent browsers.

Go with an offshore host, most accept BTC. Check the hosting section.

Thekill3r - October 8, 2014, 9:33 am

Hey i'm trying to setup a RAT and I am using free dns and nvpn with darkcomet and I can infect myself but only on 127.0.0.1. The ports are open says canyouseeme and when I resolve the host address I get my vpn address. So everything seems setup correctly but I cant connect back to myself through the dns. The IP is correct and I have no firewalls running locally and I put in port

forwarding on my router just in case but no go. Any ideas?

Oliver Sykes - October 8, 2014, 9:46 am

Your router doesn't have NAT loopback enabled.

Thekill3r - October 8, 2014, 10:31 am

(Oct 8, 2014 09:46 AM)Oliver Sykes Wrote: [\[CITE\]](#) Your router doesn't have NAT loopback enabled. Thanks for the heads up, its working now.

Scaazy - October 8, 2014, 10:33 am

Can someone help me setting up everything? PM me please I'm a newbie.

Sn1perRd - October 8, 2014, 12:13 pm

how to send the rat to the victim's computer without being suspicious?

Morbid Saint - October 8, 2014, 12:31 pm

Is there anyway i can get my connections in a public place? Like if i'm going to mac donald's or somewhere where there's a free wifi available? Cause the port will be a problem i guess, and i won't be able to open a port on a network like this. Thanks. :)

Oliver Sykes - October 8, 2014, 1:39 pm

Well, you could if you got a port-forwarding enabled vpn. Damn it xVuln, I need to unsubscribe this thread.

?ikism? - October 8, 2014, 3:06 pm

If I run File manager, will it show up on the victims PC as well or is it only me that can see it?

Also, self inject (in memory) function, how does that work? Does that mean if the client program is closed the host will not dissappear from jSpy? What's the Jar URL then?

K1ngCo1e - October 8, 2014, 3:17 pm

So, what tips do you have on preventing things like chrome blocking my file and saying it's malicious or AVG saying the file is suspicious. I crypted with multiple crypters, still same issue every time. Please help, thanks!

Root one - October 8, 2014, 4:47 pm

Hello xVulnerable.

I had no experience with Rats so i decided to get NJRAT to play around and learn how does it work then i would purchase your JSPY RAT as it looks headache free about crypters and things.

So i thought i'd ask a few basic questions since i couldn't find my answers elsewhere. Would appreciate if you or anyone else who can answer these..

1: I, instead forwarding a specific port, just Nmapped my whole ports on my IP and found a open port to use. it seems no service is running on that port. and sites like canyouseeme.org also indicate it's open. so my question is if that's how it should be or i need to forward them myself. asking this because i could get no connection on that port.

2: i see some people talk about bots botskill, I dont get what's the relation between a RAT and a bots or if that's some sorta code talk i dont understand.

3: Does jspy require internet access when it's builder is building the server? Asking this to understand how it stays FUD, could be connected to your database to update itself or is it because of it's .jar feature.

That's it. Thanks

xVulnerable - October 17, 2014, 6:30 am

This help desk is still up. Feel free to post for help.

DarK_GhosT - October 27, 2014, 12:43 pm

hey xVulnerable , i ask about can i bind a pdf file with rat server and the final file still .pdf file ?

and can i bind a .rar file with rat server ?

and my 2nd quest what is the best free vpn and without keeping logs ?

and [censored] is safe vpn ? it' logs or not ..

xVulnerable - October 27, 2014, 12:53 pm

(Oct 27, 2014 12:43 PM)DarK_GhosT Wrote: [\[CITE\]](#) hey xVulnerable , i ask about can i bind a pdf file with rat server and the final file still .pdf file ?

jefti - November 5, 2014, 6:54 am

I've tried searching the forums as well as google but so far no answer to my question. Is it possible to wake-up a computer at a specified time? This way i could uninstall AV's without a change of getting caught on a victims pc. Im aware that the startup of a PC can only be arranged from the BIOS, but wakeup from sleep is a different thing. Now i could just go to control panel, but that would probably require remote accessing (which the victim will see). So im looking for some REGedit or something to get this done.

