Thread: [\[TUT\] Crypter not FUD? | Find a FUD Icon! \[TUT\]](#)

Khamul - August 21, 2014, 11:06 am

Ok, so there have been so many people on both Crypter sales and other threads complaining about detections and not being able to get their file FUD even if the Crypter advertizes that it is FUD. This is either due to non-legit assembly info or a Low Quality or detected Icon.

What kind of Anti Virus detections do we class as generic? Well look out for these detections (some are shown below): Generic, Strictor, Luhe.Fiha, Zusy, Barrys, Kazy (sometimes) and a smattering of others.

So here goes! How to get a FUD icon:

The most common way to get icons is by going to iconarchive.com or some other icon download site. So how do we get a FUD icon? Use a method that not many people use of course! Ok so first off here is a scan of a Crypted file with a detected icon:

[img]<http://scan.majyx.net/image.php?id=127041>[/img]

6/35 !! Lets all go and flame the sales thread! NO. ?

1) Go search for an icon that is NOT in .ico format (Use google images) e.g. "Spotify Icon" <-- Can be .jpg, .png or whatever!

EDIT: Try to get an HQ icon (e.g. at least 250x250px or larger!)

2) This should do:

3) Right click and hit "save image as..."

4) Call it whatever you want

5) Go to this site: image.online-convert.com/convert-to-ico

6) Click "Choose File" and then open your png icon:

7) Now click "Convert File"

The newly created .ico file will be downloaded and then you can use THIS icon with your crypter!!!

Scan after new icon added:

Please leave thanks if this helped!

Ub3R_FAYG - August 21, 2014, 11:24 am

This will help a lot of new people using like the darkcomet icon pack thing :P

CorsoConnected - August 21, 2014, 11:39 am

Nice tutorial, never thought about Icons themselves being flagged but it would only make sense. Will have to try this once I am all setup.

youdealinwitavillain - August 21, 2014, 12:25 pm

thanks. never knew about this before. nice turtorial

Moon Rock - August 21, 2014, 9:41 pm

I knew about icons being detected, but never though it would go off of a icon only.

xVulnerable - August 21, 2014, 10:03 pm

"FUD Icon"....You just made that up lol

It's called a high quality icon, which would bypass some minor temporary detentions.

Good tutorial though.

Khamul - August 22, 2014, 1:31 am

Thanks so much for the feedback guys and the thread rating :) Just updated the image so its easier to navigate the thread! will upload an example detected icon for testing! Lets keep this thread alive lol :)

Cyber Coder - August 22, 2014, 2:21 am

ill definitely send some newbies here, I got complains almost every days for not being fud because of icon/assembly, yet I explain in my tutorial about this, thanks for the thread !

DaPiranha - August 22, 2014, 4:53 am

it sounds stupid but yes changing the icon removes alot of detections. Make sure that you choose a HQ icon to get the best result.

Yeah that's an important note, try to get one that is at least 256x256px !!

C'mon guys!! Any more feedback?:

I literally have no idea what you just said, apart from 'it won't work'....It will only work for GENERIC detections...

ltestze - *October 3, 2014, 9:10 am*

Hello,

Great job but they're FUD ST and RT ?

????? ????? - *November 24, 2014, 10:27 am*

i have learnt something on this thread and keep-up the work .

Vghworld - *November 24, 2014, 1:37 pm*

I am on my knees crypting to find a FUD Icon :(

Arrandale - *November 25, 2014, 12:05 am*

Good thing that you post here! Thanks!

--Still learning bro!

Pi_Rat - *November 25, 2014, 12:31 am*

Grate tut my friend and very helpful..Keep up the good job

tekniko - *January 16, 2015, 12:52 am*

Thank you for this. I have never considered the icon to be of any importance.

Krynin - *January 23, 2015, 10:23 am*

Many thanks for this info

BTW why av-s detect icons?

nibble - *July 3, 2017, 12:59 pm*

Many thanks for this info
