Thread: [help me to center center it](#)

yasje - August 18, 2014, 3:07 pm

hello,

i am trying to put some text links to center it

where the red lines are i want it there, i hope you guys can help me

[Screenshot example](#)

Griev?us - August 18, 2014, 3:08 pm

May want to fix your title, it says center twice.

Also the image isn't loading for me.

yasje - August 18, 2014, 3:08 pm

screenshot now working and the title is right :P

theAbsolute - August 18, 2014, 3:19 pm

```
.yourclass {  
    text-align:center;  
}
```

yasje - August 18, 2014, 3:27 pm

    text-align:center;  
}
```

Thanks but now they moved to the right but i want to center in the middle...

i want this:P

[Center](#)

[Center](#)

You could use

Code margin-top: 50px;
Change 50px to whatever you want.

yasje - August 19, 2014, 2:12 am

(Aug 18, 2014 04:11 PM)KRMZ. Wrote: [\[CITE\]](#) You could use

Code margin-top: 50px;

Change 50px to whatever you want.

Thanks for your answer, but it destroys the layout but thanks for the thinkin ?

PS: i got the answer!

Just use enter code in the html section where the navigaiton text is:

And it will go to the place where you want it.

Thanks all for the help!

Yours sincerely.

~this can close

simbe1 - August 19, 2014, 5:53 am

just enter

<center></center>.....

earthoX - August 19, 2014, 5:58 am

Code margin-top: 50px;

Change 50px to whatever you want.lmao

Use margin: 0px auto; to center with CSS.

yasje - August 19, 2014, 6:16 am

are you serious -.- its about texts not about images...

(Aug 19, 2014 05:58 AM)earthoX Wrote: [\[CITE\]](#) lmao

Use margin: 0px auto; to center with CSS.

that is a center that only center in the line them self, i center it middle of the middle.

not middle of a line.

SlightlyNuclear - August 19, 2014, 9:55 am

I assume you're looking for vertical alignment which isn't as simple as you'd think.

Here's some help for you: css-tricks.com/centering-in-the-unknown/

SlightlyNuclear - August 19, 2014, 5:02 pm

(Aug 19, 2014 04:58 PM)I Am Groot Wrote: [\[CITE\]](#) Vertical alignment is actually pretty easy using absolute positioning, if you're using a fixed width and height.

View the [fiddle](#) I made

Ironically your fiddle shows content that isnt vertically aligned.

SlightlyNuclear - August 20, 2014, 2:37 am

(Aug 19, 2014 05:05 PM)I Am Groot Wrote: [\[CITE\]](#) It's an example. The UL, given a fixed height and width, is centered.

Also - Why did you down rep me? I smell a bit of rep abuse. I was trying to help a fellow member, and I get negative reinforcement? Thanks a lot. No wonder why other forums are getting more popular now.

Provided a false example and duplicated anothers post without consulting the OP. It was justified.

yasje - August 20, 2014, 6:24 am

Guys thanks both of you for the new tricks, i didnt know some of this methods!

Thank you very much! ?

SlightlyNuclear - August 20, 2014, 8:48 am

(Aug 20, 2014 08:40 AM)I Am Groot Wrote: [\[CITE\]](#) That's not a false example. I guess I need to color code it for you. <http://jsfiddle.net/5y9m85zc/2/>. The ul, is clearly centered.

I was basing it off of the content rather than the block itself. It'd be a good idea to resize the block or to centralise the content within the block.

SlightlyNuclear - August 20, 2014, 8:54 am

(Aug 20, 2014 08:51 AM)I Am Groot Wrote: [\[CITE\]](#) You don't learn by getting spoon fed code. You show an example, and let them connect the rest.

I don't quite agree with that. It'd be much more beneficial if the OP could reverse engineer the solution in my experience.

Didn't bother reading any replies, but if your original post is what you wanted, all you need to do is use this:

<http://zerosixthree.se/vertical-align-anything-with-just-3-lines-of-css/>

Not a bad solution and it works for me when I'm doing personal, portfolio sites. Commerce & professional sites require a lot more code which I'm guessing you probably don't want to take the time to look into.

Why would you use transform for something like this..? That is so defeating the object.

vixnor - August 21, 2014, 11:59 am

hello,

hit this

Might not be industry standards, and honestly, if you're not coding for a company that's paying you more than 2 grand, you can use whatever shitty code you like to get the job done faster (as long as it stays functional and secure).

That's how I see it anyways.

Oh boy, your ideology isn't too bad but I still don't agree with it.

Good code is beautiful code ^_^

No, fuck off you little retard. Learn to read the OP.

brewery - August 21, 2014, 1:59 pm

Another way I like to use often is to simply use the CSS3 "calc" feature:

```
Code .element{
  margin-top:calc(50% - 20px); /*if element is exactly 40px high*/
}
```

This can be done with absolutely/relatively positioned objects too with the "top" property instead of "margin-top".

Hope this helps :)