Thanks!

xVulnerable - November 6, 2014, 3:25 am

I have one dought are you the coder of njrat?

Beilinder - November 13, 2014, 7:23 am

Hello :)

I recently got a client that when you run it, it steals all the inventory of that steam account, and trades it to mine. The only thing is, I don't know how to spread. And here, I need not only to spread, but to target a very hard-to-infect group.

1. Do you have any tips? I really need it because I've tried spreading with a Youtube video and I got like 200 downloads in a week. But its not enough and its not smart because it targets noobs and people without good items.

2. If you are able to provide, even with a few victims, I'd be more than happy to even pay for that.

Thanks a lot in advance :)

The NSA - November 13, 2014, 6:55 pm

Where is a good place to start ratting android phones. I have a specific target and want to do this as fast as I can.

xVulnerable - November 14, 2014, 4:27 am

(Nov 13, 2014 07:55 PM)The NSA Wrote: [\[CITE\]](#) Where is a good place to start ratting android phones. I have a specific target and want to do this as fast as I can.

Android RATs are very limited and expensive. I really don't know any, use goole.

(Nov 13, 2014 08:23 AM)AuditoreDaFirenze Wrote: [\[CITE\]](#) Hello :)

I recently got a client that when you run it, it steals all the inventory of that steam account, and trades it to mine. The only thing is, I don't know how to spread. And here, I need not only to spread, but to target a very hard-to-infect group.

1. Do you have any tips? I really need it because I've tried spreading with a Youtube video and I got like 200 downloads in a week. But its not enough and its not smart because it targets noobs and people without good items.

2. If you are able to provide, even with a few victims, I'd be more than happy to even pay for that.

Thanks a lot in advance :)
Don't teach spreading, sorry.

P1R4T3 - November 14, 2014, 4:49 am

Hi, maybe you know any free rat that has working proxy socks support?

xVulnerable - November 14, 2014, 8:37 am

(Nov 14, 2014 05:49 AM)P1R4T3 Wrote: [\[CITE\]](#) Hi, maybe you know any free rat that has working proxy socks support?

IM, Nanocore and Legacy and Netwire I think are the only ones that have reverse proxy as far as I know.

This help desk is still alive. Feel free to post any questions.

Aziz-Ezzo - November 20, 2014, 11:21 am

What's p guys ...

I'm using darkcomet on windows 7... I did portforward on the modem and on the PC as well and disabled windows firewall and there's no anti-virus and added the port and DC into the firewall ... I have setup the FreeDNS service as well and cheked with FreeDNS Updater ... after creating the RAT and tested it on another network and another PC nothing is coming and no connections what so ever ... any idea

I wold really appreciate the help guys...

xVulnerable - November 20, 2014, 2:26 pm

Is your port open on www.canyouseeme.org?

Did you disable windows defender?

Fap_Trooper - November 22, 2014, 4:54 pm

hi, I am all for RAT's that doesnt need port forwarding, so i tried the cloud net BETA, i did everything like on the vid but when i run server it says DPI detected and cannot connctet to server error on the console. I disabled my Antivirus also and run it in Sandbox. But i still get errors as in cant connect to server etc etc...Many thanks

tmp2 - November 22, 2014, 6:01 pm

Hey xvurlnable , i would like to ask if its possible to make a fud rat using the nanocore client ?

Looking forward your reply , thanks

Yes you can use a crypter to make it FUD.

.latency - November 30, 2014, 4:39 am

What is the best way to spread your RAT?

Is there anything like a Silent Java Driveby anymore?

It would be awesome if it was just a link, and it autoexecuted itself.

