Great product, great coder, wonderful support. This dude spent over 2 hours solving my issues that was atually my system fault.... something that was almost unrelated to him, simply because i bought his product.

He was calm, friendly and was answering every of my questions with ease, like we have been friends a long time.

Above all, his logger is "tha bomb" completely FUD. Works so perfectly, just the way anybody, me especially will want it. Full of features(meaningful) that work unlike many out there that got uncountable features that do not work

First of all, I think you should go home to your English teacher. Go learn how to write good English....atleast "Communicable English". As well, learn how to use your tool especially a simple and very user friendly keylogger as Knight logger.

After that, you may come back to point fingers and cry wolf?

Oh yeah, I think I can almost make out that he was trying to say that Knight logger was not FUD.

Check this out>>>>>[NOT FUD\(??\)?](#)

No, you dont need a domain

Not really, but, if you want to get longer fud times, a crypter is suggested.

Setup it and use it.
