Thread: [\[TUT\]How to find peoples IP's on Xbox live](#)

**Shiroe** - August 26, 2014, 2:35 am

Well good day HF! Today we will finding out how to pick up IP's on Xbox live. Please note before we begin please note that what you do with the IP's is none of my concern.

Let's begin

Step 1: You're going to need to download Cain and Abel here: <http://www.oxid.it/cain.html>

Step 2: Once downloaded make sure your Xbox is connected to the same network as your PC and it will only work on wifi.

Step 3: When installing make sure at the end you install the driver that comes with it.

Step 4: Open up the program and go to the sniffer tab

Step 5: Click the + button and find your router and select the router and go to the APR tab.

Step 6: Click the Start/Stop AFR button and then click the + button. A window will display. On the left click the IP of YOUR router.

Step 7: A few choices will then appear on the right, click the IP address of your Xbox. Then click OK, and an Idle Network will appear.

Step 8: Select the Idle network and click the Poison button. A list of IP's will appear below.

Notes:

1. If you are DoSing the IP that has 65 at the start is Microsoft IP
2. Please understand if you are caught doing this you can not blame me
3. If you need any help PM me and I will guide you through.
4. If you are playing CoD the person with the most packets is host
5. The port for Xbox live is 80

Please post below what you think -RveIL ?

**Blue Spy** - August 26, 2014, 2:48 am

Nice tut, would you be able to make a tut on how to sniff IP's through a VPN?

**Shiroe** - August 26, 2014, 2:52 am

Well maybe I don't think you can really do that I will do some research

**Shiroe** - August 27, 2014, 6:31 pm

Still works guys come and check it out

**SL x TnT** - August 27, 2014, 6:40 pm

Until they decide to not give other player's IPs out for voice chat, this will always work. A few things.

Half-routing:  
Rescan for your Xbox. Your Xbox's IP changed.

"it will only work on wifi"  
I'd recommend doing this over ethernet. Wifi can cause random lag spikes, if you're poisoning in game.  
You're missing this step ...  
Configure -> Select correct adapter

"2.Please understand if you are caught doing this you can not blame me"  
If you do this on your own network, you can't be caught sniffing your own packets. IPs are public knowledge. Sniffing them is not illegal. Now ... if you are trying to (D)DoS the IP, that's illegal.

"4.If you are playing CoD the person with the most packets is host"  
Not entirely true. Newer Cods (BO2+) mainly have dedicated servers.  
209.170.x.x = Cod Server  
65.55.42.x = XBL Server  
108.61.x.x = Cod Dedicated Server

"5.The port for xbox live is 80"  
No, the default port for xbox live 3074. If that's closed, it'll attempt to use others. I've seen 31774 used when I block 3074.

Now you should add a tutorial on how to force host, clear pregame lobbies, and fully clear in-game lobbies on CoD (without kicking yourself out). I'm not even sure if anyone else has figured out that last one, but that might be a good thing.

You should also add other programs other than Cain and Abel. There are many ways to pull IPs without an mitm attack.

**Freaky** - August 27, 2014, 6:42 pm

You probably should have posted this in the Xbox section as nobody really looks in this section for Xbox related tutorials.

However thanks for sharing this OP, I'm sure it'll help out some newer members.

**Accessory** - August 27, 2014, 10:48 pm

Um who doesn't know how to do this? lmao. Nice tut though op.

**SL x TnT** - August 27, 2014, 11:07 pm

(Aug 27, 2014 10:45 PM)?RveiL? Wrote: [\[CITE\]](#) Wrong i know for a fact the port has change to 80 when DoSing

A port only matters for a (D)DoS attack when it's a specific attack / making the traffic look real (bypassing DDoS protection). If you're attempting to win by flooding them, you can hit port 2341 for all that matters. If you're skeptical about that, I can record my friend hitting me offline instantly using a random port.

Honestly, it doesn't matter. Most home connections will not have an open port.

"Port 3074 is closed on 73.x.x.x." I'm on xbl.

"Port 80 is closed on 73.x.x.x"

Xbox Live uses

Port 3074 UDP / TCP

Port 80 UDP / TCP

Watch the packets, and you'll notice that 3074 is the main port.

**SIM-2090815** - August 28, 2014, 10:03 am

"5.The port for xbox live is 80"

No its not, 80 is the home connection ?

It is in fact 3074 ?

**SL x TnT** - August 28, 2014, 12:32 pm

Port 80 is the HTTP protocol (default). It'll be closed on your home router, unless you know a little bit about what you're doing.

Try this:

<https://hackforums.net:80>

Your browser will remove the :80. If you had a webserver on your computer with a different port, you could access it like localhost:8080. 8080 is common alternative to port 80, but it could be any unused port that you configure.

Ports 0-1023 are reserved well known ports

Ports 49152–65535 are for private use.

Some common ports, and what they're used for. You can change them, but these are their defaults.

**ErrorGTNotFound** - August 28, 2014, 1:03 pm

Nice tut, thanks for this mate appreciate it.

**Narcissistic Behaviors** - August 28, 2014, 1:07 pm

Thank you for knowing what you're talking about.

**WeightlessMods** - August 28, 2014, 1:39 pm

No matter how many people tell this kid its 3074 and not 80. He still isn't going to listen.. Point is, we all know the main port for xbox :P

**cincythunder2** - July 19, 2016, 9:14 am

nice tut op, clutch af lol