Answers is highly appreciated! ;D

smsmsms81 - November 30, 2014, 5:46 am

i have some questions

if i rat through a vpn do i still need to set the "security password" in darkcomet ect.
since the vpn already encrypts your traffic?

i've looked at all the paid rat's i've seen here (specially nanocore, it looks sweet!)
but the TOS always says something along the lines of: "you must only use for educational purposes and have permission from the users you install this software on" and "do not distribute this software", "if you violate these terms your license will be terminated" this kind of makes me unsure
1. do they just say "educational purposes" and "permission from users" to not get in trouble with the law or do they really mean it? 2. "do not distribute" does that include the stub you generate? as in uploading to file sharing sites?

i get that you are responsible for your actions but if it's really for "educations purposes" then ?

also: is it secure to rat with rc4 encryption with a pass of >100 random ACSII letters and md5 for verification? ?

thanks for your help op! ?

xVulnerable - November 30, 2014, 10:40 am

Just the VPN is fine. I don't know much about encryption tbh.

I can't speak for other sellers but I would not want to sell illegal software so it should not be treated as such.

Fap_Trooper - December 3, 2014, 7:39 am

hey man, Are there any RATs that support Link servers, not like file servers like most common RaTS YOU SEE in HF?

DamienVC - December 3, 2014, 7:40 am

Vouch for this user. Most HQ RAT Setups and Installs.

sureshsuri - December 3, 2014, 9:10 am

hey i dont have router i have wired connection(isp) so can i use vpn for port forwarding if yes please tell me any free vpns so that can port forward

DARK GH0ST - December 3, 2014, 3:12 pm

Hey, JSPY is an amazing Tool! Just one question bro, how do I keep from losing people? I've had 3 people pop up on different occasions and when I close the RAT and open it again, they're gone! I put startup and stealth checked in the builder as well

Shoeman555 - December 4, 2014, 3:26 am

I can easily set up and crypt a RAT and set it up for a local network,

Besides literally walking down the hall and plugging in a USB and executing myself,

How can you virtually implant a RAT onto a computer in a LAN?

Cheers

Spartans43 - December 4, 2014, 6:08 pm

I am using freedns and I can test it on my self and connect fine but when i try and use my Vpn (143vpn) it wont connect and yes i have the correct port open, 9033 for nanocore. Do you know why this is or do you think its a vpn sided thing?

-Thanks

xVulnerable - December 5, 2014, 8:33 pm

You can use a silent java drive by if the user is using an outdated java version.

Most free hosts won't allow direct linking so you need a paid host for that, cheap ones are good too.

Fap_Trooper - December 9, 2014, 11:18 am

(Dec 9, 2014 12:15 PM)xVulnerable Wrote: [\[CITE\]](#) You can use a silent java drive by if the user is using an outdated java version.

if you upload it to a normal file sharing site try copying the download link on the download page, and use that instead, on most download sites it should download automatiacally.

otherwise it might lead to a redirect script to the actual download, try looking at the link source code and look for a link that ends in .exe or whichever file you uploaded

Was that so hard?

obystar - December 21, 2014, 8:06 am

So u need who to setup his rat but I bought jspy rat from u since 2weeks now I have setup the rat I have been begging but u don't want to set my rat for me after I pay u 55\$ now my 55\$ is a waste to me since I can not setup the rat.

I paid 55\$ for jspy and private stub u gave them to me but u don't talk any more on skype since thenis difficult to run the rat and u don't talk to me any moe on skype pls if any one can help me to setup my jspy I will be very glad thx.

CodeBinary - December 25, 2014, 12:17 pm

Are there any paid for java rats besides jspy

xVulnerable - December 29, 2014, 2:46 am

Help desk is still open guys. Post your questions here.

Henry Kissinger - December 30, 2014, 12:02 pm

Hey there I'll start by saying I'm a noob and completely self taught.

I'm having trouble with Warbot specifically redtube.exe and original.exe

I was able to install the php components but when i run the original.exe file in a bridged VM it seems to infect it but will not call home to the control panel.

