Thread: [Watching Anime in 60/120 FPS \(if you have the screen and PC for it\)!](#)

In?sane? - August 21, 2014, 5:43 pm

So i just randomly stumbled across this project called SmoothVideo which allows you to watch anime or whatever you want in 60 FPS. It is pretty heavy on the PC so make sure you have a decent one before trying it out.

Just finished watching my first anime with this, it's super smooth and action scenes looks absolutely beast in 60 FPS although some normal scenes looked kind of weird (might be because i'm not used to it).

Personally i'm running this on MPC-HC with MadVR and xy-VSFilter.

Website: <http://www.svp-team.com/>

Tutorial: https://www.youtube.com/watch?v=NeY_6jvYvWo

If your having problems: http://www.svp-team.com/wiki/Watching_anime

Obviously this is not for everyone but your opinion is important nonetheless, so discuss!

Taibhse - August 21, 2014, 6:00 pm

shame I only have a laptop :P book marked for future interest but I know a mate who would only love to push a laptop into trying this, thanks op

No problems, also be sure to share your thoughts if you end up trying it.

Nevieth - August 21, 2014, 6:08 pm

I may give this a shot later on, thanks for this Insane.

What media player do you use? I know for sure that both MPC-HC and Potplayer works.

If you decide to install MPC-HC be sure to get the 32 bit version.

Vip?r - August 21, 2014, 6:25 pm

My default is either VLC or WinMediaPlayer.

Jay? - August 21, 2014, 6:28 pm

This alongside KCP is pretty nice. ?

In?sane? - August 21, 2014, 6:29 pm

(Aug 21, 2014 06:25 PM)ViperCoder Wrote: [\[CITE\]](#) My default is either VLC or WinMediaPlayer. They are probably not supported then, sadly.

Somehow i've never stumbled across that codec pack, going to check it out when i wake up.

Steve Kosh - August 21, 2014, 6:46 pm

I'll give it a try once I finish the newest episode of ZnT and give my thoughts.

SavageBoys - August 21, 2014, 8:05 pm

Ah intermediate frames, the thing is some scene changes and movements which are meant to be sudden will become sluggish and predictable.

Basically what it does is takes the previous frame and fades it into the next.

On a 120/144Hz monitor it will be extrapolating a shit ton of frames, enjoy your blur fest.

Also VSync.

In?sane? - August 22, 2014, 3:00 am

Yeah some scenes looked really weird, going to test 48 fps and see if it looks better after breakfast.

Eternal. - August 22, 2014, 6:08 am

Will be trying this out, thank you for sharing.

Wayside - August 22, 2014, 6:19 am

Does this affect your internet? Since it's better quality

No problems, have fun!

(Aug 22, 2014 06:19 AM)Wayside Wrote: [\[CITE\]](#) Does this affect your internet? Since it's better quality

This is for downloaded files and not website streaming so it only affects your PC performance.

stupid liar - August 22, 2014, 6:07 pm

I just tried it and it's amazing, thanks for sharing it buddy.

Madam X - August 22, 2014, 6:21 pm

This looks pretty cool. Not sure if my computer would be able to handle though. I'll try it though in a little bit.

Thanks.

Programmargorp - August 22, 2014, 7:04 pm

I tried 60 on my laptop.

It was better than expected, but due to the fact that 60 doesn't divide into 24, stuttering is evident. I'll try overclocking my panel to 72Hz and trying again, maybe.

NextGenUber - August 22, 2014, 7:22 pm

Hmm, I downloaded everything I needed and when I try running it it says "waiting for ffdshow video". (It says this when I hover over its icon in the bottom right corner of my screen)

:/

Everyone's replacing ZnT for Zankyou no Terror :(
What's happening.. zero no tsukaima.

Could also try 48 FPS, don't know if you've seen the Hobbit movies but they are actually made in 48 FPS and looks great (imo).

I tried overclocking my panel to 72Hz. Everything now just looks un-natural since frame pacing isn't constant in anime.

In?sane? - August 23, 2014, 6:27 am

Aww, well i couldn't imagine anything over 60 looking to good, i mean even 60 FPS looks pretty weird in some scenes etc.

72Hz actually looks better than 60 without SVP due to the fact that the frames are mapped 1:3 on screen instead of interpolating it to 1:2.5.

In?sane? - August 23, 2014, 7:03 am

Oh yeah, true that. Don't feel like overclocking my screen though because last time it completely spasmed out so i'm to scared.

Dafy dak - August 23, 2014, 10:09 am

lol watching dragon ball z this way would end up in gay porn.

?Tet? - August 23, 2014, 10:15 am

This is actually an awesome Program thank you very much I didn't think Tokyo Ghoul could get any better.

In?sane? - August 23, 2014, 10:57 am

Don't think a change of FPS would magically turn anything into gay porn.

(Aug 23, 2014 10:15 AM)?Tet? Wrote: [\[CITE\]](#) This is actually an awesome Program thank you very much I didn't think Tokyo Ghoul could get any better.

No problems, glad you like it.

AMAVI - August 23, 2014, 11:00 am

Thanks man, now everytime i watch shit on my PC its 60 FPS :)

zyvox - August 27, 2014, 7:36 am

Am I doing something wrong? By the looks of it the guy in the video got it right simply by installing the SVP program. I use potplayer aswell, however it remains at 24fps.

In?sane? - August 27, 2014, 7:41 am

I'm not sure, you restarted potplayer after you installed SVP yeah?

zyvox - August 27, 2014, 8:03 am

I actually installed SVP a few days ago, but didn't test it then. So I tried with VLC player now and

then downloaded potplayer to try. I looked it up on their wiki and I'm supposed to add a filter "ffshow...something" in the player however it isn't listed there as it should (yes I installed the package).

I tried with MPC-HC right now while writing this, and it worked here. Looks pretty cool in 60fps tbh, thanks for the share.
