Thread: [Is there a way to check to see if I product I purchased has a backdoor?](#)

**R?R** - August 18, 2014, 3:00 pm

Basically the title sums it up, as of lately my computer has been rather sluggish and acting out of the ordinary, I'm not sure if this just strain from streaming 10 hours a day 14 days straight... or my recent transition from windows 8 to windows 8.1.. but I purchased a few products from some members here on HF and was wondering if it would be possible to check if they are backdoored?.. sorry if this a dumb question.. but any help would be nice! Thanks in advance!

You could analyze these products yourself, but I think that asking someone else to analyze them for you (which would mean to "share" the products) would go against any sellers ToS here and ends up in a scam report being open on you.

How would I go about "Analyzing" the products myself? what kind of software/tools would I need?.. as you know im not the most tech savy person. ;o

I think that -Hyperion actually posted a thread with tools you should use when doing malware analysis. Wait ...