I found the source online through a mediafire link I think so perhaps now I'm the one who is infected. Or maybe it was just a shitty crack? idk but please help :)

For the sake of being brief; do you maybe have a solid link to warbot source that is cracked properly?

Thank you in advance

xVulnerable - December 30, 2014, 2:39 pm

what rats offer this or could i add a plugin to use multiple dns/ip?

TA044492 - January 9, 2015, 4:36 pm

I'm just a middle schooler but interested in using this (for educational purposes). I can't afford it as my parents will not give me any. I figured we could work something out. Thanks.

prokwen2 - January 9, 2015, 6:28 pm

What free-for-use do you reccomend on ?

and where can I get it.

Thanks in advance.

Lyfoon. - January 9, 2015, 9:42 pm

I crypted my NANOCORE RAT and it was FUD but when ever I asked my friends to test install, windows defender blocked the file. Why so?

is there any way to combat this? also is it possible to infect with just plugging in a usb? Thanks.

3xtr3m3 - January 10, 2015, 5:27 am

I apologies if you have already answered this question, but there are too many pages!

I THINK my rat is successfully set up, but how do I know it works?

I intend to have fun with a friend of mine, but want to make sure it works correctly before sending it

xVulnerable - January 10, 2015, 5:56 am

(Jan 7, 2015 11:39 AM)kolec94 Wrote: [\[CITE\]](#) what rats offer this or could i add a plugin to use multiple dns/ip?

I don't know by hearth but pretty sure Darkcomet has the option.

You can add plugins yes.

(Jan 6, 2015 09:29 PM)canibeanon Wrote: [\[CITE\]](#) Want to run me through dark comet again?

appreciate the response in advance, ty op

Wut?

(Jan 6, 2015 07:08 PM)Dr. King Schultz Wrote: [\[CITE\]](#) Will the webcam LED be enabled if I listen through the laptops microphone? It says Realtek, its a built in mic, probably for the webcam.

I have NanoCore & IM3

Microphones do not enable webcam LEDs, because well....they're not webcams.

(Jan 9, 2015 05:36 PM)TA044492 Wrote: [\[CITE\]](#) I'm just a middle schooler but interested in using this (for educational purposes). I can't afford it as my parents will not give me any. I figured we could work something out. Thanks.

You can use a free RAT and learn how to setup your own, it's not that difficult. However you still need a paid crypter which will cost you approx \$25/month.

(Jan 9, 2015 07:28 PM)prokwen2 Wrote: [\[CITE\]](#) What free-for-use do you reccomend on ? and where can I get it.

Thanks in advance.

njRAT.

(Jan 9, 2015 10:42 PM)Lyfoon. Wrote: [\[CITE\]](#) I crypted my NANOCORE RAT and it was FUD but when ever I asked my friends to test install, windows defender blocked the file. Why so?

is there any way to combat this? also is it possible to infect with just plugging in a usb? Thanks.

It is very difficult for a crypter to actually bypass ALL AVs. Even if it is scantime FUD it may still not be runtime FUD. You cannot combat it, you just have to deal with it and find a better crypter.

Autorun USB has been patched on Vista +.

(Jan 10, 2015 06:27 AM)3xtr3m3 Wrote: [\[CITE\]](#) I apologies if you have already answered this question, but there are too many pages!

I THINK my rat is successfully set up, but how do I know it works?

I intend to have fun with a friend of mine, but want to make sure it works correctly before sending it

Run it on your own PC to test it. If it works, it works fine as long as you did not use 127.0.0.1 as a DNS/IP.

Testing on VM is always better, remember to crypt it.

ButtMonkeyYT - January 16, 2015, 4:42 am

Hi, I don't have any money currently :c
Can I have this, please?
Thanks in advance :))

obystar - January 16, 2015, 6:41 am

Since I bought your jspy I haven't use bcas I don't know how to setup and u don't setup for me and remember I pay 55 for jspy and long time fud I don't recommend any one to buy jspy bcas u don't keep attention to customer if bought.

