Thread: [\[Suggestion\] Splitting the Cryptography section in two | Hash Cracking & File crypt](#)

Niely - August 26, 2014, 9:07 am

Hello

Well.

In the [Cryptography section](#) you have two kind of threads:

- 1) Hash cracking
- 2) vb.NET made crypters

Of course, those differ a lot.

I personally want to learn and get more into cryptography but that's hard because the whole Cryptography section is filled with:

"[Survey] G3t my Pr0 FUD Cr1pter - vb.NET"

Not that there is anything wrong with those programs/threads, but it's still annoying for people who want to focus on real hashing and real cryptography.

So, maybe we could make a sub-section, in a sub-section and split it in:

- 1) Hashing and Cryptography methods/cracking
 - 2) File crypting
- (Just examples)

Where the first one is for hashing etc and the second one for those crypters.

This way people who want to get a crypter can just go to the File Crypting section and the people who want hashes cracked/want to learn real Cryptography can visit the hashing section. ?

Again, I'm not saying that those free vb.NET crypters are bad, some of them are quality and are pretty useful as well (If you got Windows... ?), They're just a bit annoying because you don't know which threads are worth to check + the real learnful hash-cracking threads get to the second, third, or even fourth page.

Not will it only help people to find interesting threads, but it'll also help people who want a hash cracked to get a reply earlier. Or just a reply over all.

I often see threads about hash-cracking/some asking for hash-cracking support disappear to the second page with null replies, so it will also help experienced people to provide support with hash-cracking (Earlier + easier see which threads goes about hash-cracking on first page, instead of third or fourth). ;)

Anyway,
Just an idea. :)

Thanks for reading,
Niely
