Thread: [Javascript help :c](#)

Hotmailkukac - May 25, 2010, 3:50 am

Ye, I know I have a lots of problems, but when I finish my site, I will stop asking questions ?

So help me please with this javascript. So, I found this javascript, which is I think very useful, but I have 1 problem with that:

It's scrolling to the section what you href, but it is scrolling the whole page.

Well, I need to use this script to scroll to the data In layer(which is has a scrollbar, thats why I need it :))

So, is it possible to change the javascript somehow to make it work?

If yes, help me please :) ?

Here is the script

PHP Code

```
<?php
var bookmarkscroll={
    setting: {duration:1000, yoffset:0},
    //{duration_of_scroll_milliseconds, offset_from_target_element_to_rest}
    topkeyword: '#top',
    //keyword used in your anchors and scrollTo() to cause script to scroll page to very top

    scrollTo:function(dest, options, hash){
        var $=jQuery, options=options || {}
        var $dest=(typeof dest=="string" && dest.length>0)? (dest==this.topkeyword? 0 : $('#+dest')) : (
dest)? $(dest) : [] //get element based on id, topkeyword, or dom ref
        if ($dest==0 || $dest.length==1 && (!options.autorun || options.autorun && Math.abs($dest.
offset().top+(options.yoffset||this.setting.yoffset)-$(window).scrollTop())>5)){
            this.$body.animate({scrollTop: ($dest==0)? 0 : $dest.offset().top+(options.yoffset||this.
setting.yoffset)}, (options.duration||this.setting.duration), function(){
                if ($dest!=0 && hash)
                    location.hash=hash
            })
        }
    },

    urlparamselect:function(){
        var param=window.location.search.match(/scrollto=[\w\-\_]+/i) //search for scrollTo=divid
        return (param)? param[0].split('=')[1] : null
    },

    init:function(){
        jQuery(document).ready(function($){
            var mainobj=bookmarkscroll
            mainobj.$body=(window.opera)? (document.compatMode=="CSS1Compat"? $('html') : $('
body')) : $('html,body')
            var urlselectid=mainobj.urlparamselect() //get div of page.htm?scrollto=divid
```

```

        if (urlselectid) //if id defined
            setTimeout(function(){mainobj.scrollTo(document.getElementById(urlselectid) || $('a[name='+urlselectid+']:eq(0)').get(0), {autorun:true}}), 100)
        $('a[href^="#"]').each(function() { //loop through links with "#" prefix
            var hashvalue=this.getAttribute('href').match(/
#\\w+$/i) //filter links at least 1 character following "#" prefix
            hashvalue=(hashvalue)? hashvalue[0].substring(1) : null //strip "#" from hashvalue
            if (this.hash.length>1){ //if hash value is more than just "#"
                var $bookmark=$(a[name='+this.hash.substr(1)+']:eq(0)')
                if ($bookmark.length==1 || this.hash==mainobj.topkeyword){
//if HTML anchor with given ID exists or href==topkeyword
                    if ($bookmark.length==1 && !document.all) //non IE, or IE7+
                        $bookmark.html('.').css({position:'absolute', fontSize:1, visibility:'hidden'})
                    $(this).click(function(e){
                        mainobj.scrollTo((this.hash==mainobj.topkeyword)? mainobj.topkeyword :
$bookmark.get(0), {}, this.hash)
                        e.preventDefault()
                    })
                }
            }
        })
    })
}
}
}
}
}

```

bookmarkscroll.init()

If you can help, please help, I really need it ?

Thanks,
Hotmaillkukac ?

            }
        })
    })
}

```

bookmarkscroll.init()

If you can help, please help, I really need it ?

Thanks,
Hotmailkukac ?

I think you are asking for some script ,which will scroll to a specific location in page ,when we click on some anchor tag.

If thats what you want you can use

Code scrollWhen someone clicks this "scroll" then he/she will be taken to the location of page where this div is

Code <div id="middle">hi</div>

Xon - May 25, 2010, 8:32 pm

Do you want the scroll automated?

Hotmailkukac - May 26, 2010, 1:21 am

If thats what you want you can use

Code scrollWhen someone clicks this "scroll" then he/she will be taken to the location of page where this div is

Code <div id="middle">hi</div>The whole script is about that :D

But I don't need to scroll in the whole page, I need that scrip to scroll in the Layer, what has fixed height, but the data in that is much longer, so there is a scrollbar.

So I want to scrollll in that layer :P

Just play around with this you will get what you want.

```
Code <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
<html xmlns="http://www.w3.org/1999/xhtml">
<head>
<meta http-equiv="Content-Type" content="text/html; charset=iso-8859-1" />
<title>Untitled Document</title>
```

```
<style type="text/css">
[b]<!--[b]
#Layer1 {
    position:absolute;
```

```

width:337px;
height:108px;
z-index:1;
left: 255px;
top: 750px;
overflow:scroll;
}
-->
</style>
</head>

<body>
<div id="middle"></div>
<a href="#last">click here</a>
<br /><br />
<div id="Layer1">
<br /><br />
<a href="#last">click here</a>
<br /><br />

```

If yes, help me please :) Blush

Hey guy's. First of all I'm posting this because hackforums sometimes has good advice on things to buy. So here it is.

I'm getting a summer job of course in the summer, it's a full time job as a landscaper I get like \$11 or \$12 per hour (cheap but I'm only 15 + first job).

I'm turning 16 in the summer as well so yeah.

But the thing's I have in mind when I get this money is

- * Laptop
- * New Computer Desk
- * New Computer Chair
- * T.v wallmount :) (40 inch)
- * Xbox 360 (Last one got banned)
- * 1-2 Computer monitors.

I recently bought a gaming computer, so I'm only spending \$700-\$800 on a laptop. I'm also considering to buy a really nice home theatre system with really nice base, but thats a maybe still.

Is there anything else that's nice these day's that is a must buy?

I'm not going to be converting to paypal for hackforum's but the money I have on my paypal might go towards leet/ubers & rich bitch award.

<div id="top">

Anything cool, doesn't matter price that is cool to have?

Suggest anything , any price and if a link is possible that would be great , hopefully I get good feedback on this.

Make a div that you put all the data in and make it auto scroll and then only call that function for that certain div