Fastie - January 17, 2015, 2:15 am

Hello!

It appears to be my ports which I am having trouble with, as I try scan them using the Net Helper (on NanoCore) it says the port is closed, and when I look it up on canyouseeme.org I get an error 'Connection timed out'. I have tried manually opening my ports, but they do not seem to open correctly, I had NanoCore working with a DMZ feature in my router, but since I restarted my computer this has no longer been working. Do you have any solutions you could give me about fixing the 'Connection timed out' error?

Thank you in advance!

Bammeh - January 20, 2015, 9:00 pm

My question: Are there any current and updated Java Drive Bys?

How do I work the Port Forward feature on 143 VPN? Thanks!

Oliver Sykes - February 20, 2015, 8:27 pm

(Feb 20, 2015 09:24 PM)Brady1225 Wrote: [\[CITE\]](#) How do I work the Port Forward feature on 143 VPN? Thanks!

I believe you fill out the Port options at the bottom, validate, connect, and put the port in the tcp listener that comes with it.

xVulnerable - February 21, 2015, 3:44 am

(Feb 20, 2015 09:24 PM)Brady1225 Wrote: [\[CITE\]](#) How do I work the Port Forward feature on 143 VPN? Thanks!

Open 143vpn client and go to the portforwarding tab.

earltop234 - February 24, 2015, 3:51 am

im currently using cloud net beta, i compiled a stub and send it to my friend he downloaded it and execute it but when i start my cloud net, no clients are connected. btw the port and ip that i compiled

is 127.0.0.1 and the port is 9999 sorry for being noob :)

xVulnerable - February 24, 2015, 4:30 am

(Feb 24, 2015 04:51 AM)earltop234 Wrote: [\[CITE\]](#) im currently using cloud net beta, i compiled a stub and send it to my friend he downloaded it and execute it but when i start my cloud net, no clients are connected. btw the port and ip that i compiled is 127.0.0.1 and the port is 9999 sorry for being noob :)

You need a DNS instead of 127.0.0.1. Follow a tutorial.

Leonzola - February 24, 2015, 4:35 am

I got a particular slave that keeps appearing on new machines, the IP is from Russia so i'm having a very hard time connecting to them. When I got in it looked like a fresh windows vista/xp machine. Is this a honeypot or is my file being analyzed?

How to monetize nanocore?

I don't want to mine anything else i'm fine with

HauntedPast - March 29, 2015, 12:09 am

What paid rat from HF would you recommend? I am mainly looking to account steal.

Steam is the main one

xVulnerable - March 29, 2015, 9:12 am

(Mar 28, 2015 02:57 PM)reavalized Wrote: [\[CITE\]](#) Ratting is considered as hacking? or is more like skiddy stuff?

Hacking: "Gain unauthorized access to data in a system or computer."

eg: "They hacked into the bank's computer"

With RATs you can do that, so it is hacking. However it requires no skill to do via RATs so it's a skid way to hack.

(Mar 28, 2015 04:50 PM)Manuel Neuer Wrote: [\[CITE\]](#) atm I am using NanoCore, and the port I am using is open, my firewall is off (inbound rule set to accept all connections for both private and public), and im only getting failed connections. Any help?

Hey..

I am a total noob to RAting. I need a complete tut on setting up a rat. I couldn't find a tut on HF. If you could help me or provide me the link to the tut.

Thanks

MaddHaxxor479 - April 9, 2015, 6:49 pm

Hi, for some reason, whenever i build a stub, (this applies for any RAT tools), and then crypt it, it doesnt work. Everything seems to work, it notifies me with the popup i made (via RazorCrypt v2.0), but it doesnt show on the master list. I then tried executing the original file (non-crypted), and it immediately works and adds my computer to the master list. I tried sending the non crypted stub to my friend (with his knowledge), and works instantly. But then again, when i crypt it, it no longer does it's job. I have followed countless youtube tutorials, even ones by the OWNER of the crypt, but still no go. I have run everything as an admin, disabled firewall completely, disabled AV completely, but no go. Im using no-ip, the DUC client to verify, and the current RATs i tried are Nanocore, DarkComet, and njRat. Any help would be much appreciated.

