Thread: [Configuration Issues \[Paid Help\]](#)

Tirant - August 18, 2014, 8:06 am

Okay. Basically, I need someone help me find where I made the mistake that is causing an issue with one of my pages on my website.

The website is in PHP

And I need help locating a page to edit, simple shit.

If you think you can do it Ill give you 10\$, I believe its a simple fix, I just don't know where I went wrong.

Damdomy - August 18, 2014, 8:07 am

What's the error? PHP should spit it out. Enable all error reporting. How many pages is the project?

I really only NEED to get 1 thing fixed (a single page), i just would appreciate it if you could help me locate something I need to edit is all.

Code Fatal error: Call to a member function prepare() on a non-object in C:\xampp\htdocs\engine\server_modules\trinity\realm.stats.php on line 150
thats the error I am getting. It has to do with the configuration in one of the other folders thats not allowing it to call onto said function.

Is it a class? Are you passing pdo/mysqli to it?

Tirant - August 18, 2014, 2:42 pm

Bump, I need to get this done.

Single page job, if u know what ur doing it should be very easy.

Bump

still need to get this done, could possibly pay more for a couple more things if you are interested.

SlightlyNuclear - August 19, 2014, 9:59 am

You're calling prepare() on a non-object - isn't that obvious? Whatever you're calling prepare() on isn't an object capable of using that function.

I got it fixed though

- Thanks everyone.

It's not a configuration error at all - you wouldn't get a non-object error for that.

It was though, cuz it was found and I fixed it and it worked so...

Its calling on an object which needed to be configured, from my understanding and since I had something wrong in there, it didnt work.

In future, improve your post details for a faster response. Aim to add all errors, what you're using and your "configuration" information. It'd also help to post it in the correct section.
