Thread: [Doxing Tutorial](#)

bungie165 - August 20, 2014, 7:23 pm

I did not create this tutorial but found it, all credits go to the creator of this tutorial. Just thought I should share this with the community, enjoy!

First of all, let us start at the very beginning. 'Dox' is short for 'docs', which as you probably know is short for documents. You want to find the information (documents) on somebody and that's how the name is made. To start off, we will need a small 'guide' to keep our findings together. If you have read a guide on how to dox before or have tried it in the past, you will have already used something similar.

Quote:

Username:

E-mail:

Full Name:

City:

Zip/Postal:

State/Province:

Country:

IP address:

ISP:

Home Address:

Phone Numbers:

Social Networks:

Other:

Username/Screen Names

If you know of this user online, then they probably have some sort of username from where you found them. This is probably the main step as getting other information may be difficult without knowing things like email addresses and real life information, which, you probably may not know if you are trying to dox them.

Email:

There are lots of different ways for you to get hold of your slaves email address. If the user owns a Facebook account, their email address may be inside the 'info' section of their account. Another popular method is using the slaves screen name in a quick Google search. Not only would this return many other accounts online, but also possible email addresses containing the screen name. There are plenty of other examples, but the email address can lead you to some main information.

Address:

If you know the name of your slave then you can find other information such as their address. You can use some of the sites which I have listed at the end of this small guide. Using these websites you can also find out their phone numbers that are registered with the address. Another method you can use is using the Facebook/Twitter location feature. If their location is posted every post, you can trace back to their home and add more juicy information to your dox.

A popular choice when doxing involves IP addresses. Using a site like <http://www.ipaddress.com> can get you far. There are hundreds of ways to get a users IP which I will go into in a different tutorial. Once you have the IP, you can reverse it to their home and get information about their ISP

and more too.

Social Networking:

Another extremely popular method is using Social Network Sites to your advantage. One persons life can rest within a single page so this can sometimes be your biggest tool. Let's take Facebook for an example. If you have the slaves email address, you can enter it into the search bar and it will link back to a user registered with it. You can also search for their name with a location you could have traced back from other social networking sites such as Bebo and Myspace.

Images:

Let's say that you have found some images on some social networking sites and you have added them to your dox, now what? You can find even more information by using something as easy to use as TinEye to reverse the image and find it on other sites. This can also help you find out if the user is real or fake. Google also provides a good image search, just drag the image in and let it do it's job.

You may not always need an image of the actual user, you could also use their avatar and link it back to even more accounts.

Useful Searching Sites

Misc. Search Sites:

No offense, but this was copied off of somewhere. I smell it.

Edit: lol didn't read the first line. Next time give credit OP. Still a good thread.

I'm happy for you that you made a tutorial for other users, but there are many tutorials VERY similar to this.

PatientZero - August 20, 2014, 8:51 pm

Thnx for sharing this,

Gonna have some fun with my friends xD