P.S. I also am NOT getting any errors what-so-ever on execution, so its not just a silly mistake.

tweezers - April 9, 2015, 9:25 pm

Hey guys when setting up duckdns it asks for a domain name what do I put in there?

Thanks.

Seadoke12 - April 10, 2015, 2:26 pm

I Keep getting this error that says

"windows cannot access the specified device, path, or file. you may not have the appropriate permissions to access this item."

I ran it as administrator tried everything please help!!!

opp - April 10, 2015, 5:51 pm

Hey! I was wondering if I can get a test install so I can make sure my stub works. Thanks!

This is a support thread, not a free setup thread. Post here if you have trouble setting it up.

xxMafia101 - July 6, 2015, 6:30 pm

The machine I want to infect is running Windows 7. If I have a decent crypter, the RAT should surpass all AVs, firewalls Windows Defender, Windows SmartScreen etc correct? I'm a bit concerned that one of those programs will throw a red flag and the potential party won't download it.

Also, I was thinking about sending it via Email as an "add-on" for a webapp. Does this sound like a good idea? If not, I'm definitely open to suggestions. Thanks!

xVulnerable - July 7, 2015, 12:35 am

(Jul 6, 2015 06:30 PM)xxMafia101 Wrote: [\[CITE\]](#) The machine I want to infect is running Windows 7.

If I have a decent crypter, the RAT should surpass all AVs, firewalls Windows Defender, Windows SmartScreen etc correct? I'm a bit concerned that one of those programs will throw a red flag and the potential party won't download it.

Also, I was thinking about sending it via Email as an "add-on" for a webapp. Does this sound like a good idea? If not, I'm definitely open to suggestions. Thanks!

You can scan your file on www.nodistribute.com to see it's detection rate.

eeeehm.

I highly not recommend that site because last time I scanned my crypted stub on there it said all green I tried the next day (it is my own crypter, only site I scanned it on) it was full of nice beautiful red "MSIL" - no I didn't spread it yet.

Sorry but that theory proves nothing. Your stub could have got detected by many ways.

Incendiary. - July 7, 2015, 3:34 am

<http://www.nodistribute.com> is a valid option. Although i have had several people tell me they distrobutte. I can not confirm this though.

www.refud.me/scan.php is what i personally use. Its very quick and easy to use. Made by the same people as Cryptex i believe?

::Thunder:: - July 9, 2015, 4:49 am

Thanks for answering our questions OP.

Do you know if there is any RAT that can inject javascript into the html stream?

Best with an admin panel that allows you to manage your stats and system where you can choose what to inject?

xVulnerable - July 9, 2015, 5:13 am

Hello i am wondering for port forwarding with a vpn how do i find my internal ip to open a port.

Alison Wonderland - August 19, 2015, 6:56 pm

(Aug 19, 2015 06:51 PM)JohnHolesten Wrote: [\[CITE\]](#) Hello i am wondering for port forwarding with a vpn how do i find my internal ip to open a port.

IP config in CMD

this will return a couple internal IP

Generally look for "10.x.x.x" rather than "192.168.x.x"

choikom Matth - August 22, 2015, 8:12 pm

Hey i am currently trying to make Quasar work and i was wondering if no-ip is still viable as a dns option. I also would like to test my rat but when i had my built stub finished and i ran it sandboxed on my computer nothing came up could you help me?

xVulnerable - August 23, 2015, 2:47 am

Don't use noip anymore. Make sure your ports are open on www.canyouseeme.org

choikom Matth - August 23, 2015, 9:59 am

What should i use instead of no-ip then? And what is the problem with using it now?

xVulnerable - August 25, 2015, 6:25 am

Nerdyloser - September 2, 2015, 3:45 pm

Hello there,

I noticed this thread and saw how helpful you were.

Would it be possible for you to help me look into Silent Java Driveby creation?

I'm not interested in just blatantly copying stuff etc, I seriously would like to learn.

In the meantime I'll already have a look at it again. :)

~Nerdy~

Cosmetic - September 4, 2015, 4:15 pm

Hi im really wanting to get into ratting but i dont know where to begin any tips? also will i need a encrypter too?

xVulnerable - September 5, 2015, 1:30 am

(Sep 4, 2015 04:15 PM)Jaron Wrote: [\[CITE\]](#) Hi im really wanting to get into ratting but i dont know where to begin any tips? also will i need a encrypter too?

You can start by reading RAT setup tutorials. You need a PAID crypter.

blubo - October 4, 2015, 1:10 pm

I hope you still help people. So I went back ratting again I had first 100+ slaves but now when I spread my rat the victim runs it but I don't see him in my darkcomet list. If I try it on myself it works like a charm. I am using razorcrypt btw

I hope you can help me.

soulreaverz - October 4, 2015, 1:25 pm

how can i bind a RAT in to a picture to make it the most legit possible?

sasibasasi - October 4, 2015, 2:14 pm

My port is open

My NO-IP is working fine

When i try to start Server.exe by myself , i cant see my PC in the njrat users , ive seen it before

but when i run it in another PC i can see his PC , but when i try to remote desktop or task proccess etc

then its crashing him and i can see him disconnecting and never comes back ..

what can i do to fix this ?

First off, you should use noip unless you want the party van to come to your house. Try this, [fishDNS](#).

Second, I'm not really sure that exactly is going on; it sounds like a really corrupted/unstable stub OR the other persons AV is removing it.

I haven't had too much experience with njrat myself so maybe someone else will have a better explanation.

xVulnerable - October 5, 2015, 12:05 am

Seems like a bug, or very poor connectivity issues. Which RAT is it?

(Oct 4, 2015 01:10 PM)blubo Wrote: [\[CITE\]](#) I hope you still help people. So I went back ratting again I had first 100+ slaves but now when I spread my rat the victim runs it but I don't see him in my darkcomet list. If I try it on myself it works like a charm. I am using razorcrypt btw

Last time I checked Razorcrypter was not FUD. Check that out.

(Oct 4, 2015 01:25 PM)soulreaverz Wrote: [\[CITE\]](#) how can i bind a RAT in to a picture to make it the most legit possible?

With the use of "binding tools" however this will not change extensions.

Rewinds_ - October 5, 2015, 12:12 am

I'm kinda noobish so far, I bought IM3 a while back, I was wondering what I could use to hide my ip from the "Test subject" I'm aware you can check your established connections, I've also used no-ip but I had my friend resolve it and sure enough it should my ip, If you have any suggestions could you please PM me or reply to this post please and thank you. ~Rewinds

DNS does nothing to hide your IP, use a VPN with open ports.

Are there any items on the marketplace currently that allow extension spoofing to actually spoof the extension to for example a .txt to a .img or vice versa

shorty420 - October 5, 2015, 3:14 am

I'm looking for an best Windows RAT that doesn't have any .net 2.0 dependencies and Best RAT for mac also

CA n you can provide me the suitable crypter name also corresponding to the RAT

sloth011 - October 5, 2015, 5:55 am

Hey,
How do I build a TCP Server for my RAT to listen to it, to be precise, receiving connections from clients over it.
Also, if it is possible, could I get a short introduction of the whole setup and how this thingy with no-ip or whatever works?
Thank you for your help in advance!

Regards,
sloth Black Hat

Most RATs are in .net nowadays, there aren't many native RATs. Netwire or any Java RAT works with mac. I don't vouch for any crypters.
